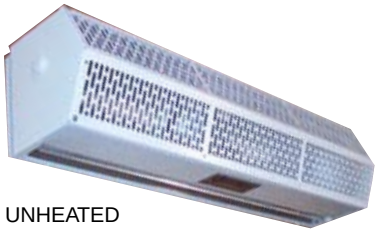
PROTECTION UP TO 8'

BASIC



UNHEATED

- 8½" high x 8" deep
- Single or variable speed
- White powder coated or stainless steel cabinet
- Quiet operation

for outdoor use
single speed unheated models only

E-ZONE AIR DOOR
Made in the USA

DELUXE

UNHEATED, ELECTRIC, STEAM or HOT WATER HEAT

- 7½" high x 13½" deep
- 10-speed digital programmable controller
- Satin anodized aluminum exterior (natural or bronze)
- Stainless or custom color

MAXAIR AIR DOOR
Made in the USA

ELEGANT

UNHEATED or ELECTRIC HEAT

- 11" high x 24" deep
- Three speed
- White powder coated finish
- Custom colors available

AURA AIR DOOR
Made in the USA

PROTECTION UP TO 10'

BASIC

UNHEATED or ELECTRIC HEAT

- 14¼" high x 13" deep
- Single or three speed
- White aluminum or stainless steel housing

for outdoor use
single speed unheated models only

STAR AIR DOOR
Made in the USA

DELUXE

UNHEATED, ELECTRIC, STEAM or HOT WATER HEAT

- 12¼" high x 22" deep
- Three-speed
- Satin anodized aluminum exterior (natural or bronze)
- Stainless or custom color

for outdoor use
unheated models only

MARK AIR DOOR
Made in the USA

RECESS MOUNTED

UNHEATED, ELECTRIC, STEAM or HOT WATER HEAT

- 15" high x 26" deep
- Factory installed digital programmable controller
- White aluminum bottom access panel
- Powder coated inlet screen

IN-CEILING AIR DOOR
Made in the USA

Berner International Corporation New Castle, PA 16101 / USA / Telephone (724) 658-3551 / FAX (724) 652-0682 / www.berner.com / airdoors@berner.com

PROTECTION UP TO 12’

UNHEATED, ELECTRIC, STEAM,
HOT WATER or INDIRECT GAS HEAT

- 15” high x 18” deep
- Single speed
- Gray powder coated finish with aluminum inlet screen
- 1/2 hp motors
- Stainless or custom colors

for outdoor use unheated models only

VSA
AIR DOOR
Made in the USA

PROTECTION UP TO 14’

UNHEATED, ELECTRIC, STEAM,
HOT WATER or INDIRECT GAS HEAT

- 15” high x 18” deep
- Single speed
- Gray powder coated finish with aluminum inlet screen
- 1 hp motors
- Stainless or custom colors

for outdoor use unheated models only

VSB
AIR DOOR
Made in the USA

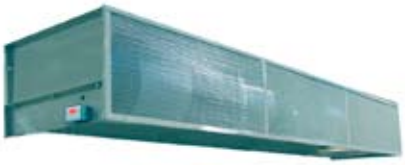
PROTECTION UP TO 16’

UNHEATED, ELECTRIC, STEAM, HOT WATER
INDIRECT GAS or DIRECT GAS HEAT

- 21” high x 32¼” deep
- Single speed
- Gray powder coated finish
- Split cabinet construction
- CFA - Direct Drive
- CFX - Belt Drive
- Stainless or custom colors

CFA/CFX
AIR DOOR
Made in the USA

PROTECTION UP TO 20’



UNHEATED, ELECTRIC, STEAM, HOT WATER
INDIRECT GAS or DIRECT GAS HEAT

- 21” high x 32¼” deep
- Single speed
- Gray powder coated finish
- Split cabinet construction
- CFC - Direct Drive
- CFY - Belt Drive
- Stainless or custom colors

CFC/CFY
AIR DOOR
Made in the USA

PROTECTION UP TO 30’

UNHEATED, STEAM, HOT WATER or DIRECT GAS HEAT

- 39” high x 30” deep
- Belt Drive
- 1750 RPM T.E.F.C motor
- Gray powder coated finish
- Stainless or custom colors

EWD
AIR DOOR
Made in the USA

INSECT CONTROL

UNHEATED

- 33½” high x 30” deep
- Direct driven single-speed
- Gray powder coated finish

FS
AIR DOOR
Made in the USA

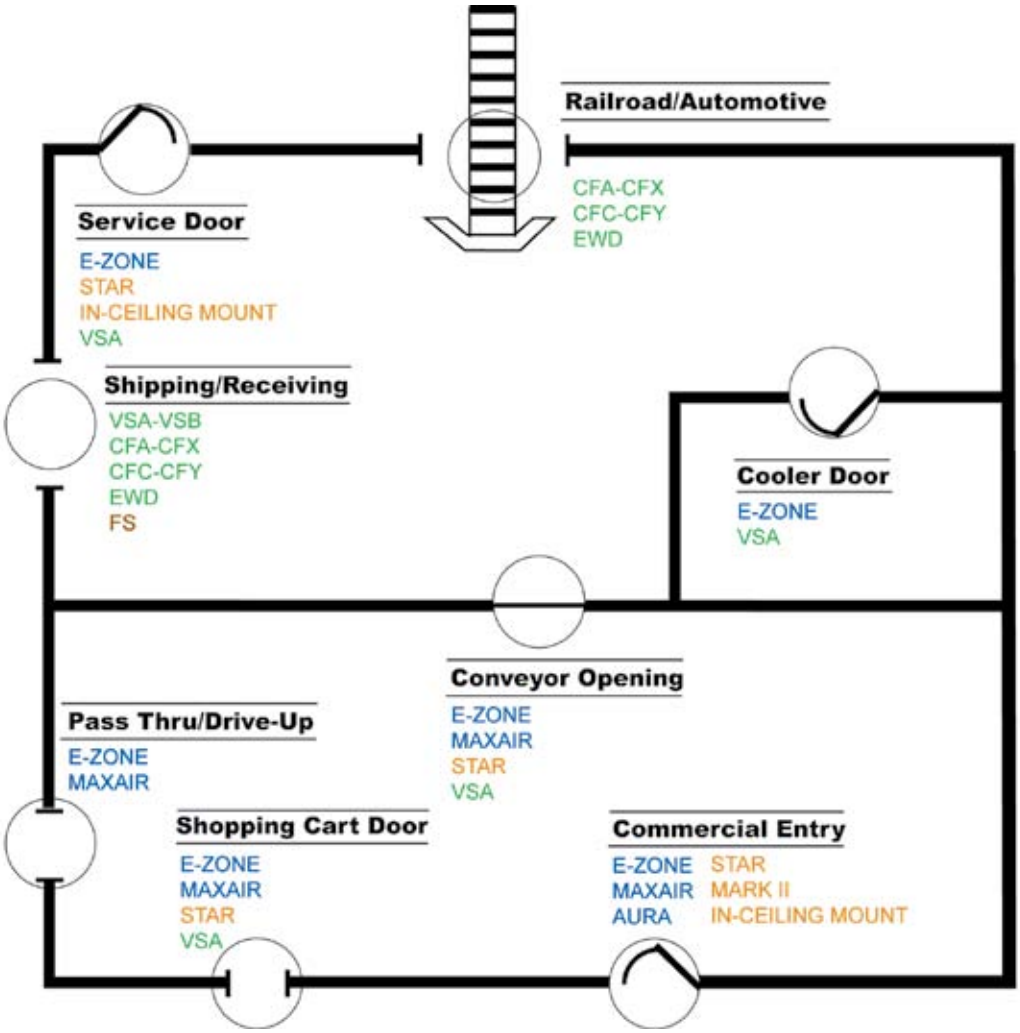
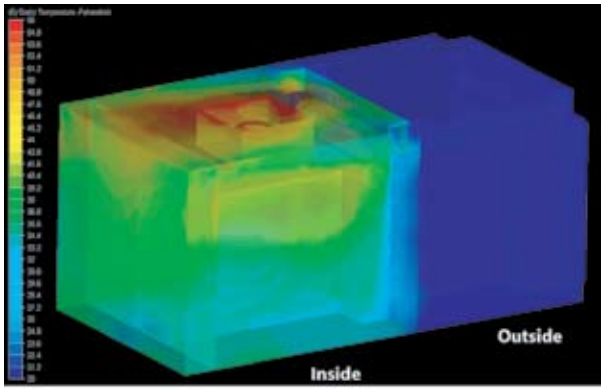
AIR DOOR APPLICATIONS

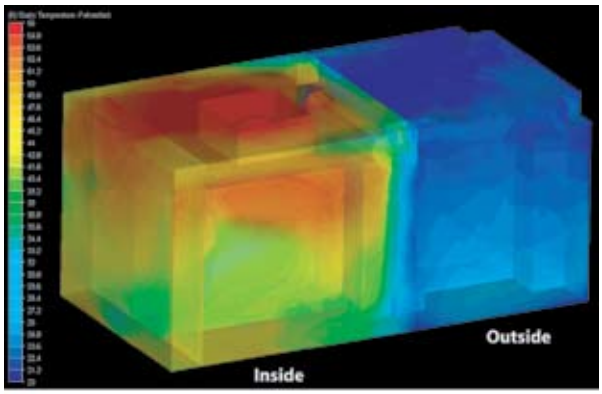
Berner offers the most complete line of air doors available. No matter what your door needs may be, Berner has models accommodating 30" - 192" wide openings including service doors, shipping doors, customer entry doors, drive-up windows and cooler doors.



AIR CURTAIN VS. VESTIBULE PERFORMANCE



VESTIBULE ONLY SIMULATION
Color Represents Temperature
Red = Warm Temperature, Blue = Cool Temperature



UNHEATED AIR CURTAIN ONLY SIMULATION
Color Represents Temperature
Red = Warm Temperature, Blue = Cool Temperature

Visit our website at www.berner.com to view our research summary.

OTHER QUALITY PRODUCTS AVAILABLE FROM BERNER INTERNATIONAL ...

AIR ENTRANCE SYSTEM

An aesthetically pleasing solution for high traffic entrance ways.

This innovative entrance provides a recirculated air seal, through concealed duct work, effectively creating a barrier between indoor and outdoor temperature conditions. Open access, safety and energy efficiency are created out of thin air with Berner Air Entrance System.

DIRECT GAS-FIRED DOOR HEATERS

Ideal solution for facilities with negative air pressure.

The Berner Gas-Fired Door Heater solves the problem of drafts or cold air from entering industrial buildings. Engineered for versatility, the door heater can be mounted at any angle between horizontal and vertical to satisfy most applications.

POSI-FLOW FABRIC AIR DIFFUSERS

Improve Air Dispersion

Posi-Flow Air Diffusion Ducts transfer and evenly distribute air to a room or an entire building in the most economical and efficient way. Tubing is used as a direct replacement for traditional sheet metal duct. Posi-Flow is installed in areas with open ceilings and is used for supply air only.

STRIP DOORS

The economical solution to energy control.

Berner Strip Doors are made of clear PVC material that retains its flexibility even in extremely cold conditions. These doors can be used to contain airborne contaminants, flying insects, and odors. They are an inexpensive way to hold back conditioned air for both customer and employee comfort.

SITE APPLICATION SURVEY

To determine the appropriate air curtain selection, please fill in the following information.

PROTECTION TYPE:

○ Climate Control ○ Insect Control ○ Both

OPENING TYPE:

○ Retail/Commercial Entry ○ Concessions
○ Drive Up Window ○ Dock/Delivery
○ Patio Opening ○ Conveyor
○ Cooler/Freezer ○ Service/Delivery
○ Interior Opening _____
○ Other _____

OPENING LOCATION:

○ EXTERIOR OPENING
  ○ Installed Indoors
  ○ Installed Outdoors
  Windstopping Protection:
  ○ 5-10 mph ○ 10-15 mph ○ Other ____ mph

○ INTERIOR OPENING
  (Little or no outside winds)
  Through draft (mph) or temperature difference between doorways ___ mph _____ °F

NEGATIVE PRESSURE:

○ NO
○ YES approximate negative _____ FPM

POSITION OF AIR CURTAIN:

○ Horizontal Mount (Top of Opening)
○ Vertical Mount (On one or both sides of opening)
Not recommended for commercial applications

TYPE OF MOUNTING:

○ Top Mount (Ceiling suspension rods)
○ Wall Mount ○ Other _____

VOLTAGE SELECTION:

○ 120/1/60 ○ 208/1/60 ○ 240/1/60
○ 208/3/60 ○ 240/3/60 ○ 480/3/60
○ 600/3/60 ○ Other

HEAT:

○ None ○ Hot Water
○ Electric ○ Indirect Gas Heat
○ Steam ○ Direct Gas Heat

Electric
Data Sheet

For Door Heights To 8' (environmental separation)

STANDARD FEATURES

- 7 1/2" high
- 1/5 hp direct driven motor(s)
- Factory installed "Intelliswitch" digital, programmable controller - *see features below*
- Aluminum air directional vanes
- Clear anodized aluminum exterior cabinet
- Wall mounting plate and 1/4" threaded inserts for top mounting
- Aluminum cross-flow blower wheels
- Two year parts warranty
- Crafted with Pride in the USA

HEATER FEATURES

- Helical coil with point suspension of elements for longer life
- Available single or three phase (not all models)
- Easily replaceable heating elements
- Galvanized steel frame
- Thermal protection against overheating

OPTIONAL FEATURES

- Stainless steel or custom color finish
- Reduced kW available (consult factory)

Data Sheet

For Door Heights To 8' (environmental separation)

STANDARD FEATURES
- 7 1/2" high
- 1/5 hp direct driven motor(s)
- Factory installed "Intelliswitch" digital, programmable controller - *see features below*
- Aluminum air directional vanes
- Clear anodized aluminum exterior cabinet
- Wall mounting plate and 1/4" threaded inserts for top mounting
- Aluminum cross-flow blower wheels
- Two year parts warranty
- Crafted with Pride in the USA

COIL FEATURES
- 16 gauge galvanized steel casing
- Factory mounted 5/8" O.D. copper steam/hot water coil
- Heavy wall seamless copper headers
- Aluminum fins
- Hand brazed joints
- Leak tested @ 325 psig dry nitrogen

OPTIONAL FEATURES
- Stainless steel or custom color finish

MARK II
Steam/Hot Water Heated
Data Sheet

For Door Heights To 10' (environmental separation)

STANDARD FEATURES
- 1/2 hp three speed motor(s)
- Galvanized steel blower wheels & housing
- Aluminum airfoil directional vanes
- Filter frame (filter sold separately)
- Factory installed fan speed selector switch
- Clear anodized aluminum exterior cabinet
- Wall mounting plate and 5/16" threaded inserts for top mounting
- Two year parts warranty
- Crafted with Pride in the USA

COIL FEATURES
- 16 gauge galvanized steel casing
- Factory mounted 5/8" O.D. copper steam/hot water coil
- Heavy wall seamless copper headers
- Aluminum fins
- Hand brazed joints
- Leak tested @ 325 psig dry nitrogen

OPTIONAL FEATURES
- Stainless steel or custom color finish

Performance based on 70° Entering Air Temperature (E.A.T.) and 5# Steam.
For other steam pressures - see chart on reverse side.
Berner recommends that maximum Leaving Air Temperature (L.A.T.) never exceed 120° F
Berner recommends coils should be supplied by a solenoid valve that energizes only when air curtain is on.

Ambient
Data Sheet

For Door Heights To 8' (environmental separation)

STANDARD FEATURES

- 1/2 hp three speed motor(s)
- Galvanized steel blower wheels & housing
- White aluminum airfoil directional vanes
- Hinged bottom panel for easy access to internal components
- Perforated steel intake grille
- White powder coated finish
- 16 gauge steel base frame and casing
- Five year parts warranty
- Crafted with Pride in the USA

OPTIONAL FEATURES

- Black Electro-static powder coated finish or custom color finish

Single Speed Electric Heated
Data Sheet

For Door Heights To 10' (environmental separation)

STANDARD FEATURES
- 3/4 hp motor(s)
- Factory installed fan/heat switch
- Galvanized steel blower wheels & housing
- Aluminum airfoil directional vanes
- Aluminum base frame
- White aluminum housing
- Keyhole slots in backplate for quick wall mounting
- Two year parts warranty
- Crafted with Pride in the USA

HEATER FEATURES
- Helical coil with point suspension of elements for longer life
- Available single or three phase
- Easily replaceable heating elements
- Galvanized steel frame
- Thermal protection against overheating

OPTIONAL FEATURES
- Stainless steel or custom color finish
- Reduced kW available (consult factory)

NOTES:

1. AIR CURTAIN MUST BE INSTALLED SO AIR STREAM IS NOT OBSTRUCTED WHEN DEFLECTED 20° TO EITHER SIDE OF ℄.
2. ELECTRICAL CONNECTIONS TO BE FLEXIBLE.
3. FIELD VERIFY DIMENSIONS.
4. ANCHORS TO SUPPORTING STRUCTURE BY OTHERS.
5. ADEQUACY OF SUPPORTING STRUCTURE IS TO BE VERIFIED BY A PROFESSIONAL STRUCTURAL ENGINEER.
6. OPTIONAL CONTROL PANEL AVAILABLE: LEFT HAND MOUNT, RIGHT HAND MOUNT, OR REMOTE. PLEASE SPECIFY.
7. DIMENSIONS IN INCHES [CENTIMETERS].

No.: DS-243
Date: October, 2011

BERNER™ INTERNATIONAL CORP.

VSA
Positive Indirect Gas Heated
Data Sheet

For Door Heights To 12' (environmental separation)

STANDARD FEATURES
- ½ hp single speed motor(s)
- High efficiency, low noise Pro-V Nozzle (patent pending)
- Galvanized steel blower wheels and housing
  Airfoil aluminum air directional vanes
- Powder coated finish with aluminum inlet screen
- 16 gauge aluminized steel cabinet
- ½" mounting holes (wall or top mounting)
- No field assembly required
- Duct transition with bottom access panels
- Two year parts warranty
- Crafted with Pride in the USA

OPTIONAL FEATURES
- Multi-speed motor(s) (consult factory)

HEATER FEATURES
- CSA approved
- Aluminzed steel heat exchanger
- Spark ignited pilot
- Power venter
- Prewired motor(s) & controls

Note: Separate 120/1/60 power supply is required for unit heaters.

OPTIONAL HEATER FEATURES
- Stainless steel heat exchanger
- Dry type transformer (120V power for heaters)

BERNER™ INTERNATIONAL CORP.

VSB
Positive Indirect Gas Heated
Data Sheet

For Door Heights To 14' (environmental separation)

STANDARD FEATURES
- 1 hp single speed motor(s)
- High efficiency, low noise Pro-V Nozzle (patent pending)
- Galvanized steel blower wheels and housing
  Airfoil aluminum air directional vanes
- Powder coated finish with aluminum inlet screen
- 16 gauge aluminized steel cabinet
- ½" mounting holes (wall or top mounting)
- No field assembly required
- Duct transition with bottom access panels
- Two year parts warranty
- Crafted with Pride in the USA

OPTIONAL FEATURES
- Multi-speed motor(s) (consult factory)

HEATER FEATURES
- CSA approved
- Aluminzed steel heat exchanger
- Spark ignited pilot
- Power venter
- Prewired motor(s) & controls

Note: Separate 120/1/60 power supply is required for unit heaters.

OPTIONAL HEATER FEATURES
- Stainless steel heat exchanger
- Dry type transformer (120V power for heaters)

Ambient
Data Sheet

For Door Heights To 14' (environmental separation) and 12' (insect control)

STANDARD FEATURES

- 1 hp single speed motor(s)
- High efficiency, low noise Pro-V Nozzle (patent pending)
- Galvanized steel blower wheels and housing Airfoil aluminum air directional vanes
- Powder coated finish with aluminum inlet screen
- 16 gauge aluminized steel cabinet
- ½" mounting holes (wall or top mounting)
- No field assembly required
- Five year parts warranty
- Crafted with Pride in the USA

OPTIONAL FEATURES

- Two-speed motor(s) (consult factory)

amca CERTIFIED RATINGS — AIR PERFORMANCE — AIR MOVEMENT AND CONTROL ASSOCIATION, INC. PRINTED IN THE UNITED STATES OF AMERICA

Berner International Corporation certifies that the air curtains shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and comply with the requirements of the AMCA Certified Ratings Program.
Rated data shown is for base (unheated) units.

The AMCA Certified Ratings Seal applies to airflow rate, average outlet velocity, outlet velocity uniformity, velocity projection and power rating at free delivery only.

Sound level measured 10' (3m) from the unit in free field:
1, 2, 3 & 4 motor(s): **63 dBA, dBA, dBA, dBA**
Sound data is not AMCA certified.

Berner reserves the right to alter specifications without prior notice.

Data Sheet

For Door Heights To 12' (environmental separation)

STANDARD FEATURES

- ½ hp single speed motor(s)
- Factory mounted control panel - 24 volt control
- High efficiency, low noise Pro-V Nozzle (patent pending)
- Galvanized steel blower wheels and housing
  Airfoil aluminum air directional vanes
- Powder coated finish with aluminum inlet screen
- 16 gauge aluminized steel cabinet
- ½" mounting holes (wall or top mounting)
- No field assembly required
- Two year parts warranty
- Crafted with Pride in the USA

HEATER FEATURES

- Helical coil with point suspension of elements
- Available single or three phase
- Galvanized steel frame
- Thermally protected against overheating

OPTIONAL FEATURES

- Reduced kW available (see sheet KW-237)
- ½ hp multi-speed motor(s) (consult factory)

VSA
Steam Heated
Data Sheet

For Door Heights To 12' (environmental separation)

STANDARD FEATURES

- ½ hp single speed motor(s)
- High efficiency, low noise Pro-V Nozzle (patent pending)
- Galvanized steel blower wheels and housing Airfoil aluminum air directional vanes
- Powder coated finish with aluminum inlet screen
- 16 gauge aluminized steel cabinet
- ½" mounting holes (wall or top mounting)
- No field assembly required
- Two year parts warranty
- Crafted with Pride in the USA

COIL FEATURES

- Factory mounted
- 16 gauge galvanized steel casing
- 5/8" O.D. seamless copper tubes
- Heavy wall seamless copper headers
- Aluminum fins
- Hand brazed joints
- Leak tested @minimum 325 psig dry nitrogen

OPTIONAL FEATURES

- ½ hp multi-speed motor(s) (consult factory)

VSB
Steam Heated
Data Sheet

For Door Heights To 14' (environmental separation)

STANDARD FEATURES

- 1 hp single speed motor(s)
- High efficiency, low noise Pro-V Nozzle (patent pending)
- Galvanized steel blower wheels and housing
  Airfoil aluminum air directional vanes
- Powder coated finish with aluminum inlet screen
- 16 gauge aluminized steel cabinet
- ½" mounting holes (wall or top mounting)
- No field assembly required
- Two year parts warranty
- Crafted with Pride in the USA

COIL FEATURES

- Factory mounted
- 16 gauge galvanized steel casing
- 5/8" O.D. seamless copper tubes
- Heavy wall seamless copper headers
- Aluminum fins
- Hand brazed joints
- Leak tested @minimum 325 psig dry nitrogen

OPTIONAL FEATURES

- Two-speed motor(s) (consult factory)

amca CERTIFIED RATINGS — AIR PERFORMANCE — AIR MOVEMENT AND CONTROL ASSOCIATION, INC. — PRINTED IN THE UNITED STATES OF AMERICA

Berner International Corporation certifies that the air curtains shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and comply with the requirements of the AMCA Certified Ratings Program.
Rated data shown is for base (unheated) units.

The AMCA Certified Ratings Seal applies to airflow rate, average outlet velocity, outlet velocity uniformity, velocity projection and power rating at free delivery only.
Models CFA1084A, CFA1108A, CFA1132A, CFA1156A, and CFA2180A are intended for door heights up to 14'.

Sound level measured 10' (3m) from the unit in free field: **68 dBA**

Sound data is not AMCA certified.

Berner reserves the right to alter specifications without prior notice.

Performance based on 70°F Entering Air Temperature (E.A.T.) and 5# Steam*

* For other steam pressures - see chart on reverse side.
Berner recommends that maximum Leaving Air Temperature (L.A.T.) never exceed 120°F.
All coils should be supplied by a solenoid valve that energizes coil only when air curtain is on.

BERNER™ INTERNATIONAL CORP.

CFA
Positive Indirect Gas Heated
Data Sheet

For Door Heights To 16' (environmental separation)

STANDARD FEATURES
- Direct drive T.E.A.O. motor(s)
- Galvanized steel blower wheels and housing
- Adjustable air discharge nozzle
- Fiberglass air diverters on fan discharge
- Gray powder coated finish
- Welded 14 gauge aluminized steel cabinet
- ½" mounting holes
- Duct transition with bottom access panels
- Two year parts warranty
- Crafted with Pride in the USA

HEATER FEATURES
- CSA approved
- Aluminzed steel heat exchanger
- Spark ignited pilot
- Power venter
- Prewired motor(s) & controls

NOTE: Separate 120/1/60 power supply is required for unit heater(s)

OPTIONAL FEATURES
- Stainless steel heat exchanger (consult factory)
- Dry type transformer - 120V power to heater(s)

BERNER™ INTERNATIONAL CORP.

CFX
Positive Indirect Gas Heated
Data Sheet

For Door Heights To 16' (environmental separation)

STANDARD FEATURES
- Belt drive T.E.F.C. motor(s)
- Galvanized steel blower wheels and housing
- Adjustable air discharge nozzle
- Fiberglass air diverters on fan discharge
- Gray powder coated finish
- Welded 14 gauge aluminized steel cabinet
- ½" mounting holes
- Duct transition with bottom access panels
- Two year parts warranty
- Crafted with Pride in the USA

HEATER FEATURES
- CSA approved
- Aluminzed steel heat exchanger
- Spark ignited pilot
- Power venter
- Prewired motor(s) & controls

NOTE: Separate 120/1/60 power supply is required for unit heater(s)

OPTIONAL FEATURES
- Stainless steel heat exchanger (consult factory)
- Dry type transformer - 120V power to heater(s)

Direct Gas Heated
Data Sheet

For Door Heights To 16' (environmental separation)

STANDARD FEATURES

- Direct drive T.E.A.O. motor(s)
- Galvanized steel blower wheels and housing
- Adjustable air discharge nozzle
- Fiberglass air diverters on fan discharge
- Gray powder coated finish
- Welded 14 gauge aluminized steel cabinet
- ½" mounting holes
- Tapered transition with access panels
- Two year parts warranty
- Crafted with Pride in the USA

HEATER FEATURES

- Steel cabinet with gray finish
- Adjustable profile plates
- ANSI, FM or IRI Gas Train
- Factory mounted wired control cabinet
- Modulating direct fired burner
- Spark ignited intermittent pilot

OPTIONAL FEATURES

- Filter section

CFX
Direct Gas Heated
Data Sheet

For Door Heights To 16' (environmental separation)

STANDARD FEATURES
- Belt drive T.E.F.C. motor(s)
- Galvanized steel blower wheels and housing
- Adjustable air discharge nozzle
- Fiberglass air diverters on fan discharge
- Gray powder coated finish
- Welded 14 gauge aluminized steel cabinet
- ½" mounting holes
- Tapered transition with access panels
- Two year parts warranty
- Crafted with Pride in the USA

HEATER FEATURES
- Steel cabinet with gray finish
- Adjustable profile plates
- ANSI, FM or IRI Gas Train
- Factory mounted wired control cabinet
- Modulating direct fired burner
- Spark ignited intermittent pilot

OPTIONAL FEATURES
- Filter section

Electric Heated
Data Sheet

For Door Heights To 16' (environmental separation)

STANDARD FEATURES

- Direct drive T.E.A.O. motor(s)
- Galvanized steel blower wheels and housing
- Adjustable air discharge nozzle
- Fiberglass air diverters on fan discharge
- Gray powder coated finish
- Welded 14 gauge aluminized steel cabinet
- ½" mounting holes
- Two year parts warranty
- Crafted with Pride in the USA

HEATER FEATURES

- 16 gauge galvanized steel casing
- Factory mounted heating coil(s)
- Power fusing
- Thermally protected-manual & auto reset
- Airflow switch
- Dual relay operation
- Left or right hand mount heater control panel

Steam Heated
Data Sheet

For Door Heights To 16' (environmental separation)

STANDARD FEATURES

- Direct drive T.E.A.O. motor(s)
- Galvanized steel blower wheels and housing
- Adjustable air discharge nozzle
- Fiberglass air diverters on fan discharge
- Gray powder coated finish
- Welded 14 gauge aluminized steel cabinet
- ½" mounting holes
- Two year parts warranty
- Crafted with Pride in the USA

COIL FEATURES

- 16 gauge galvanized steel casing
- 5/8" O.D. seamless copper tubes
- Heavy wall seamless copper headers
- Aluminum fins
- Leak tested @325 psig dry nitrogen
- 1 1/2" MPT supply and return

BERNER™ INTERNATIONAL CORP.

CFX
Steam Heated
Data Sheet

For Door Heights To 16' (environmental separation)

STANDARD FEATURES

- Belt drive T.E.F.C. motor(s)
- Galvanized steel blower wheels and housing
- Adjustable air discharge nozzle
- Fiberglass air diverters on fan discharge
- Gray powder coated finish
- Welded 14 gauge aluminized steel cabinet
- ½" mounting holes
- Two year parts warranty
- Crafted with Pride in the USA

COIL FEATURES

- 16 gauge galvanized steel casing
- 5/8" O.D. seamless copper tubes
- Heavy wall seamless copper headers
- Aluminum fins
- Leak tested @325 psig dry nitrogen
- 1 1/2" MPT supply and return

Data Sheet

For Door Heights To 20' (environmental separation) and 18' (insect control)

STANDARD FEATURES

- Direct drive T.E.A.O. motor(s)
- Galvanized steel blower wheels and housing
- Adjustable air discharge nozzle
- Fiberglass air diverters on fan discharge
- Gray powder coated finish
- Welded 14 gauge aluminized steel cabinet
- ½" mounting holes
- Five year parts warranty
- Crafted with Pride in the USA

amca CERTIFIED RATINGS — AIR PERFORMANCE — AIR MOVEMENT AND CONTROL ASSOCIATION, INC. — PRINTED IN THE UNITED STATES OF AMERICA

Berner International Corporation certifies that the air curtains shown herein are licensed to bear the AMCA Seal. The ratings shown are based on tests and procedures performed in accordance with AMCA Publication 211 and comply with the requirements of the AMCA Certified Ratings Program.
Rated data shown is for base (unheated) units.

The AMCA Certified Ratings Seal applies to airflow rate, average outlet velocity, outlet velocity uniformity, velocity projection and power rating at free delivery only.
Models CFC1084A, CFC1108A, CFC1132A, CFC1156A, and CFC1180A are intended for door heights up to 18'.

VELOCITY PROJECTION: *Model CFC1060*			
Distance from Nozzle (ft)	3	10	17
Core Velocity (fpm)	3027	1967	1500

Sound level measured 10' (3m) from the unit in free field: **73 dBA**

Sound data is not AMCA certified.

Berner reserves the right to alter specifications without prior notice.

CFC
Positive Indirect Gas Heated
Data Sheet

For Door Heights To 20' (environmental separation)

STANDARD FEATURES
- Direct drive T.E.A.O. motor(s)
- Galvanized steel blower wheels and housing
- Adjustable air discharge nozzle
- Fiberglass air diverters on fan discharge
- Gray powder coated finish
- Welded 14 gauge aluminized steel cabinet
- ½" mounting holes
- Duct transition with bottom access panels
- Two year parts warranty
- Crafted with Pride in the USA

HEATER FEATURES
- CSA approved
- Aluminzed steel heat exchanger
- Spark ignited pilot
- Power venter
- Prewired motor(s) & controls

TITLE: BERNER
MODEL CFC AIR CURTAIN
INDIRECT GAS FIRED - THREE HEATER SYSTEM

BERNER INTERNATIONAL CORP.
NEW CASTLE,PA.

No.: DS-125Y
Date: October, 2011

BERNER™ INTERNATIONAL CORP.

CFY
Positive Indirect Gas Heated
Data Sheet

For Door Heights To 20' (environmental separation)

STANDARD FEATURES
- Belt drive T.E.F.C. motor(s)
- Galvanized steel blower wheels and housing
- Adjustable air discharge nozzle
- Fiberglass air diverters on fan discharge
- Gray powder coated finish
- Welded 14 gauge aluminized steel cabinet
- ½" mounting holes
- Duct transition with bottom access panels
- Two year parts warranty
- Crafted with Pride in the USA

HEATER FEATURES
- CSA approved
- Aluminzed steel heat exchanger
- Spark ignited pilot
- Power venter
- Prewired motor(s) & controls

TITLE: BERNER
MODEL CFY AIR CURTAIN
INDIRECT GAS FIRED - THREE HEATER SYSTEM

BERNER INTERNATIONAL CORP.
NEW CASTLE,PA.

No.: DS-324
Date: October, 2011

BERNER™ INTERNATIONAL CORP.

CFC
Direct Gas Heated
Data Sheet

For Door Heights To 20' (environmental separation)

STANDARD FEATURES
- Direct drive T.E.A.O. motor(s)
- Galvanized steel blower wheels and housing
- Adjustable air discharge nozzle
- Fiberglass air diverters on fan discharge
- Gray powder coated finish
- Welded 14 gauge aluminized steel cabinet
- ½" mounting holes
- Tapered transition with access panels
- Two year parts warranty
- Crafted with Pride in the USA

HEATER FEATURES
- Steel cabinet with gray finish
- Adjustable profile plates
- ANSI, FM or IRI Gas Train
- Factory mounted wired control cabinet
- Modulating direct fired burner
- Spark ignited intermittent pilot

OPTIONAL FEATURES
- Filter section

NOTES:

1. AIR CURTAIN MUST BE INSTALLED SO AIR STREAM IS NOT OBSTRUCTED WHEN DEFLECTED 20° TO EITHER SIDE OF ℄.
2. ELECTRICAL CONNECTIONS TO BE FLEXIBLE.
3. FIELD VERIFY DIMENSIONS.
4. ANCHORS TO SUPPORTING STRUCTURE BY OTHERS.
5. ADEQUACY OF SUPPORTING STRUCTURE IS TO BE VERIFIED BY A PROFESSIONAL STRUCTURAL ENGINEER.
6. OPTIONAL CONTROL PANEL AVAILABLE: LEFT HAND MOUNT, RIGHT HAND MOUNT, OR REMOTE. PLEASE SPECIFY.
7. DIMENSIONS IN INCHES [CENTIMETERS].

CFC
Electric Heated
Data Sheet

For Door Heights To 20' (environmental separation)

STANDARD FEATURES

- Direct drive T.E.A.O. motor(s)
- Galvanized steel blower wheels and housing
- Adjustable air discharge nozzle
- Fiberglass air diverters on fan discharge
- Gray powder coated finish
- Welded 14 gauge aluminized steel cabinet
- ½" mounting holes
- Two year parts warranty
- Crafted with Pride in the USA

HEATER FEATURES

- 16 gauge galvanized steel casing
- Factory mounted heating coil(s)
- Power fusing
- Thermally protected-manual & auto reset
- Airflow switch
- Dual relay operation
- Left or right hand mount heater control panel

CFY
Steam Heated
Data Sheet

For Door Heights To 20' (environmental separation)

STANDARD FEATURES

- Belt drive T.E.F.C. motor(s)
- Galvanized steel blower wheels and housing
- Adjustable air discharge nozzle
- Fiberglass air diverters on fan discharge
- Gray powder coated finish
- Welded 14 gauge aluminized steel cabinet
- ½" mounting holes
- Two year parts warranty
- Crafted with Pride in the USA

COIL FEATURES

- 16 gauge galvanized steel casing
- 5/8" O.D. seamless copper tubes
- Heavy wall seamless copper headers
- Aluminum fins
- Hand brazed joints
- Leak tested @325 psig dry nitrogen

Performance based on 5# Steam

* For other steam pressures - see chart on reverse side.
Berner recommends that maximum Leaving Air Temperature (L.A.T.) never exceed 120°F.
All coils should be supplied by a solenoid valve that energizes coil only when air curtain is on.

CONSTANTS FOR OBTAINING TEMPERATURE RISE AT VARIOUS STEAM PRESSURES & INLET TEMPERATURES

Data Sheet

For Door Heights To 30' (environmental separation)

STANDARD FEATURES

- 1750 RPM T.E.F.C. motor (front or top mount)
- Galvanized steel blower wheels and housing
- Belt drive fans
- Gray powder coated finish
- Welded 14 gauge aluminized steel cabinet
- 7/8" mounting holes
- Two year parts warranty
- Crafted with Pride in the USA

COIL FEATURES

- 16 gauge galvanized steel casing
- 5/8" O.D. seamless copper tubes
- Heavy wall seamless copper headers
- Aluminum fins
- Leak tested @325 psig dry nitrogen

MADE IN U.S.A.

BERNER™ INTERNATIONAL CORP.

For Door Heights To 30' (environmental separation)

STANDARD FEATURES

- 1750 RPM T.E.F.C. motor (front or top mount)
- Galvanized steel blower wheels and housing
- Belt drive fans
- Gray powder coated finish
- Welded 14 gauge aluminized steel cabinet
- 7/8" mounting holes
- Two year parts warranty
- Crafted with Pride in the USA

COIL FEATURES

- 16 gauge galvanized steel casing
- 5/8" O.D. seamless copper tubes
- Heavy wall seamless copper headers
- Aluminum fins
- Leak tested @325 psig dry nitrogen
- 2" MPT supply and return

Performance based on 70°F Entering Air Temperature (E.A.T.) and 5# Steam*

* For other steam pressures - see chart on reverse side.
Berner recommends that maximum Leaving Air Temperature (L.A.T.) never exceed 120°F.
All coils should be supplied by a solenoid valve that energizes coil only when air curtain is on.

Berner International Corporation New Castle, PA 16101 / USA / Telephone (724) 658-3551 / FAX (724) 652-0682 / www.berner.com / airdoors@berner.com

Direct Gas Fired
Data Sheet

For Door Heights To 30' (environmental separation)

STANDARD FEATURES

- 1750 RPM T.E.F.C. motor (front or top mount)
- Galvanized steel blower wheels and housing
- Belt drive fans
- Gray powder coated finish
- Welded 14 gauge aluminized steel cabinet
- 7/8" mounting holes
- Two year parts warranty
- Crafted with Pride in the USA

HEATER FEATURES

- Steel cabinet with gray finish
- Adjustable profile plates
- FM/IRI gas train
- Factory mounted wired heater control cabinet
- Modulating direct fired burner
- Spark ignited intermittent pilot

Installation & Maintenance Instructions

TABLE OF CONTENTS

I. UNCRATING 2
II. MOUNTING INSTRUCTIONS 2
III. WALL MOUNTING 3
IV. ELECTRICAL CONNECTIONS 4
V. OPERATION AND CONTROLS 4
VI. AIRFLOW ADJUSTMENTS 4
VII. MAINTENANCE AND CLEANING 4
VIII. SERVICE 5

Your new Drive-Thru air door (sometimes referred to as an air curtain) , properly installed, maintained and operated, will keep fumes out of your restaurant, increase employee comfort, and save energy.

WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

A. Use this unit only in the manner intended by the manufacturer. If you have any questions, contact the manufacturer.
B. Before servicing or cleaning unit, switch power off at service panel and lock the service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.
C. Installation work and electrical wiring must be done by qualified person(s) in accordance with all applicable codes and standards, including fire-rated construction.
D. Sufficient air is needed for proper combustion and exhausting of gases through the flue (chimney) of fuel burning equipment to prevent back drafting. Follow the heating equipment manufacturer's guideline and safety standards such as those published by the National Fire Protection Association (NFPA), and the American Society for Heating, Refrigeration and Air Conditioning Engineers (ASHRAE), and local code authorities.
E. When cutting or drilling into wall or ceiling, do not damage electrical wiring and other hidden utilities.

I. UNCRATING

Carefully examine the carton(s) for damage before opening. If the carton is damaged, immediately notify shipping company. If the unit(s) were shipped on wooden skids, remove protective wood and banding straps securing the carton(s) to the skid. Open the carton(s) and remove all protective packaging. Immediately verify that the electrical rating nameplate located on the cover matches electrical power supply available. Retain the shipping carton(s) until the unit(s) is installed and properly operating.

ACCESSORIES: If the unit(s) was ordered with optional electrical accessories, the accessories may be found in the carton containing the unit or in a separate carton(s) accompanying the unit(s). Check all of the cartons/skids for accessories before discarding.

II. MOUNTING INSTRUCTIONS

(General Notes for All Mounting Configurations)

INDOOR MOUNTING ONLY!

Environmental/Insect/Dust & Fume Control

The Drive-Thru air door is designed to be an effective barrier against cold drafts in the winter and hot air in the summer. To achieve optimum protection, the unit should be mounted on the inside of the building, as close to the top of the window opening as possible. To ensure peak performance, keep the air stream free of obstructions. The unit is equipped with mounting brackets to ensure proper mounting in most applications.

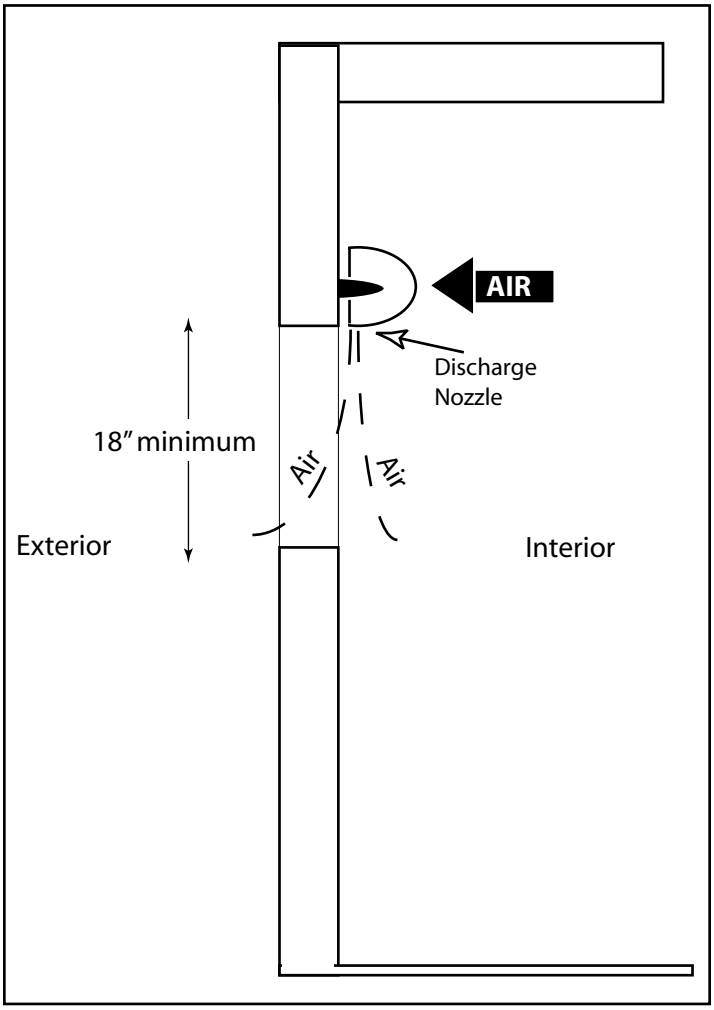
The air door will not perform properly if negative air pressure exists in the building. Under these conditions, a means for makeup air to the building must be provided so that the air pressure on both sides of the opening is in balance.

Before mounting the unit, check the supporting structure to verify that it has sufficient load-carrying capacity to support the weight of the unit(s). The mounting hardware should be capable of supporting a minimum of three (3) times the weight of the unit (See Table 1).

MODEL	NET WEIGHT AMBIENT (lbs)	NET WEIGHT ELECTRIC (lbs)
DTU1018	11	12
DTU1026	16	17

TABLE 1

A. When determining the mounting location for the unit(s), make sure that nothing interferes with the curtain of air developed when the discharge vanes are directed from 0º to 20º toward the drive-thru window opening. If the air stream strikes any obstruction (the top edge of the window, a window opening device, etc.), the effectiveness of the unit will be greatly reduced (See Drawing 1).



DRAWING 1

B. For optimum performance, the bottom of the unit (discharge nozzle) should be no more than 1" above the top of the drive-thru window opening with the unit mounted flush to the wall. If the unit must be mounted higher, it must be spaced out from the wall 3/8" for every inch the unit is above the drive-thru window opening.

C. Electric heated units shall:

1. Have a minimum clearance of at least 1" between the sides and top of the unit and any combustible material.
2. Have a minimum clearance of at least 18" between the bottom of the unit and the counter.

III. WALL MOUNTING

The Drive-Thru Unit air door is shipped with a variety of wall mounting options. Included in standard orders are standard brackets (See Figure 1) and spanning legs (See Figure 2). Adjustable brackets (See Figure 3) available by special order.

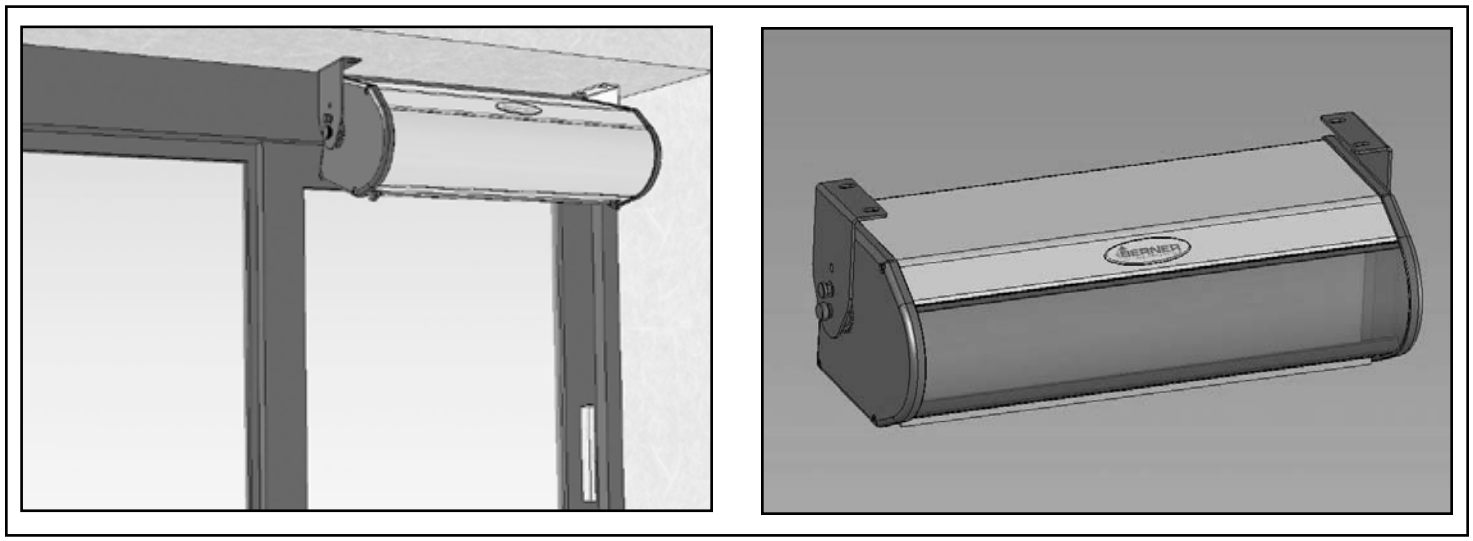


FIGURE 1 -Standard Brackets

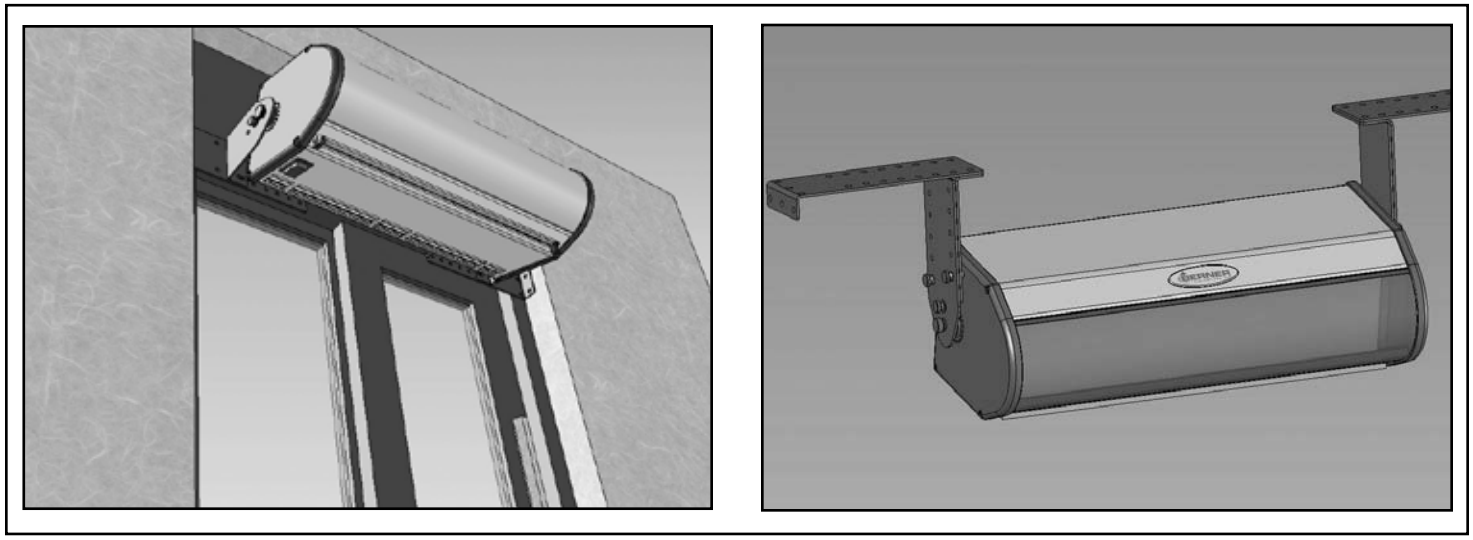

FIGURE 2 -Spanning Brackets (works with both standard and adjustable extension brackets)

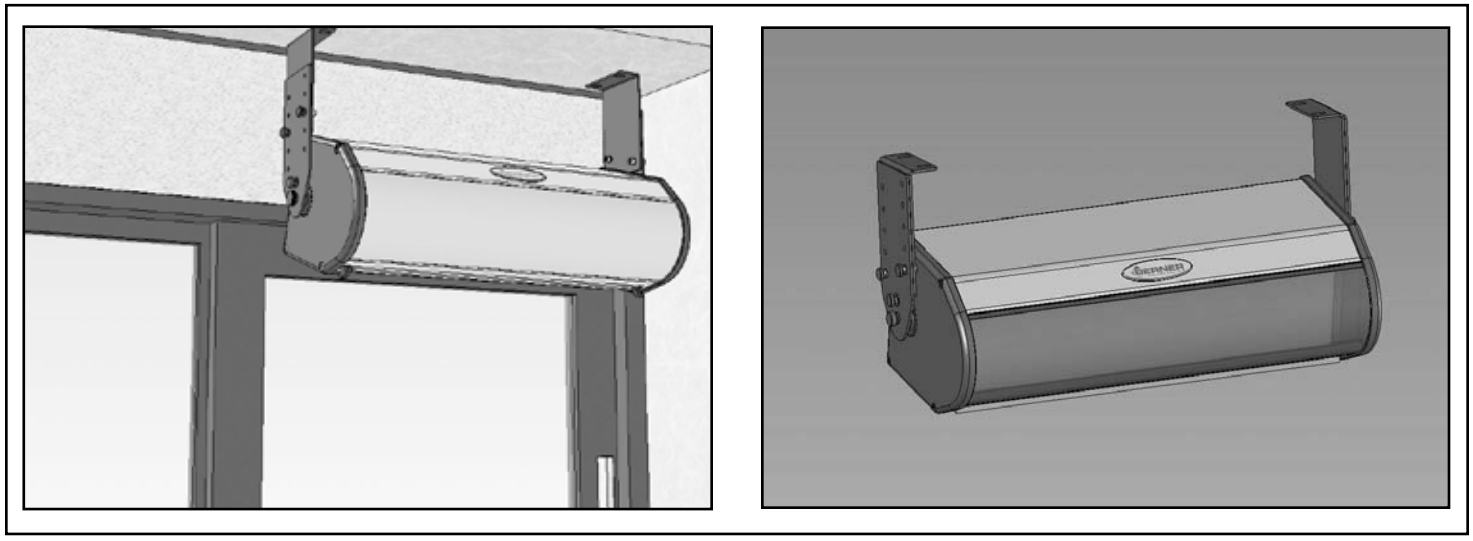

FIGURE 3 -Adjustable Extension Brackets (optional, must be ordered separately by special order)

Motor Voltages/Amp Draws

Phase	1	1	1	1
Hertz	60	60	60	60
Amps per unit	1.6	18.3	2.2	18.9
kW	0	2	0	2

TABLE 2

IV. ELECTRICAL CONNECTIONS

All electrical wiring and connections MUST be performed by qualified personnel in accordance with the National Electrical Code ANSI/NFPA No. 70 (latest edition) or, in Canada, the Canadian Electrical Code, Part 1-C.S.A. Standard C22.1, and local codes and regulations.

A. Check the rating nameplate on the top of the unit for supply voltage and current requirements (See Figure 2). Unheated units may be plugged into any 15 or 20 amp receptacle. **Heated units require a dedicated 20 amp receptacle and circuit.** A disconnect switch for each branch circuit is a required part of this installation (See Table 2).

B. All field wiring must be copper with a minimum insulation of 60°C within approved conduit. If any of the wire supplied with the unit must be replaced, it must be replaced with copper wiring with a minimum insulation of 90°C.

V. OPERATION AND CONTROLS

A. The unheated Drive-Thru Unit air door operates with a two position on-off switch.

B. The heated Drive-Thru Unit air door operates with a three position fan-off-heat switch.

VI. AIR FLOW ADJUSTMENTS

A. With the air door operating and the door in its full open position, check to see that nothing is obstructing the air flow at the discharge nozzle vanes.

B. Find the air stream split location. Hold a handkerchief or tissue, by its corners, approximately 4" above the counter. Gently move the handkerchief back and forth in the doorway. Make sure the air is being directed to both the inside and the outside. The split location is indicated where the handkerchief is vertical with minimal or no fluttering.

C. Rotate the air curtain by adjusting its position in the mounting bracket so the split location is approximately 2" outside the window (See Drawing 1).

VII. MAINTENANCE AND CLEANING

CAUTION: ELECTRIC SHOCK HAZARD:

Disconnect power when servicing unit.

More than one disconnect may be required to de-energize unit.

Keep your air door operating at peak efficiency by cleaning the blower wheels, motor(s) and intake grille. Build up of dust on the blower wheels can cause vibration, noise and excessive wear on the motor bearings. The frequency of cleaning will depend on the environment where the unit is operating.

Dirty, dusty or greasy environments could require a cleaning schedule of once every two months. If the environment is not that dirty, the unit(s) should be scheduled for cleaning a minimum of once every (6) months.

To remove the filter:

This unit is equipped with a "No Tool" filter removal. Simply, pull the (2) black tabs, located underneath the intake grille, outward. This action releases the filter which then can be pulled downward out of the unit (See Figure 4).

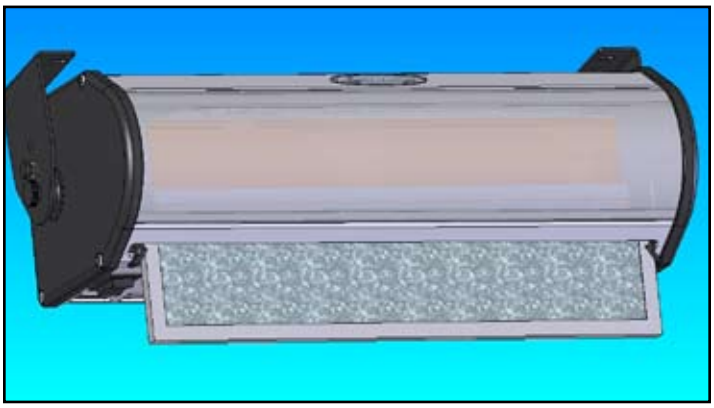

FIGURE 4 -Filter Removal

To clean the interior of the unit:

A. Disconnect the power to the unit; remove the intake grille by removing the (4) screws on one side of the unit. Pull the top of the end cap outward to release the filter tab to remove end cap. Slide the intake grille out of unit (See Figure 5). It is not recommended to remove the blower assembly from the cabinet. To clean the motor and blower wheels, with the filter and inlet screen removed, blow compressed air in the unit to remove loose dust and debris.

CAUTION: STAND CLEAR OF THE UNIT OR WEAR SAFETY GOGGLES AS LOOSE DEBRIS MAY BE PRESENT AND MAY EXIT THE NOZZLE.

B. Connect power and switch the power on after cleaning.

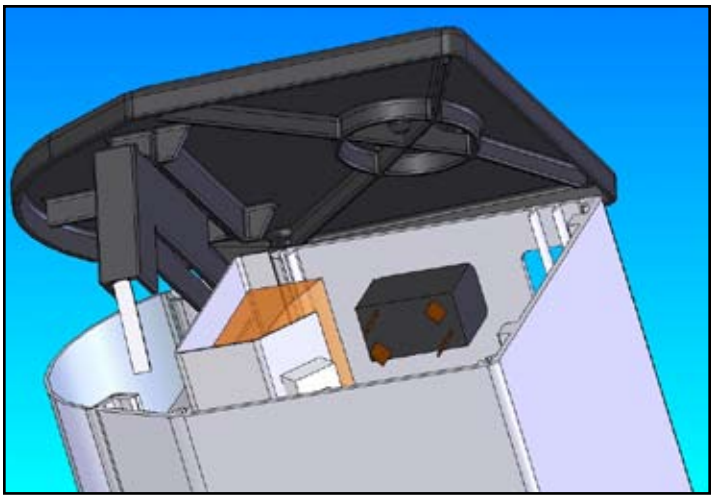

FIGURE 5 -Removing End Cap

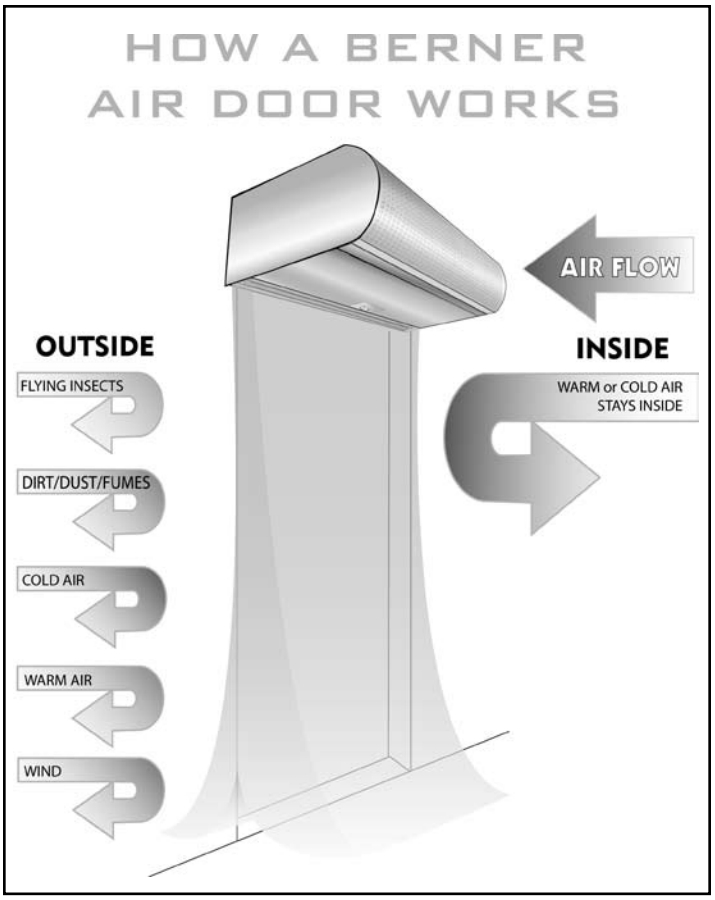

www.berner.com
800-343-7991

VIII. SERVICE

CAUTION: ELECTRIC SHOCK HAZARD:

Disconnect power when servicing unit.
More than one disconnect may be required to de-energize unit.

Any service performed on the Drive-Thru Unit air door ***MUST*** *be done by qualified personnel.*

Berner air doors require very little servicing. All parts are easily accessible for periodic inspection and maintenance. Units should be cleaned at least twice a year. Your particular application (the amount of dirt and dust in the air) and location of the unit(s) will determine how often your unit(s) will need to be cleaned and serviced. All motors have permanently lubricated, sealed, sleeve, or ball bearings and require no maintenance.

A. REPLACEMENT OF ELECTRIC HEATER ELEMENT

1. Disconnect power to the unit.
2. Remove the end cap and intake grille by removing the screws on one end of the unit and sliding the grille out.
3. Remove and mark all wires from damaged element.
4. To remove damaged element from unit, slide it out through the front of the unit.
5. Install new element and connect all wires.
6. Reinstall intake grille and end cap.
7. Connect power and turn power on.

WARRANTY

Berner International warrants all new equipment to be free of defects in workmanship and material for a period of one year on unheated and heated models from the original date of shipment, provided the equipment has been properly cared for, installed and operated in accordance with the limits specified on the nameplate and The Company's instructions.

The Company will correct by repair or replacement, at its option and expense, any proven defects in said apparatus, subject to the above conditions, provided that immediate written notice of such defects is given to The Company. The warranty does not include any labor incurred for the removal or installation of defective part(s). The Company reserves the right to inspect, or have inspected by a qualified representative, any apparatus at the place of installation before authorizing repair or replacement. Repair or replacement will be made F.O.B. factory with any applicable transportation charges to be borne by the customer. Merchandise not of The Company's manufacture supplied in piece, or in component assemblies, is not covered by the above warranty, but The Company will give the customer the benefit of any adjustment as made with the Manufacturer.

This warranty is void if the apparatus has been tampered with in any way or shows evidence of misuse.

The Company will not assume any expense or liability for repairs made outside its factory without proper written consent from its service manager, nor for any transportation charges on apparatus returned to the factory without written authorization by The Company.

Nothing in the above warranty provisions, however, shall impose any liability or obligation of any type, nature or description upon Berner International if Berner has not received payment in full for the apparatus in question.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF INCLUDING THE IMPLIED WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

LIMITATION OF DAMAGES

Notwithstanding anything to the contrary above, customer's exclusive remedy for any and all losses or damages resulting from the sale of The Company's equipment under this agreement, including but not limited to, any allegations of breach of warranty, breach of contract, negligence or strict liability, shall be limited, at The Company's option, to either the return of the purchase price or the replacement of the particular equipment for which a claim is made and proved. In no event shall The Company be liable for any special, consequential, incidental or indirect losses or damages from the sale of The Company's equipment under this agreement.

IV. SUSPENDED MOUNTING 3
V. ELECTRICAL CONNECTIONS 3
VI. MECHANICAL CONNECTIONS 4
VII. AIRFLOW ADJUSTMENTS 4
VIII. MAINTENANCE AND CLEANING 4
IX. SERVICE 4
TROUBLESHOOTING 5

To meet NSF Standard 37 requirements, the air curtain width must be greater than or equal to the opening width with a maximum mounting height of 7 feet for all EZN/KZN models.

WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

A. Use this unit only in the manner intended by the manufacturer. If you have any questions, contact the manufacturer.
B. Before servicing or cleaning unit, switch power off at service panel and lock the service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.
C. Installation work and electrical wiring must be done by qualified person(s) in accordance with all applicable codes and standards, including fire-rated construction.
D. Sufficient air is needed for proper combustion and exhausting of gases through the flue (chimney) of fuel burning equipment to prevent back drafting. Follow the heating equipment manufacturer's guideline and safety standards such as those published by the National Fire Protection Association (NFPA), and the American Society for Heating, Refrigeration and Air Conditioning Engineers (ASHRAE), and local code authorities.
E. When cutting or drilling into wall or ceiling, do not damage electrical wiring and other hidden utilities.

I. UNCRATING

Carefully examine the carton(s) for damage before opening. If the carton is damaged, immediately notify shipping company. If the unit(s) were shipped on wooden skids, remove protective wood and banding straps securing the carton(s) to the skid. Open the carton(s) and remove all protective packaging. Remove the plastic cover housing by lifting vertically. Remove and discard four (4) nuts and washers holding the motor/blower section to the bottom of the carton. Remove motor/blower section from the carton.

CAUTION: ONLY LIFT THE UNIT BY GRASPING INLET RINGS ON THE BLOWER HOUSING WITHOUT TOUCHING BLOWER WHEELS.

Immediately verify that the electrical rating nameplate located on the cover matches electrical power supply available. Retain the shipping carton(s) until the unit(s) are installed and properly operating.

ACCESSORIES: If the unit(s) were ordered with optional electrical accessories (door switch, control panel, etc.), the accessories may be found in the carton containing the unit or in a separate carton(s) accompanying the unit(s). Check all of the cartons/skids for accessories before discarding.

II. MOUNTING INSTRUCTIONS *(General)*

The E-Zone/K-Zone air door is designed to be an effective barrier against cold drafts in the winter and hot air in the summer, flying insects and airborne contaminants. To achieve optimum protection, the unit should be mounted on the inside of the building, flush to the wall and as close to the top of the door opening as possible. To ensure peak performance keep air stream free of obstructions.

The air door will not perform properly if negative air pressure exists in the building. Under these conditions, a means for makeup air to the building must be provided so that the air pressure on both sides of the opening is in balance.

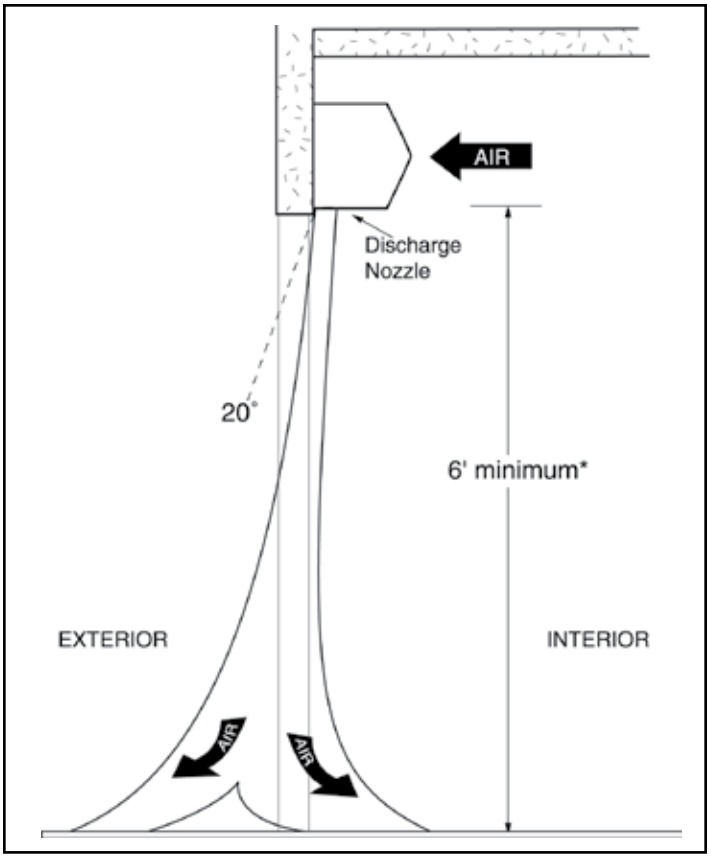

FIGURE 1 - Air Stream

MODEL	Net Weight Ambient (lbs)
EZN/KZN1030A	33
EZN/KZN1036A	38
EZN/KZN1042A	43
EZN/KZN1048A	48
EZN/KZN1060A	57
EZN/KZN1072A	64

TABLE 1 - Weight Chart

Before mounting the unit, check the supporting structure to verify that it has sufficient load-carrying capacity to support the weight of the unit(s). The mounting hardware (supplied by others) should be capable of supporting a minimum of three (3) times the weight of the unit. **See TABLE 1.**

WARNING: Use caution when mounting the air curtain to ensure adequate clearance is provided for variable speed control knob located on unit bottom. Failure to do so will result in permanent damage to the controller.

A. When determining the mounting location for the unit(s), make sure that nothing interferes with the curtain of air developed when the discharge vanes are directed from 0° to 20° toward the door opening. If the air stream strikes any obstruction (the top edge of the doorway, a door opening device, etc.), the effectiveness of the unit will be greatly reduced. **See FIGURE 1**
B. For optimum performance, the bottom of the unit (discharge nozzle) should be no more than 1" above the top of the door opening with the unit mounted flush to the wall. If the unit must be mounted higher, it must be **spaced out** from the wall **3/8" for every inch** the unit is above the door opening. Any void between the air door and the wall should be sealed along the full length of the unit. **See FIGURE 2**
C. Proceed to **Section III-WALL MOUNTING**

III. WALL MOUNTING

A. Determine the location on the wall above the opening where the air curtain will be mounted. This location should center the unit over the opening and provide suitable mounting support. It is recommended to use at least four locations that correspond to the outer corners of the wall mounting plate. **See FIGURE 3.**
B. Prepare the wall as necessary for the wall mounting plate anchors (by others).
C. Drill holes in the wall mounting plate to correspond to the locations on the wall.

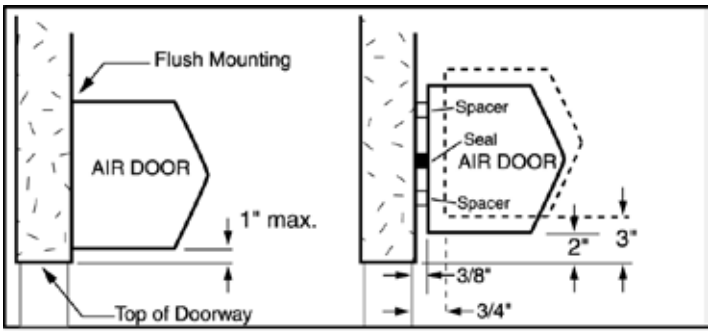

FIGURE 2 - Positioning of Air Door

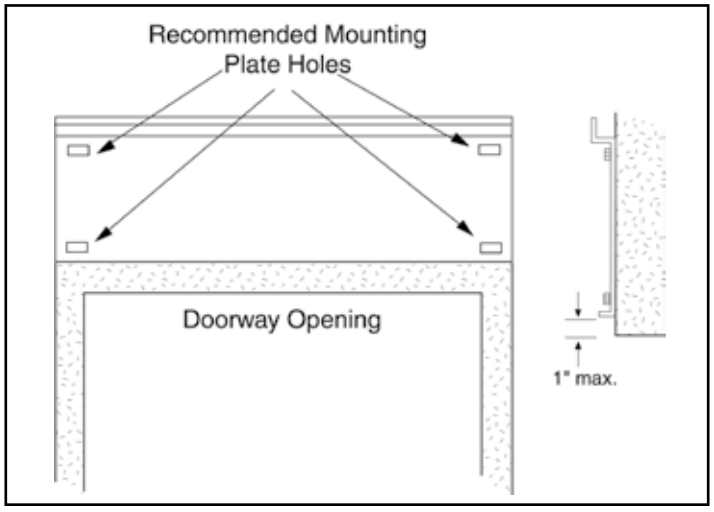

FIGURE 3 - Positioning of Mounting Plate

D. Anchor the wall mounting plate over the door opening with the mounting tabs pointing upwards.
E. Raise the unit over the door (air discharge nozzle facing down) and on to the mounting plate. First, tilt the unit upward matching the holes in the frame with the tabs on the mounting plate. **See FIGURE 4.**
F. Lower the unit into place allowing it to rest on the mounting plate. The unit flange should rest above the mounting plate flange.
G. After the unit is securely seated to the mounting plate, install the locking screws along the bottom flange. **See FIGURE 4.**

IV. SUSPENDED MOUNTING

(Ceiling Suspension)

A. When the unit is top mounted, the wall mounting plate is designed to store on the back of unit for future use.
B. Four (4) factory installed #10-24 threaded inserts are located on the top of the unit for top suspension mounting. **See Figure 5**
C. Determine the exact mounting location of the air door unit.
D. The top of the unit is provided with an electrical knockout for power connection. Remove the wiring tray compartmentcover. Remove the knockout and attach necessary electrical hardware. Save the wiring diagram found inside of wiring tray.
E. Attach #10-24 threaded rods, or other suitable hardware to the top mounted threaded inserts.

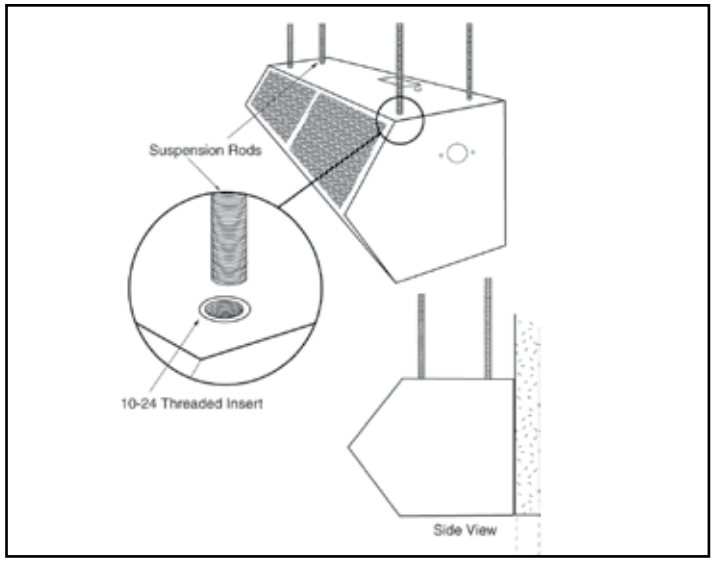

FIGURE 5 - Suspended Mounting

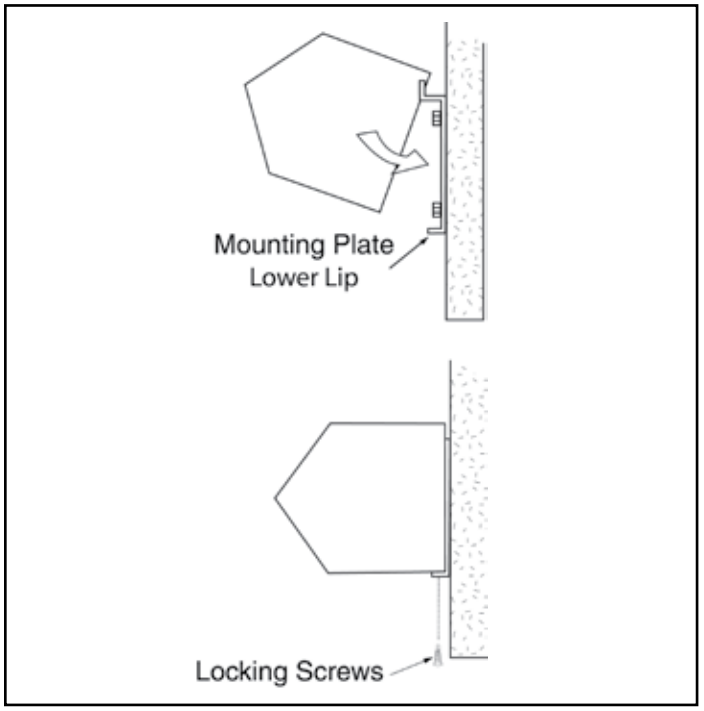

FIGURE 4 - Attaching Unit to Mounting Plate

F. Proceed to **Section V - Electrical Connections**

V. ELECTRICAL CONNECTIONS

All electrical wiring and connections **MUST** be performed by qualified personnel in accordance with the latest edition of the National Electrical Code ANSI/NFPA No. 70 or, in Canada, the Canadian Electrical Code, Part 1-C.S.A. Standard C22.1 and local codes and regulations.

A. Check the rating nameplate on the unit for supply voltage and current requirements. A separate line voltage supply with a suitable branch circuit protection device should be run directly from the main electrical panel to the unit. A disconnect switch for each branch circuit is a required part of this installation. **See TABLE 2**
B. All field wiring must be copper with a minimum insulation of 60°C within approved conduit. If any of the wire supplied with the unit must be replaced, it must be replaced with copper wiring with a minimum insulation of 90°C.
C. Remove the wiring compartment cover located on the top of the unit. **See FIGURE 6**
D. A ½" knockout is provided next to the wiring compartment

MOTOR DATA			
Model	#Motors @HP	120 V 1ø	208/240 V 1ø
		Total Motor Amps	Total Motor Amps
EZN/KZN1030	1@1/5	3.4	1.7
EZN/KZN1036	1@1/5	3.4	1.7
EZN/KZN1042	1@1/5	3.4	1.7
EZN/KZN1048	1@1/5	3.4	1.7
EZN/KZN1060	1@1/5	3.4	1.7
EZN/KZN1072	1@1/5	3.4	1.7

** Operation at 50 HZ will generate approximately a 17% reduction in performance.

TABLE 2 - Motor Amp Ratings

to connect electrical conduit. Connect all supply and control circuit wires according to the wiring diagram.

E. Reinstall the wiring compartment cover.

F. Switch on the power at the service disconnect. Turn on the unit and check the sequence of operation against the wiring diagram.

G. Proceed to **Section VI-AIRFLOW ADJUSTMENTS.**

VI. AIRFLOW ADJUSTMENTS

A. AIR STREAM SPLIT ADJUSTMENT

1. With the air door operating and the door in its full open position, check to see that nothing is obstructing the air flow at the discharge nozzle vanes.
2. Find the air stream split location. Hold a handkerchief, by its corners, approximately 12" above the floor. Gently move the handkerchief back and forth in the doorway. Make sure the air is being directed to both the inside and the outside. The split location is indicated where the handkerchief is vertical with minimal or no fluttering. **See FIGURE 7.**
3. Adjust the discharge nozzle vanes so the split location is approximately 3" outside the doorway. This is accomplished by first de-energizing the unit. Remove the cover housing, loosen the nozzle vane locking screws and adjusting vanes.

B. LOW SPEED ADJUSTMENT

NOTE: This Section is applicable to units with a factory supplied speed controller only. A speed control device shall not be used on units required to comply with EPH or NSF Standard 37.

NOTE: Variable speed controller is not factory set for low speed setting. If low speed setting is desired it must be done after installation.

WARNING: Changing the low speed setting too much can cause the motor to stall on low speed.

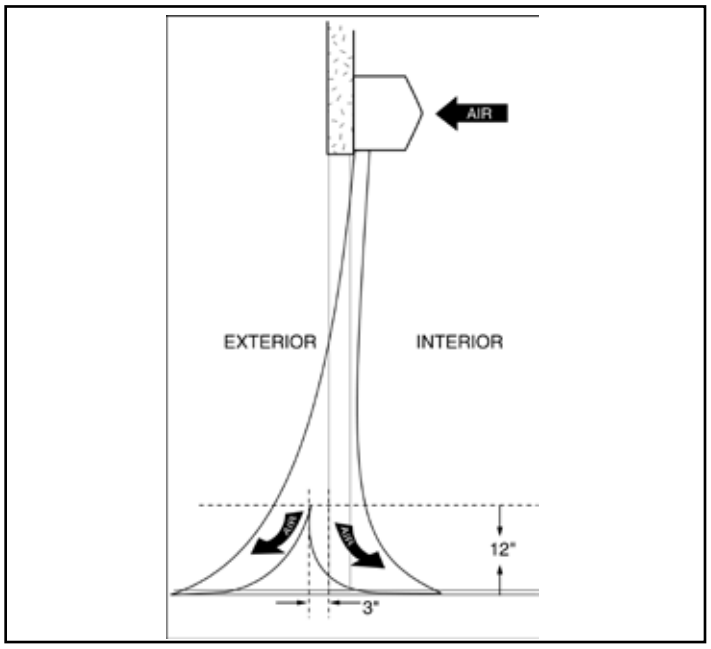

FIGURE 7 - Air Flow Adjustment

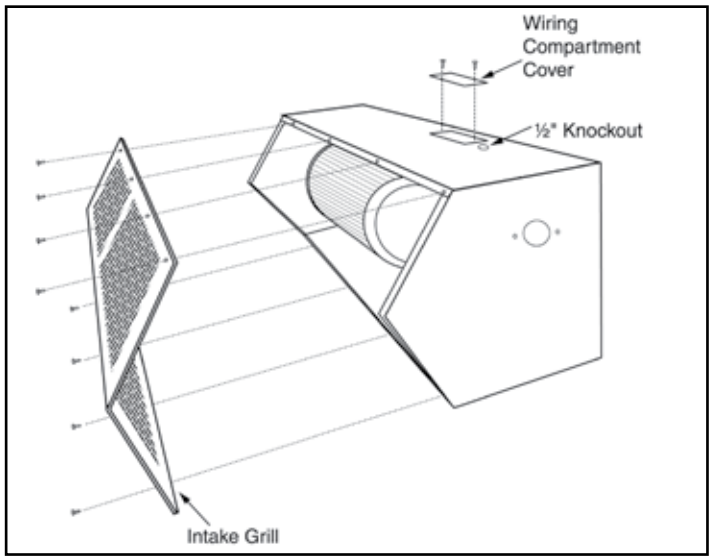

FIGURE 6 - Junction Box

1. Turn the speed controller knob clockwise to low speed.
2. Insert a small phillips screwdriver in the hole located next to the speed control knob and slowly turn adjusting screw clockwise to lower the speed. A small degree of rotation is required to change speed. Wait for speed to settle after each turn.

VII. MAINTENANCE AND CLEANING

CAUTION: ELECTRIC SHOCK HAZARD Disconnect power whenever servicing unit. More than one disconnect may be required to de-energize unit.

Keep your air door operating at peak efficiency by cleaning the blower wheels, motor(s) and intake grille. Buildup of dust on the blower wheels can cause vibration, noise and excessive wear on the motor bearings. The frequency of cleaning will depend on the environment where the unit is operating.

Dirty, dusty or greasy environments could require a cleaning schedule of once every two months. If the environment is not that dirty, the unit(s) should be scheduled for cleaning a minimum of once every (6) months. To access the interior of the unit:

A. Disconnect the power to the unit.

B. Remove the intake grille by removing all phillips head screws around edge. **See FIGURE 6.**

C. Vacuum and scrape (if necessary) to remove the buildup of dirt and debris. The motor(s) are permanently lubricated and require no additional lubrication. Reinstall the cover and intake grille.

D. Switch the power on after cleaning. **CAUTION: STAND CLEAR OF THE UNIT OR WEAR SAFETY GOGGLES AS LOOSE DEBRIS MAY BE PRESENT AND MAY EXIT THE NOZZLE.**

VIII. SERVICE

CAUTION: ELECTRIC SHOCK HAZARD Disconnect power whenever servicing unit. More than one disconnect may be required to de-energize unit.

*Any service performed on the EZN/KZN Series air door **MUST** be done by qualified personnel.*

Berner air doors require very little servicing. All parts are easily accessible for periodic inspection and maintenance. Units should be cleaned at least twice a year. Your particular application (the amount of dirt and dust in the air) and location of the unit(s) will determine how often your unit(s) will need to be cleaned and serviced. All motors have permanently lubricated, sealed, sleeve bearings and require no maintenance.

A. UNIT MOUNTED ROTARY SWITCH REMOVAL

The variable speed switch must be removed from the bottom of the unit.

1. Disconnect power to the unit.
2. Remove the intake grille by removing all phillips head screws around edge. **See FIGURE 6.**
3. Disconnect and mark the wires in the unit connected to the switch.
4. Remove the knob from the switch by pulling it straight away from the unit.
5. Remove the two phillips head screws holding the switch and nameplate to the unit.
6. Remove the switch by pushing it into the unit.
7. Reinstall in reverse order of removal.

B. FAN AND MOTOR REMOVAL

1. Disconnect power to the unit.
2. Remove the intake grille by removing all phillips head screws around edge. **See FIGURE 6.**
3. Unplug motor harness from motor and remove necessary wiring.
4. Using a 1/8" Allen wrench, loosen each set screw attaching fan(s) to motor.
5. While holding the motor in place, loosen and remove the motor clips.
6. Slide the fans toward the motor so that the ball bearings on the outer fan shaft are exposed.
7. Slowly roll the motor out of the motor mount cradle forward and down. The hubs of the fans are flexible enough to allow the motor to move before the fans' outer ball bearings pull out of the unit.
8. Reinstall in reverse order of removal.

TROUBLESHOOTING

SYMPTOMS	CAUSE	REMEDY
NO AIR	• Electrical Power supply line open (no power) • Fuse blown/circuit breaker tripped • Motor overload tripped • Failed switch	• Check power source, check method of control in ON position • Replace fuse(s)/reset breaker • Internally protected motor - should reset automatically after cool-down, if not, replace motor. • Replace switch
	MOTOR RUNNING/FANS ARE NOT ROTATING	
	• Broken fan hub • Shaft rotating inside fan • Broken / Loose coupling	• Replace fan • Tighten set screws/tighten fan on shaft • Replace / Tighten coupling
	ELECTRICAL CONTROLS NOT FUNCTIONING WHEN DOOR IS OPEN	
	• Selector switch is in off position • Door limit switch not operating	• Turn switch to "ON" position • Repair or replace limit switch
MINIMUM AIR	• Air directional discharge vanes misadjusted • Inadequate intake clearance • Blower motor operates below speed • Fan rubbing against housing • Fan wheels clogged with dirt	• Adjust vanes to proper position, see instructions • Move air curtain or remove obstruction Provide adequate space for air curtain • Improper voltage • Free fan from housing • Clean and vacuum fan wheels
AIR IS NOT HITTING FLOOR	• Air stream to weak • Air steam hits obstruction • Negative pressure	• Adjust nozzle to proper position, adjust motor speed; see installation instructions • Remove obstruction or reposition air curtain (move out 3/8" for every 1" up from the door) • Relieve negative pressure by providing makeup air
UNEVEN AIR	• Shaft rotating inside fan	• Tighten set screws/Replace fan
EXCESSIVE AIR MOVEMENT AT DOORWAY	• Nozzle not angled out far enough • Air movement too cold • Pushing air outside building SEE AIR IS NOT HITTING FLOOR SYMPTOMS	• Adjust nozzle angle to outside • Add auxiliary heat to overcome wind chill • Adjust discharge angle back into building

WARRANTY

Berner International warrants all new equipment to be free of defects in workmanship and material for a period of five years (5 years) on unheated models and two years (2 years) on heated models from the original date of shipment, provided the equipment has been properly cared for, installed and operated in accordance with the limits specified on the nameplate and The Company's instructions.

The Company will correct by repair or replacement, at its option and expense, any proven defects in said apparatus, subject to the above conditions, provided that immediate written notice of such defects is given to The Company. The warranty does not include any labor incurred for the removal or installation of defective part(s). The Company reserves the right to inspect, or have inspected by a qualified representative, any apparatus at the place of installation before authorizing repair or replacement. Repair or replacement will be made F.O.B. factory with any applicable transportation charges to be borne by the customer. Merchandise not of The Company's manufacture supplied in piece, or in component assemblies, is not covered by the above warranty, but The Company will give the customer the benefit of any adjustment as made with the Manufacturer.

This warranty is void if the apparatus has been tampered with in any way or shows evidence of misuse.

The Company will not assume any expense or liability for repairs made outside its factory without proper written consent from its service manager, nor for any transportation charges on apparatus returned to the factory without written authorization by The Company.

Nothing in the above warranty provisions, however, shall impose any liability or obligation of any type, nature or description upon Berner International if Berner has not received payment in full for the apparatus in question.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HERE OF INCLUDING THE IMPLIED WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

LIMITATION OF DAMAGES

Notwithstanding anything to the contrary above, customer's exclusive remedy for any and all losses or damages resulting from the sale of The Company's equipment under this agreement, including but not limited to, any allegations of breach of warranty, breach of contract, negligence or strict liability, shall be limited, at The Company's option, to either the return of the purchase price or the replacement of the particular equipment for which a claim is made and proved. In no event shall The Company be liable for any special, consequential, incidental or indirect losses or damages from the sale of The Company's equipment under this agreement.

WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

A. Use this unit only in the manner intended by the manufacturer. If you have any questions, contact the manufacturer.
B. Before servicing or cleaning unit, switch power off at service panel and lock the service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.
C. Installation work and electrical wiring must be done by qualified person(s) in accordance with all applicable codes and standards, including fire-rated construction. (See page 4 V. ELECTRICAL CONNECTIONS (NEC Code ANSI/NFPA No. 70)
D. Sufficient air is needed for proper combustion and exhausting of gases through the flue (chimney) of fuel burning equipment to prevent back drafting. Follow the heating equipment manufacturer's guideline and safety standards such as those published by the National Fire Protection Association (NFPA), and the American Society for Heating, Refrigeration and Air Conditioning Engineers (ASHRAE), and local code authorities.
E. When cutting or drilling into wall or ceiling, do not damage electrical wiring and other hidden utilities.

I. UNCRATING

Carefully examine the carton(s) for damage. If the carton is damaged, immediately notify the shipping company. **Do not delay in filing claim.** If the air door(s) were shipped on wooden skids, remove protective wood and banding straps securing the carton(s) to the skid. Open the carton(s) and remove all protective packaging. Immediately verify that the electrical rating nameplate located on the cover matches electrical power supply available. Retain the shipping carton(s) until the air door(s) are installed and properly operating.

ACCESSORIES: If the air door(s) were ordered with optional electrical accessories, the accessories will be found in the carton containing the air door or in a separate carton(s) accompanying the air door(s). Check all of the cartons/skids for accessories before discarding.

II. MOUNTING INSTRUCTIONS

(General)

INDOOR MOUNTING ONLY - Environmental/Insect/Dust Control

The MaxAir /Zephyr Air Door are designed to be an effective barrier against cold drafts in the winter and hot air in the summer. To achieve optimum protection, the air door should be mounted on the inside of the building, flush to the wall and as close to the top of the door opening as possible. To ensure peak performance, keep the air stream free of obstructions.

The air door will not perform properly if negative air pressure exists in the building. Under these conditions, a means for makeup air to the building must be provided so that the air pressure on both sides of the opening is in balance.

Before mounting the air door, check the supporting structure to verify that it has sufficient load-carrying capacity to support the weight of the air door(s). The mounting hardware (supplied by others) should be capable of supporting a minimum of three (3) times the weight of the air door.
See Table 1.

IMPORTANT: A minimum of 1″ is required above the top of the air door for the installation and removal of the cover housing.

A. When determining the mounting location for the air door(s), make sure that nothing interferes with the curtain of air developed when the discharge vanes are directed from 0º to 20º toward the door opening. If the air stream strikes any obstruction (the top edge of the doorway, a door opening device, etc.), the effectiveness of the air door will be greatly reduced. **See Figure 1**.
B. For optimum performance, the bottom of the air door (discharge nozzle) should be no more than 1″ above the top of the door opening with the air door(s) mounted flush to the wall. If the air door must be mounted higher, it must be **spaced out** from the wall **3/8″ for every inch** the air door is above the door opening. **See Figure 3**. For optimum protection, any void between the air door and the wall should be sealed along the full length of the air door.
C. **Electric heated air door(s) shall:**
   1. Have a minimum clearance of at least 1″ between the sides and top of the air door and any combustible material.
   2. Have a minimum clearance of at least 6′ between the bottom of the air door and the floor.
   3. Be installed Indoors Only.
D. Proceed to either **Section III - WALL MOUNTING** or **Section IV - SUSPENDED MOUNTING**

MODEL	Net Weight Ambient (lbs)	Net Weight Heated (lbs)	Net Weight Steam/Hot Water (lbs)
MAX/ZPR1030	33	40.5	39
MAX/ZPR1036	38	45.5	48
MAX/ZPR1042	43	50	55
MAX/ZPR1048	48	56	62
MAX/ZPR1060	57	75	75
MAX/ZPR1072	64	76.5	87
MAX/ZPR2084	86	100	113
MAX/ZPR2096	96	111.5	127
MAX/ZPR2120	124	145.5	163

TABLE 1 - Unit Weight

III. WALL MOUNTING

A. The MaxAir/Zephyr Air Door is equipped with two ¼″ threaded inserts on the back of each air door (two per module on air doors 84″ and over). Insert and tighten the shoulder bolts (provided in bag taped to the wall plate) into these threaded inserts. A minimum of two shoulder bolts are required; on air doors comprised of modules, use the outer threaded inserts and a minimum of one of the inner threaded inserts.

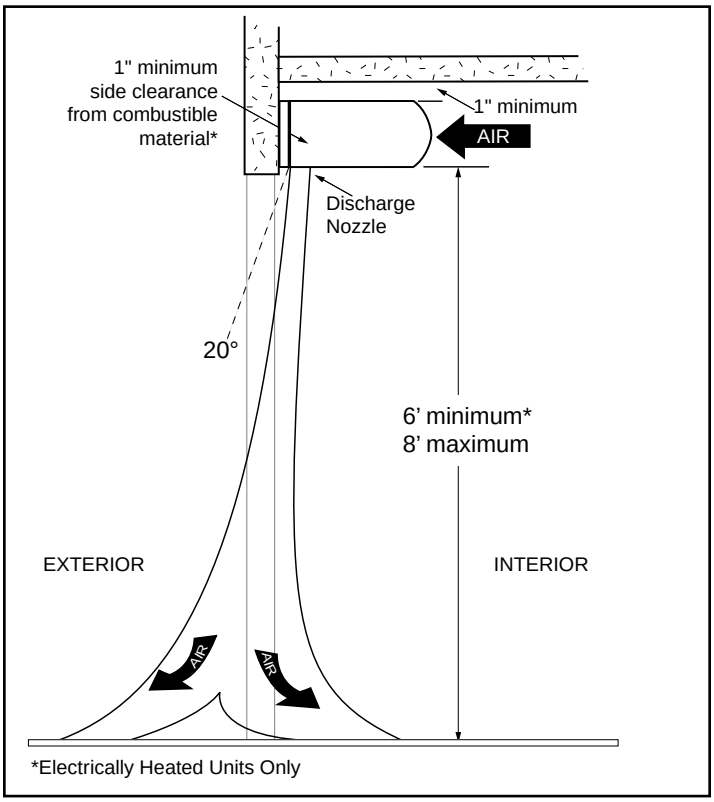

FIGURE 1 - Mounting Location

B. Determine the exact mounting location of the air door.
NOTE: A minimum of 1" is required above the wall mounting plate to provide clearance for installation and removal of the air door.

C. Remove the wall mounting plate from the unit to install. The wall mounting plate (included) is designed to fit flush with the top of the MaxAir/Zephyr Air Door. Therefore the location of the wall mounting plate will determine the final location of the top of the air door.

D. For Standard Flush Wall Mounting, position the center of the wall mounting plate over the center of the door open ing with the larger opening of the key hole slots facing up. The wall mounting plate thickness provides a natural ¾" space which allows for mounting it up to 4" above the opening. For optimum performance, the bottom of the mounting plate should *be no more than 2" or less than 1"* above the top of the door opening.
See Figure 2.
High Wall Mounting must be used if the wall mounting plate must be mounted higher than 4" above the door opening: the mounting plate must be **spaced out** from the wall **3/8" for every additional inch** (over 4") that the air door is above the door opening (clearance height). **See Figure 3.** For optimum protection, do not exceed the recommended **maximum mounting height of 8'** above the finished floor. Any void between the mounting plate and the wall should be sealed along the full length of the mounting plate.

E. Determine which of the four holes provided in each of the steel brackets of the wall mounting plate are located where suitable support is available for the air door.
A minimum of one inside hole and one outside hole from

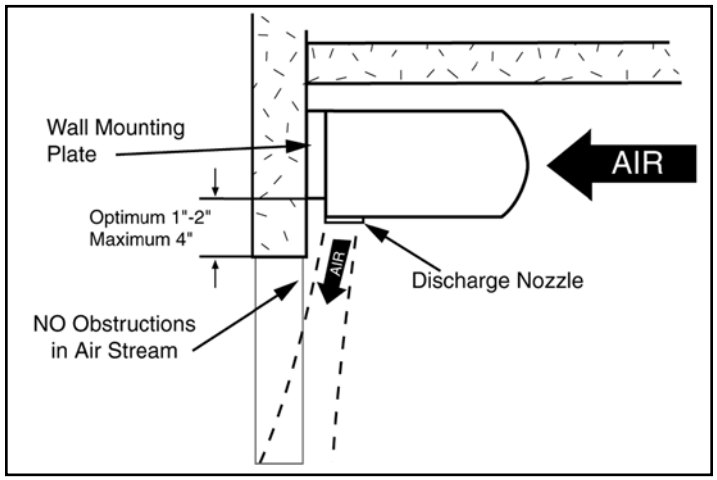

FIGURE 2 - Standard Flush Wall Mounting

each bracket must be used for proper support.
Drill out the aluminum backing of the holes chosen with a ¼" drill bit. If the provided holes on the mounting plate are not located where suitable support is available, drill new holes in the space provided on the steel mounting brackets.

F. Mark the wall in the centers of the ¼" holes drilled on the mounting plate.

G. Attach the mounting plate to the wall (hardware by others).

H. The top of the air door is provided with two knockouts on each side allowing for a left or right hand power connection. Remove the wiring tray cover; on air doors

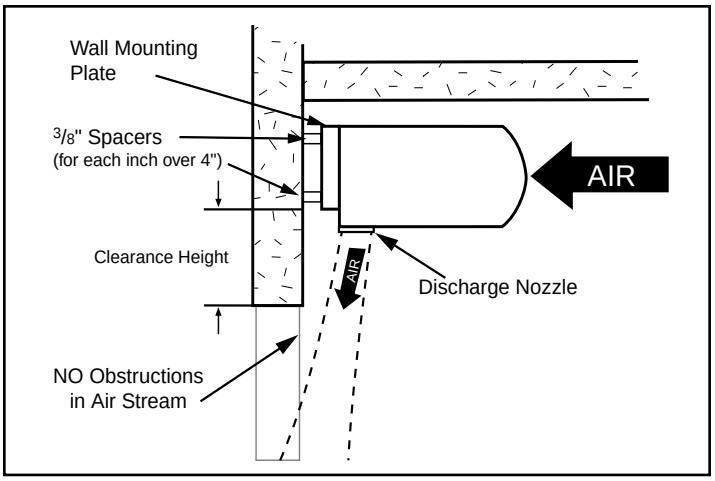

FIGURE 3 - High Wall Mounting

that are comprised of modules, remove the wiring tray cover that is located closest to the electrical rating nameplate. Remove the required knockouts and attach the necessary electrical hardware. ***Save the wiring diagram found inside of the wiring tray.*** **See Figure 7.**

I. There are two sets of keyhole slots on the wall mounting plate. *In low overhead installations, the air door may be staged in the lower keyholes to provide clearance for electrical wiring and then moved to the higher key holes after completion.* Raise the air door with the discharge opening facing down toward the floor. While holding the air door level, slide the heads of the shoulder bolts into the larger hole of the keyhole slots of the mounting plate. Lower the air door into place, keeping both ends level, allowing it to rest flush with the mounting plate. **See Figure 4.**

J. After attaching the air door to the mounting plate, ensure that the air door is seated and flush with the mounting plate on all four sides.

K. Proceed to **Section V - Electrical Connections.**

IV. SUSPENDED MOUNTING

(Ceiling Suspension)

A. When the air door is top mounted, the wall mounting plate is designed to store on the back of the air door for future use. **See Figure 5**.

B. Four (4) factory installed ¼" threaded inserts are located on the top of the air door for top suspension mounting; on air doors comprised of modules use the outer threaded inserts.
To eliminate the slight deflection of longer air doors, the inner threaded inserts may also be used. **See Figure 6.**

C. Determine the exact mounting location of the air door.

D. The top of the air door is provided with two knock-outs on each side allowing for a left or right hand power connection. Remove the wiring tray cover; on air doors that are comprised of modules, remove the wiring tray cover that is located closest to the electrical rating nameplate. Remove the required knockouts and attach the necessary electrical hardware. Save the wiring diagram found inside of the wiring tray. **See Figure 7.**

E. Attach ¼" threaded rods or other suitable hardware to the top mounted threaded inserts.

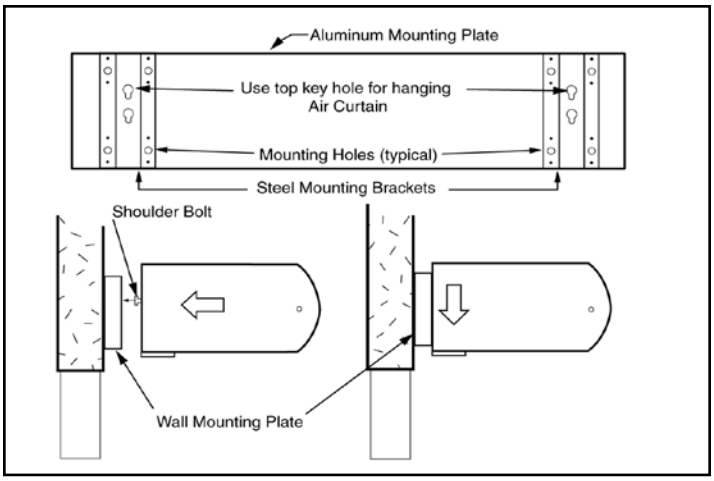

FIGURE 4 - Installing Air Door on Wall Mounting Plate

F. Proceed to **Section V - Electrical Connections.**

V. ELECTRICAL CONNECTIONS

All electrical wiring and connections **MUST** be performed by qualified personnel in accordance with the National Electrical Code ANSI/NFPA No. 70 (latest edition) or, in Canada, the Canadian Electrical Code, Part 1-C.S.A. Standard C22.1 and local codes and regulations.

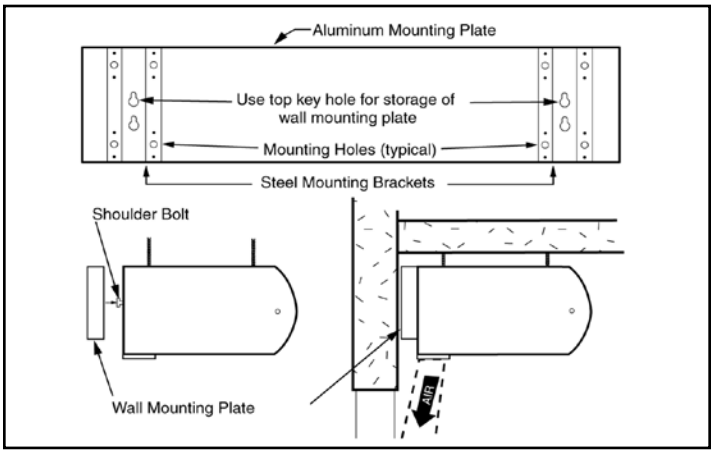

FIGURE 5 - Wall Mounting Plate Storage

A. Check the rating nameplate on the top of the air door for supply voltage and current requirements. **See Figure 7.** A separate line voltage supply with a suitable branch circuit protection device should be run directly from the main electrical panel to the air door. A disconnect switch for each branch circuit is a required part of this installation. **See Tables 2 & 3.**

B. All field wiring must be copper with a minimum insulation of 60° C within approved conduit. If any of the wire supplied with the air door must be replaced, it must be replaced with copper wiring with a minimum insulation of 90° C.

C. Remove the wiring tray cover; on air doors that are comprised of modules, remove the wiring tray cover that is located closest to the electrical rating nameplate (if it has not already been done).

D. Electric, steam and hot water heated air doors are factory equipped with a air door mounted solid state temperature sensor cable (for the Intelliswitch thermostat) located in the wiring tray. Depending where the temperature is to be measured, the sensor may be left in the wiring tray or it may be located outside of the air door. If the air door is unheated, or the sensor will be left in the wiring tray, skip to step E, otherwise continue.

1. Remove the ½" bushing taped to the back of the wiring tray cover and set aside.
2. Determine mounting location of the temperature sensor (do not mount at this time).
3. Choose end of the wiring tray that the sensor will exit the air door based on the mounting location from Step 2.
4. Locate the ⅛" hole on the wiring tray next to the electrical knockout on the side determined in Step 3.
5. Drill out the ⅛" hole to ½".

CAUTION: DO NOT DAMAGE EXISTING WIRES IN THE WIRING TRAY WHEN DRILLING.

6. Maneuver the tip of the temperature sensor from the inside of the wiring tray out through ½" hole.
7. Thread the tip through ½" bushing from Step 1 and snap the bushing into the wiring tray.
8. Mount the temperature sensor. Do not put any clamps on the rubber coated tip.

E. The top of the air door has two knockouts on each side of the air door, allowing for a left hand or right hand power connection. Remove the required knockout if it has not already been done and connect the power supply to the air door. Connect all supply and control circuit wires according to the wiring diagram provided.
NOTE: For Electric heated air doors provided with the optional remote thermostat, mount and wire the thermostat according to instructions and wiring diagram.

F. Master/Slave connection, if two or more units are to be linked together for master/Slave operation continue, otherwise skip to step G.

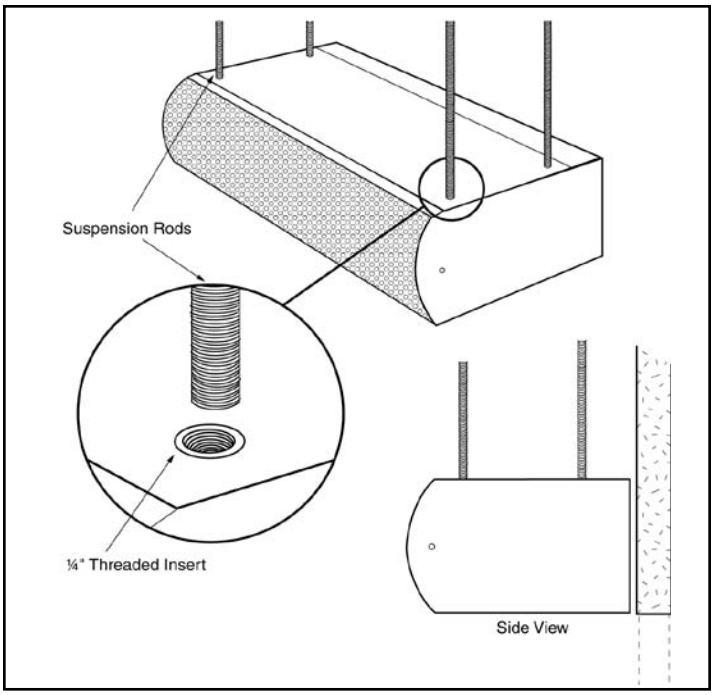

FIGURE 6 - Suspended Mounting

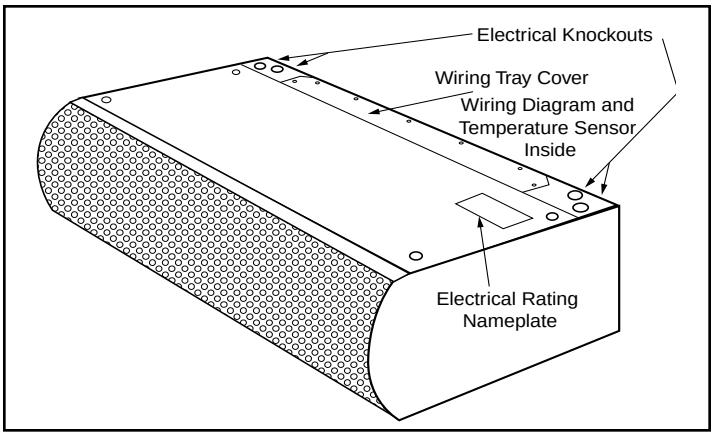

FIGURE 7 - Electrical Connections

MOTOR DATA			
Model	#Motors @HP	120 V 1ø	208/240 V 1ø
		Total Motor Amps	Total Motor Amps
MAX/ZPR1030	1@1/5	3.4	1.7
MAX/ZPR1036	1@1/5	3.4	1.7
MAX/ZPR1042	1@1/5	3.4	1.7
MAX/ZPR1048	1@1/5	3.4	1.7
MAX/ZPR1060	1@1/5	3.4	1.7
MAX/ZPR1072	1@1/5	3.4	1.7
MAX/ZPR2084	2@1/5	6.8	3.4
MAX/ZPR2096	2@1/5	6.8	3.4
MAX/ZPR2120	2@1/5	6.8	3.4

TABLE 2 - Motor Amp Draw

NOTE: One Intelliswitch serial cable assembly (part # 505SC*INT485-A) is required for every unit that is to be used as a master/slave. "***" denotes length of cable in feet- "008" = 8 feet long.**

For Master/Slave operation, a serial cable connection must be made between the INTELLISWITCH GEN2 control boards of each unit to be linked.

1. Disconnect power to all the units.
2. Access the wiring tray on top of each unit by removing the screws that hold the cover in place.
3. Find the (RS485) phone jack couplers in the wiring trays. There will be two short cables in the wiring tray of each air curtain, each with a double ended female phone jack coupler attached to the cable.
4. The serial cable ordered for each unit will be coiled up in the wiring tray of the unit and connected to one of the couplers.

Note: There may be one less serial cable than the number of units ordered. e.g. Two units together will need only one cable; three units together will need two cables, etc. Any extra cables can be kept as spares.

5. Use one of the extra electrical knockouts to route serial cable from one unit to the next. Be sure to protect the edge of the knockout properly.
6. Plug (RS485) male phone jack on the end of the serial cable into the empty coupler on the next unit.
7. Continue process for all units that are to be connected serially.
8. Serial cable connections are capable of two way com munication. It does not matter which coupler the cables are connected to.
9. The first and last air curtains in the group will each have an empty coupler after all connections are made. So if there are only two air curtains connected, each will have an empty cable coupler.

ELECTRIC HEATER DATA* Add total motor amp draw from Table #2 to circuit #1 for air door total amp draw

*Optional kW available. Check wiring diagram supplied with air door for kW and AMP draw if not listed above.

** Separate 120V, 208V or 240V single phase circuit required to operate motors rated in Table 2.

TABLE 3 - Electric Heater Amp Draw

Note: If a longer cable is required than was supplied, it can be ordered from the factory or made by using standard flat telephone cable, phone jack connectors and the proper crimping tool.

G. Remote mounted Display Faceplate - if operation of the Intelliswitch is desired through a remote mounted display face plate continue, otherwise skip to step H.
NOTE: Maximum mounting distance between the Display Faceplate and the unit is 20'.
The unit MUST be factory ordered with the remote mounted faceplate option.
   1. When the remote faceplate option is ordered from the factory the air door comes equipped with the blank faceplate and 12' ribbon attached. The Display Faceplate is shipped loose ready for field installation.
   2. Locate the male end of the 14-conductor ribbon cable in the wiring tray and run to the remote display loca tion. The cable is minimum CL2 rated and should not need to be in conduit.
   3. Connect the ribbon cable to the 14-pin socket with red stripe positioned on the top left when facing the front of the display board.
   4. Mount remote faceplate to the wall.

H. Reinstall the wiring tray cover.

I. For Electric, Steam and Hot Water air doors proceed to **Section VI - Field Connections** otherwise proceed to **Section VII - Operation and Controls.**

VI. FIELD CONNECTIONS

A. ELECTRICALLY HEATED MODELS
The heater circuit may be controlled by a remote thermostat or manually through the Intelliswitch located on the discharge side of the air door. Overheating protection is provided by auto reset thermal cutouts built into the heater coil assembly **(see the wiring diagram)**.

B. STEAM OR HOT WATER HEATED MODELS
Piping should be done in accordance with local codes, regulations and standard practices.
Connect the building system supply and return to the ¾" MPT nipples on the heating coil. **See Figure 8**.

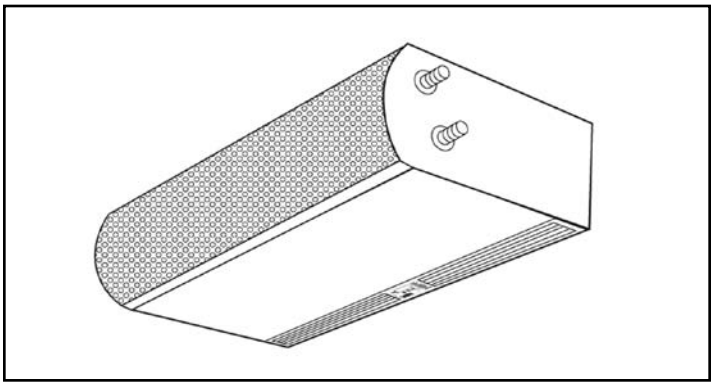

FIGURE 8 - Steam/Hot Water Connections

VII. AIRFLOW ADJUSTMENTS

A. With the air door operating and the door in its full open position, check to see that nothing is obstructing the air flow at the discharge nozzle vanes.

B. Find the air stream split location. Hold a handkerchief, by corner, approximately 12" above the floor. Gently move the handkerchief back and forth in the doorway. Make sure the air is being directed to both the inside and the outside. **See Figure 9.** The split location is indicated where the handkerchief is vertical with minimal or no fluttering.

C. Adjust the discharge nozzle vanes so the split location is approximately 3" outside the doorway. Adjust the speed controller so that the split location is approximately 12" above the floor.

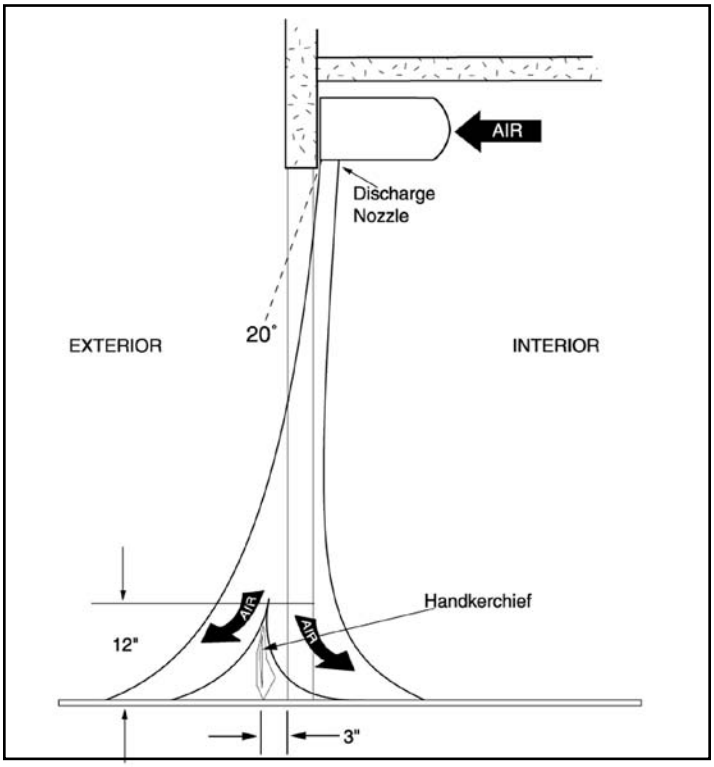

FIGURE 9 - Airflow Adjustment

VIII. MAINTENANCE AND CLEANING

CAUTION: ELECTRIC SHOCK HAZARD Disconnect power whenever servicing unit. More than one disconnect may be required to de-energize unit.

Keep your air door operating at peak efficiency by cleaning the blower wheels, motor(s) and intake grille. Buildup of dust on the blower wheels can cause vibration, noise and excessive wear on the motor bearings. The frequency of cleaning will depend on the environment where the unit is operating.

Dirty, dusty or greasy environments could require a cleaning schedule of once every two months. If the environment is not that dirty, the unit(s) should be scheduled for cleaning a minimum of once every (6) months.

To access the interior of the unit:

A. Disconnect the power to the unit; remove the intake grille by removing the locking screws on each end of the unit. Lift the intake grille up and then towards you. **See Figure 10.**
B. Remove the bottom access panel by removing the phillips head screws on the bottom of the unit.
C. Vacuum and scrape (if necessary) to remove the buildup of dirt and debris. The motor(s) are permanently lubricated and require no additional lubrication. Reinstall the cover and intake grille.
D. Switch the power on after cleaning reinstalling the cover and intake grille.

CAUTION: STAND CLEAR OF THE UNIT OR WEAR SAFETY GOGGLES AS LOOSE DEBRIS MAY BE PRESENT AND MAY EXIT THE NOZZLE.

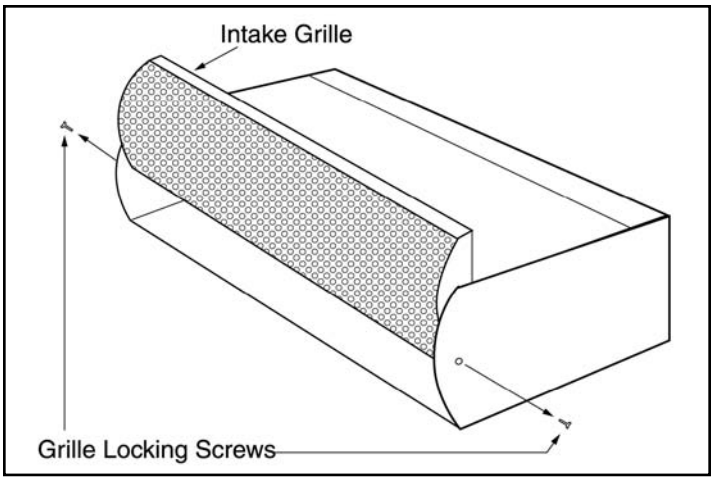

FIGURE 10- Intake Grill Removal

IX. SERVICE

CAUTION: ELECTRIC SHOCK HAZARD Disconnect power whenever servicing unit. More than one disconnect may be required to de-energize unit.

*Any service performed on the MaxAir/Zephyr air door **MUST** be done by qualified personnel.*

Berner air doors require very little servicing. All parts are easily accessible for periodic inspection and maintenance. Units should be cleaned at least twice a year. Your particular application (the amount of dirt and dust in the air) and location of the unit(s) will determine how often your unit(s) will need to be cleaned and serviced. All motors have permanently lubricated, sealed, sleeve bearings and require no maintenance. **See Figure 11**

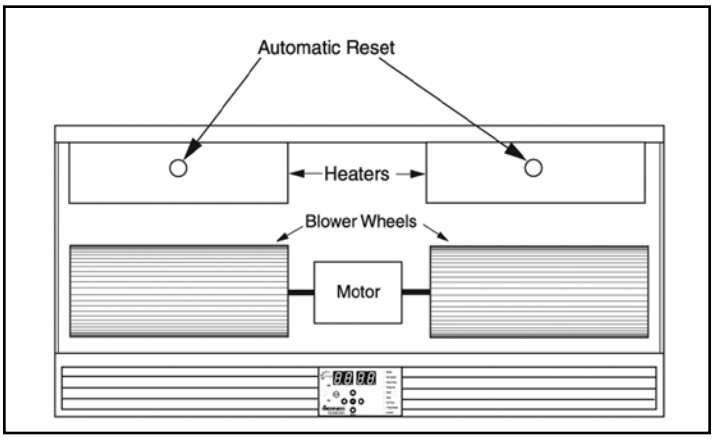

FIGURE 11 - Unit Components

A. INTELLISWITCH DISPLAY BOARD REMOVAL OR REPLACEMENT

CAUTION: Do not expose the bare board to static electricity, water, extreme heat or extreme moisture.

1. Set Intelliswitch mode to off.
2. Disconnect power to the unit.
3. Remove the two Phillips head screws from the Intelliswitch display faceplate.
4. Remove the faceplate from the unit by gently pulling it away from the unit and unplugging the ribbon cable from the back.
5. Flip the faceplate over and place it on a clean soft sur face.
6. Remove the two nuts, aluminum shield and flat washers holding the display board to the faceplate.
7. Lift display board off of the studs while leaving the stand off spacers in place.
8. Install new display board onto faceplate studs, reinstall washers with aluminum shield and attach with existing nuts.
9. Reinstall display faceplate by attaching the ribbon cable (with red stripe positioned on the top left) to the back of display board. Place the face plate against the mounting bracket, insert and tighten the two Phillips head screws.

B. INTELLISWITCH CONTROL BOARD REMOVAL OR REPLACEMENT

CAUTION: Do not expose the bare board to static electricity, water, extreme heat or extreme moisture.

NOTE: The Intelliswitch Control Board may be removed without removing the bottom access cover or transverse. However removal of the bottom access cover and transverse will simplify the process.

1. Set Intelliswitch mode to off.
2. Disconnect power to the unit.
3. Remove the two Phillips head screws from the Intelliswitch display faceplate.
4. Remove the faceplate from the unit by gently pulling it away from the unit and unplugging the ribbon cable from the back.
5. Mark and remove all wires connected to the control board.
6. Remove the two plastic push-rivets that attach the control board to the unit frame by gently prying a screw driver under the metal bracket attached to the control board.
7. Carefully maneuver the control board partially out of the unit by sliding straight down. Avoid contact between board components and the motor mount.
8. Remove the Phillips head screw that attaches the control board to the mounting bracket and ground wire and completely remove the control board from the unit.
9. Attach mounting bracket to the new control board with existing screw only on the side that does not contain the ground wire.
10. Partially insert the board into the unit and attach the second Phillips head screw and ground wire.

NOTE: GROUND RING TERMINAL MUST BE SITUATED OR BEND SUCH THAT IT DOES NOT TOUCH ANY TRACES ON THE CONTROL BOARD

11. Continue installing the new control board into the unit by carefully sliding the two tabs at the top of the con trol board into the two corresponding slots in the unit frame. Attach with new plastic push-rivets provided. Note: when the tabs of the board hit the unit frame tip the board up and angle the tabs into the slots.
12. Reconnect all wires to the control board.
13. Reinstall display faceplate by attaching the ribbon cable (with red stripe positioned on the top left) to the back of display board. Place the face plate against the mounting bracket, insert and tighten the two Phillips head screws.

C. INTELLISWITCH SPEED SENSOR REPLACEMENT

1. Set Intelliswitch mode to off.
2. Disconnect power to the unit
3. Remove the intake grille by removing the locking screws on each end of the unit. Lift the intake grille up and then away from the unit.
4. Remove the bottom access panel by removing the Phillips head screws on the bottom of the unit.
5. Remove the two Phillips head screws from the Intelliswitch display faceplate.
6. Remove the faceplate from the unit by gently pulling it away from the unit and unplugging the ribbon cable from the back.
7. Disconnect the speed sensor from the control board by locating the pin connection marked J5 and labeled PROXIMITY. Grasp the socket and carefully pull away from the control board.
8. Remove the 13 mm hex nut and washer closest to the fan from the sensor.
9. Remove the sensor.
10. Connect the new sensor to the control board; secure all loose wires from rotating parts.
11. Install new sensor into mounting bracket. Use the 13 mm nuts to position the tip of the sensor a maximum of 1/16" (2 mm) away from the rotating trigger located on the motor shaft. When the unit is energized, the LED on the back of the sensor will illumi nate when the trigger passes if the correct distance has been set.

CAUTION: Do not mount the speed sensor too close to the trigger, the sensor will be ruined if it is struck by the trigger.

12. Reinstall display faceplate by attaching the ribbon cable (with red stripe positioned on the top left) to the back of display board. Place the face plate against the mounting bracket, insert and tighten the two Phillips head screws.
13. Reinstall remaining components in reverse order of removal.

D. INTELLISWITCH SPEED SENSOR ADJUSTMENT

1. Set Intelliswitch mode to off.
2. Disconnect power to the unit
3. Remove the intake grille by removing the locking screws on each end of the unit. Lift the intake

grille up and then away from the unit.
4. Remove the bottom access panel by removing the Phillips head screws on the bottom of the unit.
5. The speed sensor is held in with two 13 mm hex nuts and a star washer.
6. Use the 13 mm nuts to position the tip of the sensor a maximum of 1/16" (2 mm) away from the rotating trigger located on the motor shaft. When the unit is energized, the LED on the back of the sensor will illumi nate when the trigger passes if the correct distance has been set.

CAUTION: Do not mount the speed sensor too close to the trigger, the sensor will be ruined if it is struck by the trigger.

7. Reinstall remaining components in reverse order of removal.

E. INTELLISWITCH TEMPERATURE SENSOR REPLACEMENT

1. Set Intelliswitch mode to off.
2. Disconnect power to the unit.
3. Remove the wiring tray cover.
4. Cut necessary cable ties that may be holding the brown temperature sensor lead.
5. Disconnect the temperature sensor from the socket.
6. Install new temperature sensor and all necessary cable ties.
7. Reinstall remaining components in reverse order.

F. FAN AND MOTOR REMOVAL

1. Set Intelliswitch mode to off.
2. Disconnect power to the unit.
3. Remove the intake grille by removing the locking screws on each end of the unit. Lift the intake grille up and then away from the unit.
4. Remove the bottom access panel by removing the Phillips head screws on the bottom of the unit.
5. Free the fan bearing retainer bracket(s) by loosening the Phillips head screw lock located on the inside unit end plate(s). Rotate them out of the way to allow the fans to be removed.
6. Remove the transverse by removing the four (4) 5/16" hex washer head bolts.
7. Rotate the speed sensor bracket away from the motor by removing the Phillips screw farthest from the motor and loosening the second Phillips screw. Do not remove the speed sensor from the bracket.
8. Unplug motor harness from motor and remove necessary wiring.
9. Using a 1/8" Allen wrench, loosen each set screw attaching fan(s) to motor.
10. While holding the motor in place, loosen and remove the motor clips.
11. Slide the fans toward the motor so that the ball bear ings on the outer fan shaft are exposed.
12. Slowly roll the motor out of the motor mount cradle forward and down. The hubs of the fans are flexible enough to allow the motor to move before the fans' outer ball bearings pull out of the unit.
13. If the unit equipped with an intelliswitch, remove the trigger bar from the motor shaft with a 5/64" Allen wrench.
14. Install the trigger bar on the replacement motor so that it is not closer than 0.030" to the motor bearing cap (including shaft movement).
15. Ensure the trigger does not contact the speed sensor. Maximum gap distance between trigger and sensor is 1/16" (2mm).
16. Reinstall in reverse order of removal.

G. REPLACEMENT OF ELECTRIC HEATER ELEMENT

1. Disconnect power to the unit; remove the intake grille by removing the locking screws on each end of the unit.
   Lift the intake grille up and away from the unit.
2. Remove the bottom access panel by removing the Phil lips head screws on the bottom of the unit.
3. Remove and mark all wires from damaged element.
4. To remove damaged element from unit, drill out rivets and remove screws.
5. Install new element and connect all wires.
6. Reinstall cover and intake grille.

How to operate your MaxAir & Zephyr Air Door
that comes with a factory installed digital programmable controller called the Intelliswitch™

INTELLISWITCH™ QUICK START OPERATION

www.intelli-how2.com

When power is turned on to the Air Door, all of the lights on the display will light briefly while the Intelliswitch™ starts up. After startup the clock will then display. The Intelliswich is now ready to set.
NOTE: To adjust the clock, refer to section 4.5 Appendix A.

To operate the air door:

	Press the Down Arrow (Menu) button once. NOTE: If the Down Arrow button is pressed twice, the function will change from "Mode" to "Fan Speed".	Mode/Fan Speed indicator will light
	Using either the Left or Right Arrow buttons, scroll through the **Modes of Operation** until you reach the desired mode. *See below to determine which mode is right for you.*	

For detailed information of the Intelliswitch™ Navigation and Operation please refer to Appendix A (see pages 12-18)

	Once the Mode of Operation is selected, press "OK" button to set and return to the clock or the down arrow to select and adjust any of the other available settings.	

Mode of Operation:

OFF	The unit will not run.	
ON	The unit will run continuously unless a start and stop time is programmed.	

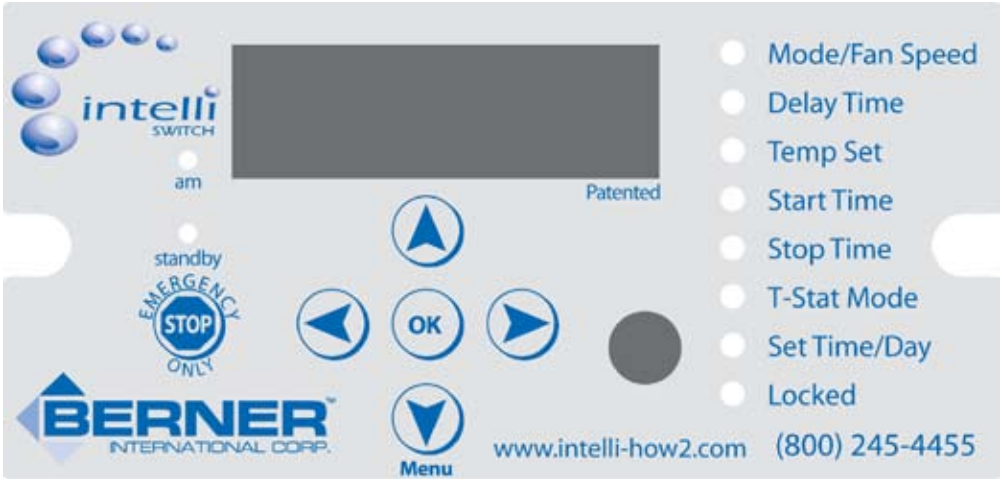
The following modes can be customized see "Programming the Intelliswitch" for more info.

AUTO	For use with a door switch, the unit will operate only when the door is open.	
"delu" DELUXE	For use with a door switch, the unit will operate only when the door is open with a minimum 1 minute delay before turning off when it closes.	

Modes of Operation continued:

The following modes can be customized see "Programming the Intelliswitch" for more info.

"PluS" COMFORT PLUS	For use on heated units only, requires a door switch. When the temperature drops below the thermostat set point and the door is closed, the unit will activate on a low speed and provide supplemental heating to the space. The unit will change to normal speed when the door is open. If the thermostat is still not satisfied when the door closes the unit will return to low speed until the set point is reached.	PLUS
"Pro1" PROGRAM 1	Recommended for unheated units. This setting will enable the air door to operate on Deluxe mode with a 1 minute time delay, 24 hours a day, 7 days a week. See Appendix A page 18 for more detailed information.	PRO1
"Pro2" PROGRAM 2	Recommended for heated units. This setting will enable the air door to operate on Deluxe mode with a 1 minute time delay from 8:00 am – 5:00 pm. From 5:01 pm – 7:59 am, the unit will operate on Comfort Plus with a 30 second time delay. See Appendix A page 18 for more detailed information.	PRO2
"Pro3" PROGRAM 3	Recommended for heated units. This setting will enable the air door to operate on Auto mode with a 30 second time delay, 24 hours a day, 7 days a week. See Appendix A page 18 for more detailed information.	PRO3



INTELLISWITCH™ FAQ's (Frequently Asked Questions)

www.intelli-how2.com

WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK OR INJURY TO PERSONS, OBSERVE THE FOLLOWING: Before servicing or cleaning unit, switch power off at service panel and lock the service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.

Even though every MaxAir/Zephyr unit is individually tested at the factory before shipment, on occasion improper functionality may be experienced. Here is a list of common questions:

Q. Why can't I change my settings?
A. The Intelliswitch™ may be locked. If the Lock light is illuminated, the control is locked. To unlock, press and hold the left & right arrows simultaneously for 5 seconds. The Lock mode can also be protected with a PASScode. If the PASScode option is on, an attempt to unlock the control will display PASS and then a 0000 prompt. A four-digit code (available in the installation instruction book Appendix) must then be entered to unlock the control. Use the up and down arrows to select a number and the left and right arrows to select the digit to edit. Press OK when done. Note: If the AutoLock setting is on, the control will re-lock if there is no activity after 5 minutes.

Q. Why won't my heat work, even though fans are running?
A. The thermostat(s) or speed sensor may need adjusted or replaced.
1.) Make sure that the thermostat probe and/or remote thermostat are in the "On" position and set above ambient (room) temperature.
2.) Check internal and external thermostat status in the Diagnostics Menu for a faulty thermostat. To do this, hold the right arrow for five seconds until DIAG appears, then arrow down to the ts setting, if it displays "1" then the thermostat(s) is working (there is a call for heat).
3.) If no external thermostat is used, check to see if the internal probe is attached to the control board. Disconnect power to the unit, remove the display board and check that the beige sheathed cable is attached at both ends. If the thermostat(s) and settings are correct and you are still not getting heat, then check to see the fan speed. to do this, press the down arrow to reach the Mode/Fan speed setting. Use the right and left arrow to change the fan speed.
4.) Check to see if you can adjust the fan speed. If the speed sensor is bad there will be no speed control and the Intelliswitch will not let the heat come on. If it is too difficult to determine a change in speed, the speed sensor can be checked by entering the DIAG menu and checking the first error code. If ER 10 displays, the speed sensor is recognized by the Intelliswitch. If the code ER 11 is displayed, the Intelliswitch does not recognize the sensor, and it may be faulty or need adjusted closer to the trigger bar. Turn off the power to the unit and remove the screen to check the distance between the sensor and the trigger located on the left side of the motor (use the bottom access cover for steam/hot water heated units). The sensor should be less than 1/16" from the trigger face. Check distance at both ends of trigger. Adjust if necessary.
5.) If there is still no heat or speed control, you may need a new speed sensor: consult factory.

Q. Why won't the Intelliswitch light up?
A. There may not be power to the control.
1.) Check to see if the main power is turned on to the unit. Your air curtain may have multiple disconnects, be sure all are turned on.
2.) Verify that there is power to the board. **NOTE: ONLY QUAILIFED PERSONS SHALL CHECK POWER IN THE UNIT WITH THE POWER ON.** The power terminals are located directly behind the display. Remove two Phillips screws from the Intelliswitch display to expose the power terminals and check the line voltage at spade terminals L2 and 120, 208 or 240 (depending on the voltage supplied to the unit).
3.) Check the ribbon cable connections to the display board for a loose connector or improperly connected cable (see Installation Instructions for correct cable connection).
4.) If display still doesn't light, unplug the speed sensor and thermostat probe (if a heated unit) from the control board. If the display lights, plug one component back in at a time to see which one may be shorted. The faulty component will make the display go blank again.
5.) If there is line voltage power at the board terminals, the ribbon cable is correctly connected, the speed sensor and the thermostat are working, and it is still not working, you may need a new circuit board: consult factory.

Q. Why won't my fans shut off?
A. The Intelliswitch may be in the wrong mode or mis-wired.
1.) Check to see if the control is in the "ON" mode, if it is, then change the Mode to another setting.
2.) The T-Stat Mode may be set to the "both" setting and the thermostat is calling for both Fan and Heat, change the T-Stat Mode to "HEAT".
3.) If there is a door switch and the unit is in a mode that is activated by it, there could be a short, mis-wiring or mixup in components. Close the door and check the door switch status in the Diagnostics menu. Hold the right arrow for five seconds until DIAG appears, then arrow down to the ds setting, if it displays "1" then the door switch signal is closed (there is a call for fan). If the door is closed, the signal should be "0" or open.
4.) There could be a short in the field connections to the door switch or the door switch leads could be mis-wired. To test, disconnect the door switch connection at the unit. Opening the wiring tray on top of the unit and be cautious of high voltage connections. Disconnect the blue wires labeled 9 & 10 from the field wiring to the door switch or make sure they are not tied together. There is no danger of getting shocked because the signal is 5 volt dc. Be sure not to touch the blue wires to anything metal (or grounded). The unit should shut off when it is in

any mode that is activated by the door switch.
5.) If the air curtain is heated, make sure that the thermostat isn't wired to the door switch leads. Door switch leads are blue and labeled 9 & 10.

Q. How can I check the door switch to be sure it's working?
A. The Intelliswitch may be in the wrong mode, be mis-wired or have a faulty door switch.
1.) Test the wiring and controller function at the same time first. Locate the door switch and open its wiring compartment by removing the two screws holding on the back cover. There should be two wires connected to screws inside the switch. There is no danger of getting shocked because the signal is 5 volt dc. Be sure not to touch the wires to anything metal (or grounded). Either disconnect both wires from the screws (noting which screws the wires are under) and touch them together (with air curtain in "Auto" mode) or make a short jumper wire and touch the jumper to both screws at the same time to see if air curtain comes on. If it does, the controller and wiring work.
2.) If the wiring and unit pass the function test, the problem could be either misalignment or a faulty door switch. On a magnetic reed switch check for magnet alignment, for plunger/roller type switch, check contact engagement with door.
3.) If you have access to an electrical test meter, the door switch contacts can be tested for continuity when the door switch wires are disconnected from the unit.

Q. Why won't my heat shut off?
A. The Intelliswitch may need adjusted, have been mis-wired or have a faulty thermostat.
1.) Heat is activated by one of two thermostat connections. To test the internal thermostat set the external thermostat to OFF. The settings of the unit mounted thermostat probe are accessed through the display. Press the down arrow until the Temp Set indicator lights up; check if the temperature setting and unit of measure are correct. Test to see if it shuts off by setting the thermostat temperature to OFF or lower than the room temperature.
2.) If an external thermostat is connected to the unit, there could be a short in the field connections or the thermostat leads may be mis-wired. To test the external thermostat set the internal thermostat to OFF. Disconnect the external thermostat connections at the unit. Open the wiring tray on top of the unit and be cautious of high voltage connections. Disconnect the orange wires labeled 6 & 7 from the field wiring to the thermostat or make sure they are not tied together. There is no danger of getting shocked because the signal is 5 volt dc. Be sure not to touch the orange wires to anything metal (or grounded). The heat should shut off when the wires are separated.
For more complex troubleshooting of either thermal cutouts or heater contactors, please consult a qualified electrician or the factory.

Q. Why didn't the Intelliswitch save the changes I made to a program?
A. If a program is active (a dot is illuminated by one of the clock digits), changes can be made to any settings on the User Menu. These changes however will only remain in effect until the program changes to the next time zone. To make changes permanent, settings must be changed in the program from the Program Menu. Access the Program Menu by holding down the left arrow for 5 seconds until "PRO" is displayed. Arrow down to select programming and arrow left to select the program to edit. Use the down arrow to step through the options and make changes as desired. Continue to press the down arrow until Stor is displayed. Press OK or down to keep or store the changes.

Q. How do I undo a change that I made to a program in the Program Menu?
A. Changes to programs cannot be undone. The programs can however be reset to the factory default settings. This must be done on the Factory Menu. Access to the Factory Menu is attained through the Diagnostics Menu. Press and hold the right arrow for 5 seconds until "DIAG" is displayed. From the "DIAG" display press and hold the up and down simultaneously for 10 seconds until "FACT" is displayed. Use the down arrow to select "DEFn" on the display then use the right arrow to select "DEFP". Press "OK" to reset. The control display will go blank then blink as confirmation.

Q. My air curtain won't turn on?
A. Check the AM/PM setting on the Start and Stop times or the clock (considering the AM indicator light whensetting values). Note: set the start time and stop time to the exact time for the unit to be active full time. Check to see if a program is active that may have different start/stop times than those expected.

Q. My building has a Building Management System, can the Intelliswitch work with a BMS?
A. The Intelliswitch can be controlled by a Building Management System (BMS) but currently does not have the ability to communicate with them. Dry contacts on the BMS may be used to control the unit activation through the door switch connections (blue wires 9 & 10) and the heat activation thought the remote thermostat connections (orange wires 6 & 7). Consult factory.

A. PROGRAMMING THE INTELLISWITCH™

To reduce the risk of injury and ensure proper operation all Notes and instructions shall be read!

Note: The STOP button (STOP) is available at all times and immediately stops the unit for an emergency situation. The Intelliswitch® will display STBY for Stand By when selected. To release the control from STBY press STOP again. When the control is released from STOP it will be in the OFF Mode. Press the left or right arrows to select new Mode or OK to return to the clock.

Note: When changing options, if there is no activity for 15 seconds, the control will save changes and default back to the User Menu display clock.

Note: The OK button (OK) always saves the current entered value and returns you to the User Menu display clock.

Section 1: Quick Start Reference
Section 2: Arrow Navigation
Section 3: Menu Structure
Section 4: User Menu
Section 5: Program Menu
Section 6: Diagnostic Menu
Section 7: Factory Menu
Section 8: External Connections

1. Quick Start Reference

1.1. Press the Menu button (down Arrow).

1.2. Using the left and right arrows, select the operating Mode: Off, On, Auto, Deluxe, Comfort Plus or Program Number 1, 2 or 3.

1.3. Press OK.

2. Arrow Navigation

The up and down arrows (▲)(▼) select the menu options. The left and right arrows (◄)(►) change values for single-level menu options (Mode, Speed, Temp Degree, Temp Set, T-stat Mode and Day) or are used to enter into multi-level menu options (Delay Time, Temp Set, Start Time, Stop Time and Set Time).
Arrow sequence and available settings are illustrated under each option.

2.1. Single Level Options

Single level options can change values directly with the left and right arrows. No additional actions are necessary to access these option settings.

2.2. Multi-level Options

Multi-level options require additional actions to access an options setting. The right or left arrow is required to enter into an option.

If the multi-level option has **one** value to edit it may be changed directly with the up and down arrows.

If the multi-level menu option has **two** values (such as a time value) the first option value flashes upon selection. Use the left or right arrow to select which value to change and then use the up and down arrows to change the option value. See the Menu Options section for the option increment i.e. hours/minutes, minutes/seconds.

To leave a multi-level option, use the left or right arrow to cycle through the option value until it stops flashing. The up or down arrow may now be used to navigate to the other options.

3. Menu Structure

The Intelliswitch™ has four menus:

- User Menu (Section 4)
- Program Menu (Section 5)
- Diagnostic Menu (Section 6)
- Factory Menu (Section 7)

The **User Menu** is the top level menu where values for each option is entered based on the Mode selected. Each option is identified by a green light when selected. The clock display is the default home position for the User Menu when OK is selected or there is no activity for 15 seconds.
Note: Access to all Secondary Menus must originate from the User Menu. Secondary Menus are identified by the menu title upon successful entry, e.g. PRO, DIAG and FACT.
The **Program Menu** is used to edit all program option parameters.
The Diagnostic Menu is used to diagnose and troubleshoot errors with the Intelliswitch™.
The Factory Menu is only to be used when directed to reset or change factory default settings.

4. User Menu

To enter into the User Menu press the down arrow (menu) or up arrow. Use the down or up arrow to step through each option. Each option is identified by a green light when selected.
Options available from the User Menu are:

- Mode
- Fan Speed
- Delay Time
- Thermostat degree type
- Thermostat Set Point
- Start Time
- Stop Time
- Thermostat Control Mode
- Time Set
- Day Set
- Lock/PASScode

4.1. Mode: single-level (◄)(►)

↳OFF-ON-AUTO-DELU-PLUS-PRO1-PRO2-PRO3↰
Use left or right arrows to select the desired Mode of Operation. Press "OK to accept selection.

- **OFF** – air door off.
- **ON** – air door will run when start/stop time is satisfied.

- **AUTO** – air door will run when terminals 9 & 10 are connected through a switch (i.e. doorswitch) and the start/stop time is satisfied, ALL menu options available.
- **DELU** – air door will run when terminals 9 & 10 are connected through a switch (i.e. doorswitch) and the start/stop time is satisfied, MUST set time delay from 1-10 minutes, T-Stat Mode NOT available.
- **PLUS** - air door will run when terminals 9 & 10 are connected through a switch (i.e. doorswitch) and the start/stop time is satisfied, when door is closed and temperature drops below the set point the air door will run on low speed with heat (low speed set on the Program Menu), air door will run at higher user level set speed when the door opens.
- **PRO1** – Runs Program #1; see Program Menu Section, 1st digit indicator light when active.
- **PRO2** – Runs Program #2; see Program Menu Section, 2nd digit indicator light when active.
- **PRO3** – Runs Program #3 see Program Menu Section, 3rd digit indicator light when active.

NOTE: When Program Modes are selected changes can only be made to the Mode, Time Delay, Temperature, Time and Day settings. Changes will only remain in affect until the program changes between active time zones.
NOTE: AutoLock, Comfort + Low Speed and PASSCode are global options and their settings are the same for any Mode selected. They will not change when the Mode or Program changes.

4.2. Fan Speed: single-level ◄►
SP ↳ 1-2-3-4-5-6-7-8-9-10 ↰
Use left & right arrows to select fan speed from 1 to 10. (1=low, 10 = high)

4.3. Delay Time: multi-level – min/sec ►▲▼
↳ OFF – 00:01 thru 10:00 ↰
Select option with right arrow, use up & down arrows to set the amount of time that the air door will delay shutting off after terminals 9 & 10 or doorswitch are opened.

4.4. Temp Set (air doors): single level ◄►
↳ °F – °C ↰
Use left & right arrows to select the temperature degree type, Fahrenheit or Celsius, for thermostat set point.
Note: This option is only available for heated units with a built-in thermostat.

4.5. Temp Set : single level ◄►
↳ OFF – 34°F thru 90°F ↰
or
↳ OFF – 1°C thru 32°C ↰
Use left & right arrows to select the temperature set point when the heat is to be activated.
Note: This option is only available for heated air doors with built-in thermostat.

4.6. Start Time: multi-level – hours/min ►▲▼
Select this option with right arrow, use up & down arrows to set the time that the unit is to turn on in the ON Mode or become active for AUTO, DELU and PLUS Modes
Note: To turn off this feature the Start Time must be set equal to Stop Time (including am/pm).

4.7. Stop Time: multi-level – hours/min ►▲▼
Select this option with right arrow, use up & down arrows to set the time that the unit is to turn off in the ON Mode or become active for AUTO, DELU and PLUS Mode.
Note: to turn off this feature the Start Time must be set equal to Stop Time (including am/pm).

4.8. Thermostat Mode: single level ◄►
↳ HEAT-BOTH ↰
Select the control mode for the built-in and remote thermostats. The **HEAT** mode only cycles the heater on call for heat from either internal or external thermostats when the fan is running. BOTH mode cycles both the fan and the heater on a call for heat from either internal or external thermostats.
Note: This option is only available for electric heated air doors with built-in thermostat or air doors with external remote mount thermostat connected between terminals 6 & 7.

4.9. Set Time: multi-level – hours/min ►▲▼
Select option with right arrow, use up & down arrows to set the clock. Note: time does not adjust for daylight savings time.

4.10. Set Day: single level ◄►
↳ DAY1-DAY2-DAY3-DAY4-DAY5-DAY6-DAY7 ↰
Use left & right arrows to select day of the week, where Sunday = DAY1, Monday = DAY2, etc. Used as a reference by programs.

4.11. Lock/Unlock ◄►
The Intelliswitch™ can be locked to prevent unauthorized tampering of the settings.
When locked, only the options on the User Level may be viewed. Only the Mode can be changed between OFF and the Mode that was active when it was locked, all other options may NOT be changed.
To lock or unlock, press and hold the left and right arrows simultaneously for 5 seconds, the Locked light will illuminate.
If the PASScode option is ON, an attempt to unlock the control will display PASS and then a 0000 prompt to enter a four digit unlock code. Use the up & down arrows to change the numbers and the left & right arrows to move between positions.
Note: When the AutoLock option is set to ON in the Program Menu, the Intelliswitch™ will automatically lock after 5 minutes without any activity. Default setting – OFF. See Section 5.2
Note: When the PASScode option is set to ON in the Factory Menu, the Intelliswitch™ will require a code be entered to unlock the control. Default setting – OFF. See Section 7.4.

5. Program Menu

To enter into the Program Menu hold down the left arrow for 5 seconds. **PRO** will display when the Program Menu is available. Use the Program Menu to set the following options:
- Program 1, 2 & 3 settings
- AutoLock setting
- Comfort Plus low speed setting
- Master/Slave Stand By setting

↳ PRO-AULC-PLUS-STBY ↰
Program Menu – single level ◄►
Use left & right arrows to select the option to change.

5.1. Program
The Intelliswitch™ can store up to three Dual-Tine Zone programs. Use the Program option to select and save User Menu settings to be recalled at anytime.
A time zone is the period of operation defined by the use for the unit to be active. Both zones may operate one after the other or have gaps between them.

The Program menu allows parameters for the following options to be set:

- Number of Zones: 1 or 2
- Days of the week to operate per zone
- Mode (Off-On-Auto-Deluxe-Plus)
- Speed
- Time Delay
- Thermostat Set Point
- Start Time
- Stop Time
- Thermostat Mode

To enter into the Program menu press the down arrow (menu button) at the **PRO** display. Use the left & right arrows to select the program to be edited.

↳ PRO1-PRO2-PRO3 ↰

Note: After setting the number of zones and active days all parameters are set the same as the User Menu. Use the Up and Down arrows to accept changes and OK to return to User Menu.

5.1.1. Zone: single level ◄ ►

↳ Zn 01-Zn 02 ↰

Select the number of Zones for the program. If **one** zone is selected a prompt will ask to save settings after the last option. If **two** zones are selected, Zone1 parameters will be set first and then parameters for Zone2 will be set. A prompt will ask to save settings after the last option of Zone2.

5.1.2. Day: multi-level ► ► ▼ ►

↳day-day1-day2-day3-day4-day5-day6-day7 ↰

Select the days of the week that the program is to operate for each zone.
When **day** is displayed, press the right arrow to enter into the day parameters.
Once in the day parameters each day is identified by the day number, use the right or left arrows to select **yes** to active a day or **no** to deactivate a day.

↳ dy 1n-dy 1y ↰
↓
↳ dy 2n-dy 2y ↰
↓
↳ dy 3n-dy 3y ↰

Use the up and down arrows to move to the next day or skip days until **day** is displayed.
From this point enter right to re-enter day settings or down to continue.
Note: The top seven LED's will light from the top down representing days 1 thru 7 that have been activated.

5.1.3. Mode: single level ◄ ►
Select operating mode for Zone. Only Off, On, Auto or Plus are available.

5.1.4. Fan Speed: single level ◄ ►
Select the fan speed for the time zone being programmed.

5.1.5. Time Delay: multi-level ► ▲ ▼
Set the time delay for the time zone being programmed.

5.1.6. Temperature Set: single level ◄ ►
Set the temperature set point for internal thermostat for Zone being programmed. Degree type is based on degrees selected on the User Menu.

5.1.7. Start Time: multi-level ► ▲ ▼
Set start time for zone program to activate including am/pm.

Note: Zone 1 has priority over Zone 2 and if conflicting times are entered Zone 1 will always activate and take precedence over Zone 2.

5.1.8. Stop Time: multi-level ► ▲ ▼
Set stop time for zone program to activate including am/pm.

Note: Zone 1 has priority over Zone 2 and if conflicting times are entered Zone 1 will always activate and take precedence over Zone 2.

5.1.9. Thermostat Mode: single level ▲ ▼
Set thermostat mode for Zone.

5.1.10. Store: single level ► ▲ ▼

↳ str y-str n ↰

Use the right or left arrows to select **yes** to save program or no to abandon changes.
A single zone program will prompt to save all options after the first set of parameters; a dual zone program will prompt to save after the second set of parameters.
Note: upon saving, the LED on the digit light corresponding to the program number will blink.

5.2. AutoLock: multi-level ▼ ◄ ►

↳ ON-YES ↰

To enter into the AutoLock menu press the down arrow (menu button) at the **AULC** display. Use the left or right arrows to select **ON** to have control automatically lock if there is no activity for 5 minutes or **OFF** to deactivate.

5.3. Comfort Plus (fan speed): multi-level ▼ ◄ ►

SP ↳1-2-3-4-5-6-7-8-9-10 ↰ see Note*

To enter into the Comfort Plus low speed setting, press the down arrow (menu button) at the PLUS display. Use the left or right arrows to select the fan speed for the PLUS mode, when the door is closed and the thermostat set point is reached.
***Note: The speed range is limited to be equal to of less than that of the User Menu speed setting.**

5.4. Master/Slave Stand By: multi-level ▼ ◄ ►

↳ **ind-ALL n** ↰

To enter into the Master/Slave stand by setting press the down arrow at the **STBY** display. Use the left or right arrows to select the STOP button behavior when units are connected together in a Master/Slave configuration. Select "ind" or independent to stop only the unit where STOP is pressed. Select "ALL" to stop all connected units.

6. Diagnostic Menu

To enter into the Diagnostic Menu hold down the right arrow for 5 seconds. **DIAG** will display when the Diagnostic Menu is available.
The Diagnostic Menu is used to diagnose and troubleshoot Intelliswitch™ errors. Only "live" parameter settings are displayed, there are no options to change.

The Diagnostic Menu displays the following parameters:

- Software version release
- Speed Range Setting
- Internal Thermostat reading – Celsius
- Internal Thermostat reading – Fahrenheit
- Motor rpm reading
- Supply Voltage Frequency
- Door Switch status
- External Thermostat status
- Heater Relay status
- Error Code 1 – Speed Sensor
- Error Code 2 – Line Frequency
- Error Code 3 – Power Issue
- Error Code 4 – Motor Off Fault

6.1. Software Release Version – Format: rX.XX
6.2. Fan Speed Range – rn XX (see Section 7.1)
6.3. Thermostat Probe – Pr XX (see Section 7.2)
6.4. Internal Thermostat – °C (np = no probe)
6.5. Internal Thermostat – °F (np = no probe)
6.6. Motor RPM – measured speed in rpm
6.7. Supply Voltage – measured frequency in Hz
6.8. Door Switch Status – 0=open, 1=closed
6.9. External T-stat Status – 0=open, 1=closed
6.10.Heater Relay Status – 0=open, 1=closed

6.11.Error Codes
The Intelliswitch has six error codes, 1 through 6, to help troubleshooting. The status of 1-4 can be observed from the Diagnostic Menu. The format for displaying the error code is the "Er" descriptor and a two digit code. The first digit is the error number and the second digit is the status using international convention. 0 = inactive, 1 = on or active.

6.11.1. Error Code 1 – Speed Sensor
Er 10 – Prox Sensor or Speed feedback exists
Er 11 – **NO** Prox Sensor or Speed feedback
Solution – check to see if the proximity sensor (located next to the motor) is connected to the control board and check distance between tip and trigger bar is approximately 1/16 of an inch.

6.11.2. Error Code 2 – Line Frequency
Er 20 – power supply line frequency exists
Er 21 – undetermined supply line frequency
Solution – The Intelliswitch automatically senses line frequency. In the event that it can not determine the proper line frequency, it will run at full speed and flash error. Manually set the line frequency in the FACT menu. See Section 7.5.

6.11.3. Error Code 3 – Zero Cross/Power Issues
Er 30 – clean power exists
Er 31 – poor power exists, electrical noise
Solution – When the control encounters "noise" in the electrical power supply it will run at full speed and flash error code. There are no internal changes available. Have the electrical system checked for problems.

6.11.4. Error Code 4 – Speed Feedback
Er 40 – proper motor and sensor operation
Er 41 – Motor off but receiving prox/speed sensor feedback
Solution – this is usually the result of a failing motor control component on board that cannot be serviced. A replacement board is required.

6.11.5. Error Code 5 – Corrupted Memory Setting
Er 51 – Status of this error is not available. It only appears when there has been an event that has corrupted the settings in memory. When corrupted settings are identified the control will reset all settings (except for Speed Range) back to Factory default values. Because some speed ranges are not compatible with all motors, the proper value cannot be automatically set and therefore requires user input. This is prompted by the scrolling "Set FACt SPEEd" on the display.
Solution – press the "OK" button. This will open the range setting identified by "rn". Select the correct speed range (see Section 7.1) based on the Series/Model. Press "OK" button.

6.11.6. Error Code 6 – Incompatible Speed Range for Master/Slave Operation
Er 61 – Status of this error is not available. It only appears when unit are connected in a Master/Slave configuration that do not have identical Speed Range settings.

If two units are connected without equivalent speed ranges, every time a button is pressed on the Master unit (the unit used to make setting selections) the Slave unit will display an "Er 61" and the Slave will ignore the command to protect the control from damaging the motor.

Solution – Enter the Factory Menu to select the proper Speed Range (See Sections 7 and 7.1)

Note: This error does not monitor if the correct speed range has been selected for a Series/Model. Only that two or more units have been connected that do not have equivalent speed ranges.

Note: Once the correct speed ranges are selected and the controls accept commands from one another, the controls should be synchronized by simply cycling through all of the settings on the User Menu using the up or down arrows. None of the settings need to be changed.

7. Factory Menu – Service Personnel Only
The Factory Menu must be entered from the DIAG header. To enter into the Factory Menu hold down the right arrow for 5 seconds. **DIAG** will display when the Diagnostic Menu is available. From the DIAG display, press and hold the up and down arrows simultaneously for 10 seconds. **FACT** will display when the Factory Menu is available.
Note: When the Factory Menu is accessed it automatically shut the unit off by changing the Mode to OFF.
The Factory Menu is used to change or reset core settings to change base functions or resolve Intelliswitch™ errors.
The Factory Menu allows parameters for the following options to be set:

- Speed Range Setting
- Restore Factory Default Settings
- Reboot Software
- PASScode
- Supply Voltage Frequency

To enter into the Factory Menu from the header press the down arrow. Use the left & right arrows to change setting values. Use the OK button select action and return to the User Menu.

7.1. Speed Range: single level ◄►
rn ↳ 0 – 1 – 2 – 3 – 4 – 5 – 6 – 7 – 8 – 9 – 10 -11 – 99 ↰
Select the fan speed range from 0 to 11 using the left or right arrows. The speed range for each unit is located on the unit wiring diagram called out in a box in the Intelliswitch® schematic by "SPEED rn __".

Note: Selecting the incorrect speed range can damage the motor(s) beyond repair and potentially create abnormally high temperatures.

Speed ranges are dependent upon the air curtain Series, motor type and heat option.
MAX/ZPR (1/5 hp) – all voltages use ranges 0-2
Available ranges are:
0 = ambient – variable 10-speed, 600 rpm to full
1 = ambient – variable 10-speed, 1050 rpm to full
2 = heated – variable 10-speed, 1250 rpm to full
3 = ambient – full on, no adjustment
4 = heated – full on, no adjustment (monitored)
5 = heated – full on, no adjustment (not monitored)
6 = ambient – multiple 3-speed, ITC relay control
7 = heated – multiple 3-speed, ITC relay control
8 = ambient – variable 3-speed, 1250 rpm to full
9 = heated – variable 3-speed, 1250 rpm to full
10 = ambient – multiple 2-speed, ITC relay control
11 = heated – multiple 2-speed, ITC relay control
99 = lock out – scrolling request for user input

7.2. Thermostat Probe Mode: single level

In **"St" (Standard) mode** the lowest operating point for the thermostat probe is 34°F (1°C). Below this temperature there will be no call for heat and "nP" (no Probe) will display on the diagnostics menu.
In **"Cd" (Cold) mode** the thermostat will operate below 34°F (1°C) but disables the "nP" (no Probe) feature and will call for heat on a probe failure or if it is disconnected.
St - Standard mode, locks out below 34°F (1°C). **Cd** - Cold mode, works below 34°F (1°C).

7.3. Restore Factory Default: single level

DEF ↳ n – U – P – A – t ↰
If it is necessary to restore any of the controls settings back to the factory defaults, select DEF using the down arrow. Select the factory setting restore type using the left or right arrows. This will reset the option settings back to the factory default settings. Available selections are:
DEFn – no changes
DEFU – reset User Menu ONLY settings
DEFP – reset Programs ONLY settings
DEFA – reset ALL settings (user and program)
DEFt – set controller to factory TEST parameters

7.4. Reboot Software: single level

↳ reb y – reb n ↰
If an error occurs that can be fixed by rebooting the control software, select **REB** using the down arrow. Select **YES** or **NO** to reboot the control.

7.5. PASScode multi-level

↳ PAS y – PAS n ↰
Select y to enable the PASScode feature and n to disable. When active, the PASScode feature requires that a four digit code be entered to unlock the control. The code is: **2376**

7.6. Line Frequency: single level

↳ Fr Au – Fr 60 – Fr 50 ↰
The Intelliswitch® default is to automatically sense the line voltage frequency. If it cannot be determined automatically, the line frequency may be manually selected.
Au – Automatically Sense
60 – 60 Hz power supply
50 – 50 Hz power supply

8. External Connections

There are three types of external connections available on the Intelliswitch™.
- Door Switch
- External Thermostat
- Serial Connection

8.1. Auto Mode Activation

When terminals 9 and 10 in the junction box are connected (closed), the Auto, Deluxe, Plus and Programmable Modes are activated. The Intelliswitch™ uses a low 5 volt DC voltage signal to monitor contact closure.

8.1.1. Door Switch (limit switch)

The door or limit switch is used in conjunction with the Auto, Deluxe, Plus and Programmable Modes to signal that the door is open. Connect the door or limit switch to terminals 9 and 10 in the air door junction box.

8.1.2. Building Management System

A building management system or dry contact closure can be used to activate the air door through the Auto, Deluxe, Plus and Programmable Modes. Connect applicable contacts to terminals 9 and 10 in the air door junction box.

8.2. Heat Mode Activation

When terminals 6 and 7 in the junction box are connected (closed), the Heat Mode is activated for all Operating (On, Auto, Deluxe, Plus and Programmable) Modes. The Intelliswitch™ uses a low 5 volt DC voltage signal to monitor contact closure.
If the internal thermostat is left on, the external heat mode will operate in parallel to contact closure, allowing either one to activate the heat. If the internal thermostat is turned off the external heat mode will activate independently to activate the heat.

8.2.1. External Thermostat

An external (remote) thermostat connection can be used to sense temperature independent of the built-in thermostat. Connect thermostat to terminals 6 and 7 in the air door junction box.

8.2.2. Building Management System

A building management system or dry contact closure can be used to activate the Heat Mode for all Operating Modes. Connect applicable contacts to terminals 6 and 7 in the air door junction box.

8.3. Master/Slave Operation

For Master/Slave Operation a serial cable connection must be made between all Intelliswitch™ controls of each air door to be linked.
Once air doors are linked all Menu settings made through any air door display or remote control will transfer to all other linked air doors.
Parameter changes made on any linked air door will update all other boards "live" upon menu selections.

9. Infra-red Remote Control

The handheld infra-red remote control buttons, layout and operation are the same as that on the Intelliswitch™ air door display (including multiple button presses) with one exception, the Lock Button.

There is no need for multi-button press and hold for lock/unlock activation. The Lock Button will lock/unlock display in one press.

TROUBLESHOOTING

SYMPTOMS	CAUSE	REMEDY
NO AIR	• Power supply line open (no power)	• Check power source, check method of control in ON position
	• Fuse blown/circuit breaker tripped	• Replace fuse(s)/reset breaker
	• Motor overload tripped	• Internally protected motor - should reset automatically after cool-down, if not, replace motor.
	• Failed switch	• Replace switch
	MOTOR RUNNING/FANS ARE NOT ROTATING	
	• Broken or damaged flexible hub	• Replace fan sleeve/reengage coupling
	• Shaft rotating inside fan	• Tighten set screws/tighten fan on shaft
	ELECTRICAL CONTROLS NOT FUNCTIONING WHEN DOOR IS OPEN	
	• Selector switch is in off position	• Turn switch to “ON” position
	• Door limit switch not operating	• Repair or replace limit switch
MINIMUM AIR	• Air directional discharge vanes mis-adjusted	• Adjust vanes to proper position, see instructions
	• Inadequate intake clearance	• Move air curtain or remove obstruction
		• Provide adequate space for air curtain
	• Blower motor operates below speed	• Improper voltage
	• Fan rubbing against housing	• Free fan from housing
	• Fan wheels clogged with dirt	• Clean and vacuum fan wheels
	• Fan in backwards	• Check fans for blade curve toward discharge
NO SPEED ADJUSTMENT	• Speed sensor not detecting trigger rotation	• Adjust gap between sensor & trigger/ replace sensor
AIR IS NOT HITTING FLOOR	• Air stream too weak	• Adjust nozzle to proper position, adjust motor speed; see installation instructions
	• Air steam hits obstruction	• Remove obstruction or reposition air curtain (move out 3/8” for every 1” up from the door)
	• Negative pressure	• Relieve negative pressure by providing makeup air
UNEVEN AIR	• Shaft rotating inside fan	• Tighten set screws
	• One motor not operating	• Repair or replace motor
EXCESSIVE AIR MOVEMENT AT DOOR-WAY	• Nozzle not angled out far enough	• Adjust nozzle angle to outside
	• Unit too powerful	• Adjust motor speed
	• Air movement too cold	• Add auxiliary heat to overcome wind chill factor
	• Pushing air outside building	• Adjust discharge angle back into building, adjust motor speed
	SEE **AIR IS NOT HITTING FLOOR** SYMPTOMS	
ELECTRICALLY HEATED MODELS		
NO HEAT	• Switch turned to “ON” position	• Replace switch or check wiring
	• Thermostat not set properly	• Change thermostat setting
	• Coils burned out due to lack of air	• Correct airflow problem; replace coils
	• Automatic reset thermal cutout failed in open position	• Replace automatic thermal cutout
	• Manual reset thermal cutout tripped (if supplied)	• Reset manual thermal cutout
	• Speed sensor not detecting trigger rotation	• Adjust gap between sensor and trigger
	• Without speed adjustment, failed speed sensor	• Replace speed sensor
MINIMAL HEAT	• Thermostat in wrong location - thermostat too close to discharge	• Move thermostat away from air stream
	• Improper voltage	• Supply proper voltage
	• Thermostat not set properly	• Change temperature setting
	• Speed sensor not detecting trigger rotation	• Adjust gap between sensor & trigger/replace sensor
EXCESSIVE HEAT	• Incorrect speed range	• Set dip switch to electric heated speed range
	• Thermostat in wrong location	• Move the thermostat closer to air stream
	• Thermostat not set properly	• Change temperature setting
	• Insufficient air over coil	• Remove restriction on intake
	• Improper voltage	• Supply proper voltage
STEAM/HOT WATER HEATED UNITS		
EXCESSIVE HEAT	• Too high steam/hot water pressure	• Reduce steam pressure/hot water flow
	• Inadequate air flow, fins plugged up, dirty coils	• Clean intake and coils
MINIMAL HEAT	• Insufficient removal of condensation (steam)	• Increase trap size
	• Not enough steam pressure/water temperature too low	• Raise pressure for steam/increase water flow
	• Intake air below design temperature	• Increase steam pressure/increase water flow

WARRANTY

Berner International warrants all new equipment to be free of defects in workmanship and material for a period of five years (5 years) on unheated models and two years (2 years) on heated models from the original date of shipment, provided the equipment has been properly cared for, installed and operated in accordance with the limits specified on the nameplate and The Company's instructions.

The Company will correct by repair or replacement, at its option and expense, any proven defects in said apparatus, subject to the above conditions, provided that immediate written notice of such defects is given to The Company. The warranty does not include any labor incurred for the removal or installation of defective part(s). The Company reserves the right to inspect, or have inspected by a qualified representative, any apparatus at the place of installation before authorizing repair or replacement. Repair or replacement will be made F.O.B. factory with any applicable transportation charges to be borne by the customer. Merchandise not of The Company's manufacture supplied in piece, or in component assemblies, is not covered by the above warranty, but The Company will give the customer the benefit of any adjustment as made with the Manufacturer.

This warranty is void if the apparatus has been tampered with in any way or shows evidence of misuse.

The Company will not assume any expense or liability for repairs made outside its factory without proper written consent from its service manager, nor for any transportation charges on apparatus returned to the factory without written authorization by The Company.

Nothing in the above warranty provisions, however, shall impose any liability or obligation of any type, nature or description upon Berner International if Berner has not received payment in full for the apparatus in question.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HERE OF INCLUDING THE IMPLIED WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

LIMITATION OF DAMAGES

Notwithstanding anything to the contrary above, customer's exclusive remedy for any and all losses or damages resulting from the sale of The Company's equipment under this agreement, including but not limited to, any allegations of breach of warranty, breach of contract, negligence or strict liability, shall be limited, at The Company's option, to either the return of the purchase price or the replacement of the particular equipment for which a claim is made and proved. In no event shall The Company be liable for any special, consequential, incidental or indirect losses or damages from the sale of The Company's equipment under this agreement.

WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

A. Use this unit only in the manner intended by the manufacturer. If you have any questions, contact the manufacturer.
B. Before servicing or cleaning unit, switch power off at service panel and lock the service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.
C. Installation work and electrical wiring must be done by qualified person(s) in accordance with all applicable codes and standards, including fire-rated construction.
D. Sufficient air is needed for proper combustion and exhausting of gases through the flue (chimney) of fuel burning equipment to prevent back drafting. Follow the heating equipment manufacturer's guideline and safety standards such as those published by the National Fire Protection Association (NFPA), and the American Society for Heating, Refrigeration and Air Conditioning Engineers (ASHRAE), and local code authorities.
E. When cutting or drilling into wall or ceiling, do not damage electrical wiring and other hidden utilities.

I. UNCRATING

Carefully examine the carton(s) for damage before opening. If the carton is damaged, immediately notify the shipping company. Open the carton and remove all protective packing. Remove the unit by lifting vertically. Place the unit upside down on end supports to avoid damage to the electrical junction box. If the unit will be wall mounted, remove and save the two (2) locking screws from the back corners and detach the wall mounting plate. **See Figure 1**

ACCESSORIES: If the unit(s) were ordered with optional electrical accessories (door switch, control panel, etc.), the accessories may be found in the carton containing the unit or in a separate carton(s) accompanying the unit(s). Check all of the cartons/skids for accessories before discarding.

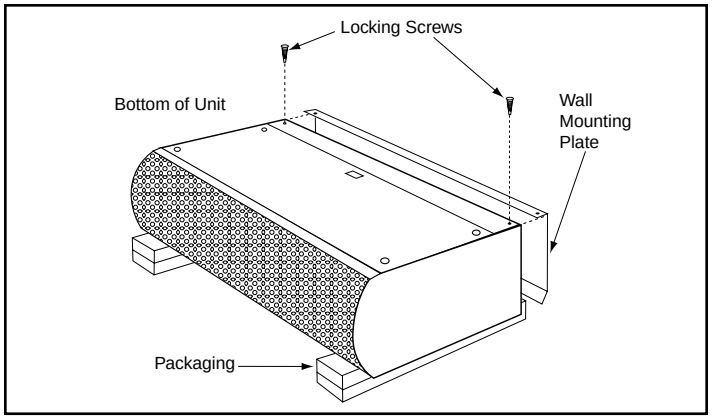

Figure 1

The MARK/DIPLOMAT air door is designed to be an effective barrier against cold drafts in the winter and hot air in the summer, flying insects and airborne contaminants. To achieve optimum protection, the unit should be mounted on the inside of the building, flush to the wall and as close to the top of the door opening as possible. To ensure peak performance keep air stream free of obstructions. **See Figure 2.**

II. WALL MOUNTING - INDOOR INSTALLATION

Unit should be mounted no higher than 10' above the floor. For maximum efficiency, the unit should be mounted no higher than 8'.

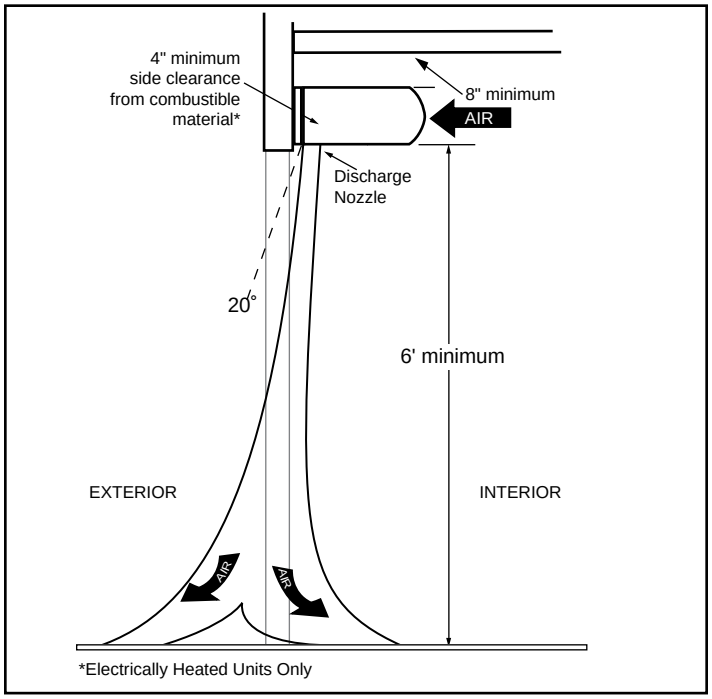

Figure 2

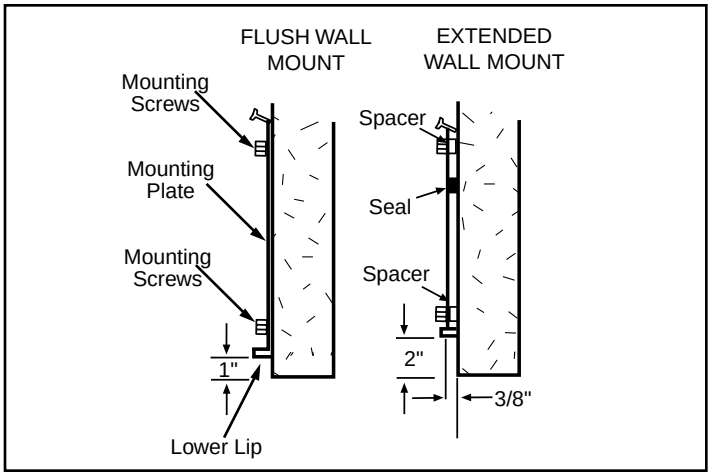

Figure 3

1. Install the MARK/DIPLOMAT air door so that nothing interferes with the curtain of air when it is deflected 20° to either side. If the air stream strikes any obstruction, i.e. the top edge of the doorway, a structural beam, a door opening device, etc., its efficiency will be greatly reduced. **See Figure 2.**
2. The lower lip of the mounting plate should be no more than 1" above the door opening when the unit is mounted flush to the wall. If the air door must be mounted higher, it must be spaced out from the wall 3/8" for every inch the unit is above the door opening. For the best performance, any void between the air door and the wall must be sealed (use foam, plastics or a similar packing). **See Figure 3.**
3. Do not block the air flow to or from the unit since this could cause overheating. **On electrically heated units there should be:**
   A) A minimum clearance of at least 4" between the side of the unit and any combustible material if the unit is enclosed in the ceiling or a decorative cover.
   B) A minimum clearance of 8" between the top of the unit and the ceiling in order to service the junction box(es).
   C) Do not install less than six feet (or 1.8 meters) from the floor to the unit. **See Figure 2.**

III. WALL PREPARATION

1. Position and center the mounting plate over the door opening. The mounting plate must be positioned with the 45° lip and the rubber vibration gasket on top. Drill mounting holes on the mounting plate. **See Figure 4.**
2. Mark the wall in the center of each mounting plate hole.

WEIGHT IN POUNDS			
Model	**Unheated**	**Electric**	**Hot Water/Steam**
DP2/MK21036	100	110	120
DP2/MK21042	118	125	140
DP2/MK21048	125	132	155
DP2/MK22048	138	140	197
DP2/MK22060	160	179	210
DP2/MK22072	174	219	222
DP2/MK22084	195	254	227
DP2/MK22096	210	275	235
DP2/MK23096	216	284	240
DP2/MK23108	237	305	248
DP2/MK23120	268	324	270

TABLE 1 - Weight Chart

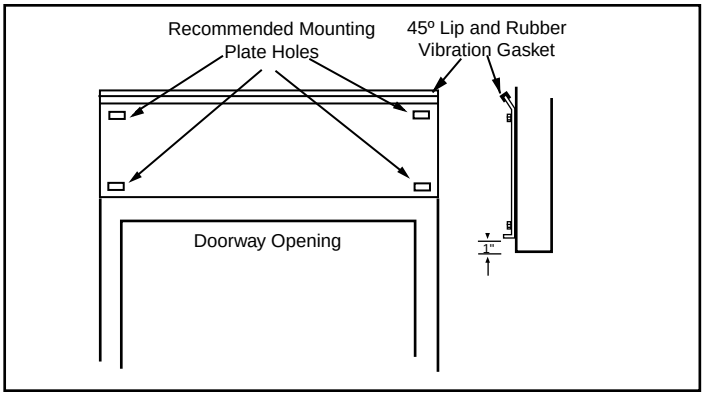

Figure 4

The wall must provide sufficient support for the air door. The mounting hardware (supplied by others) must be capable of supporting a minimum of three times the net weight of the air door. **See Weight Chart, Table 1.** If the location of the marks on the wall do not provide suitable support, mark and drill additional holes.

3. Drill the four holes as marked on the wall and attach the mounting plate with anchors (if used) and the four mounting screws (provided by others).

IV. ATTACHING THE AIR DOOR TO THE MOUNTING PLATE

1. Raise the unit over the door (air discharge nozzle facing down) and on to the mounting plate. First, tilt the unit upward matching the top recessed edge of the unit to the top 45° angled lip on the mounting plate. **See Figure 5.**
2. Lower the unit into place, allowing it to rest on the lower lip of the mounting plate.
3. After the unit is securely attached to the mounting plate, reinstall the two (2) locking screws at the bottom corners. **See Figure 5.**

V. TOP MOUNTING - INDOOR INSTALLATION (CEILING SUSPENSION)

For top mounting suspension rods, four (4) factory installed 5/16" threaded inserts are located on the top of the unit. **See Figure 6.**

1. Install the MARK/DIPLOMAT air door so that nothing interferes with the curtain of air when it is deflected 20° to either side. If the air stream strikes any obstruction, i.e. the top edge of the doorway, a structural beam, a door opening device, etc., its efficiency will be greatly reduced. **See Figure 2.**
2. Follow instructions 2 and 3 under INDOOR INSTALLATION: WALL MOUNTING (on page 1) checking to assure the minimum clearances are met.
3. Attach 5/16" threaded rods, or other suitable hardware to the top mounted threaded inserts.

VI. ELECTRICAL CONNECTIONS

All electrical wiring and connections **MUST** be performed by qualified personnel in accordance with the latest edition of the National Electrical Code ANSI/NFPA No. 70 or, in Canada, the Canadian Electrical Code, Part 1-C.S.A. Standard C22.1 and local codes and regulations. **MAKE SURE THE CORRECT VOLTAGE AS MARKED ON THE UNIT IS USED.**

The MARK/DIPLOMAT air door is internally wired to the junction box(es) on top of the of the unit.

1. Run the proper size cable from the source to the junction box and connect the leads.
2. Wiring diagrams are located inside the junction box. For amp rating, **See Tables 2 or 3** and the name plate on the unit.

VII. ELECTRICALLY HEATED MODELS

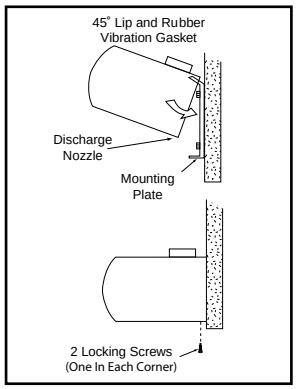

Figure 5

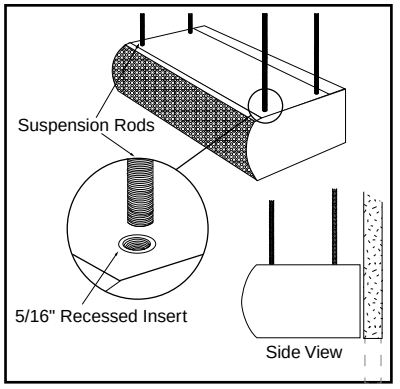

Figure 6

The heater circuit may be controlled by a remote thermostat, a built-in thermostat or a manual on/off heater switch located on the discharge side of the unit. **See Figure 7.**

1. If a thermostat is used, connect the proper leads located in the junction box to the leads of the thermostat. (See wiring diagram located in the junction box)
2. If a manual heat on/off switch is used, factory wiring is supplied from the heating coil to the unit mounted heat on/off switch.

Overheat protection is provided by thermal cutouts built into the heater coil assembly. (See the wiring diagram located in the junction box.)

VIII. STEAM OR HOT WATER HEATED MODELS

Piping should be done in accordance with local codes, regulations and standard practice.

1. Connect the supply & return to the 1" MPT nipples on the heating coil. **See Figure 8.**
2. Temperature controls to be supplied by others.

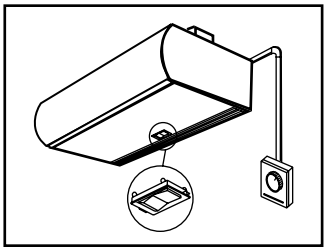

Figure 7

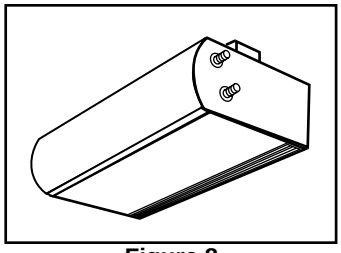

Figure 8

*Special 1/3 hp Two Speed Motor				

Table 2

IX. ADJUSTMENTS AIR FLOW ADJUSTMENTS

1. With the air door operating and the door in its full open position, check to see that nothing is obstructing the air flow at the discharge nozzle.
2. Find the air stream split location. Hold a handkerchief, by its corners, approximately 12" above the floor. Gently move the handkerchief back and forth in the doorway. Make sure the air is being directed to both the inside and the outside. **See Figure 9**. The split location is indicated where the handkerchief is vertical with minimal or no fluttering.
3. The split location should be approximately 3" outside the doorway and 12" above the floor.

If the split location does not conform to the above specifications, the air directional vanes in the outlet nozzle should be adjusted.

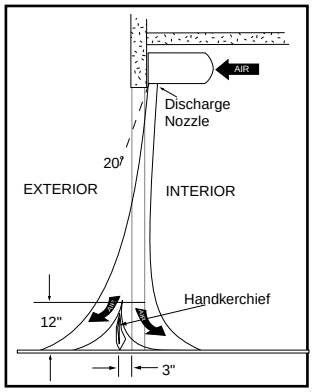

Figure 9

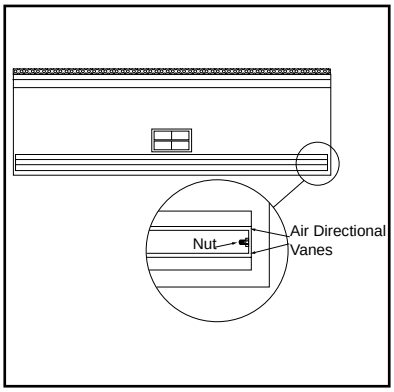

Figure 10

X. AIR DIRECTIONAL VANES

1. Loosen the two (2) nuts on each end of the outlet nozzle. Adjust the air directional vanes so the air flow split is in the proper location. **See Figure 10.**
2. Retighten the two screws after air directional adjustment is complete.

XI. MAINTENANCE AND CLEANING

CAUTION: ELECTRIC SHOCK HAZARD Disconnect power whenever servicing unit. More than one disconnect may be required to de-energize unit.

Keep your air door operating at peak efficiency by cleaning the blower wheels, motor(s) and intake grille. Buildup of dust on the blower wheels can cause vibration, noise and excessive wear on the motor bearings. The frequency of cleaning will depend on the environment where the unit is operating.

Dirty, dusty or greasy environments could require a cleaning schedule of once every two months. If the environment is not that dirty, the unit(s) should be scheduled for cleaning a minimum of once every (6) months. To access the interior of the unit:

1. **Disconnect the power to the unit.**
2. Remove the intake grille by removing the locking screw on each end of the unit. Lift the intake grille up and then towards you. **See Figure 11.**
3. Remove the bottom access panel. Remove Phillips head screws on the bottom of the unit. Vacuum and scrape (if necessary) to remove the build-up of dirt and debris. The motor(s) are permanently lubricated and require no additional lubrication. Re-install the cover and intake grille.
4. Switch the power on after cleaning. **CAUTION: STAND CLEAR OF THE UNIT OR WEAR SAFETY GOGGLES AS LOOSE DEBRIS MAY BE PRESENT AND MAY EXIT THE NOZZLE.**

XII. SERVICE

CAUTION: ELECTRIC SHOCK HAZARD Disconnect power whenever servicing unit. More than one disconnect may be required to de-energize unit.

*Any service performed on the MARK/DIPLOMAT Series air door **MUST** be done by qualified personnel.*

Berner air doors require very little servicing. All parts are easily accessible for periodic inspection and maintenance. Units should be cleaned at least twice a year. Your particular application (the amount of dirt and dust in the air) and location of the unit(s) will determine how often your unit(s) will need to be cleaned and serviced. All motors have permanently lubricated, sealed, sleeve bearings and require no maintenance.

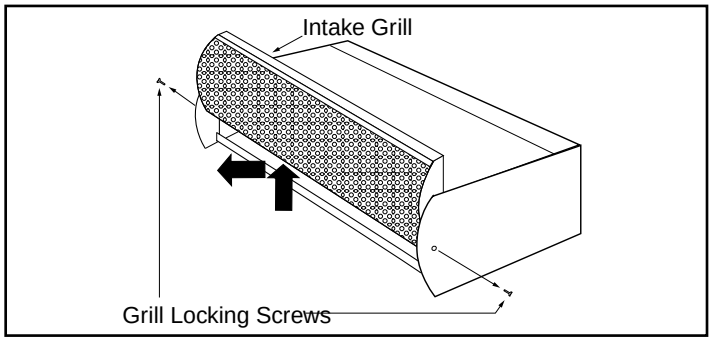

Figure 11

Table 3

TROUBLESHOOTING

SYMPTOMS	CAUSE	REMEDY
NO AIR	• Power supply line open (no power)	• Check power source, check method of control in ON position
	• Fuse blown/circuit breaker tripped	• Replace fuse(s)/reset breaker
	• Motor overload tripped	• Internally protected motor - should reset automatically after cool-down, if not, replace motor.
	• Failed switch	• Replace switch
	MOTOR RUNNING/FANS ARE NOT ROTATING	
	• Broken or damaged flexible hub • Shaft rotating inside fan	• Replace fan sleeve/reengage coupling • Tighten set screws/tighten fan on shaft
	ELECTRICAL CONTROLS NOT FUNCTIONING WHEN DOOR IS OPEN	
	• Selector switch is in off position • Door limit switch not operating	• Turn switch to "ON" position • Repair or replace limit switch
MINIMUM AIR	• Air directional discharge vanes mis-adjusted	• Adjust vanes to proper position, see instructions
	• Inadequate intake clearance	• Move air curtain or remove obstruction
		• Provide adequate space for air curtain
	• Blower motor operates below speed	• Improper voltage
	• Fan rubbing against housing	• Free fan from housing
	• Fan wheels clogged with dirt	• Clean and vacuum fan wheels
	• Fan in backwards	• Check fans for blade curve toward discharge
NO SPEED ADJUSTMENT	• Speed sensor not detecting trigger rotation	• Adjust gap between sensor & trigger/ replace sensor
AIR IS NOT HITTING FLOOR	• Air stream too weak	• Adjust nozzle to proper position, adjust motor speed; see installation instructions
	• Air steam hits obstruction	• Remove obstruction or reposition air curtain (move out 3/8" for every 1" up from the door)
	• Negative pressure	• Relieve negative pressure by providing makeup air
UNEVEN AIR	• Shaft rotating inside fan	• Tighten set screws
	• One motor not operating	• Repair or replace motor
EXCESSIVE AIR MOVEMENT AT DOOR-WAY	• Nozzle not angled out far enough	• Adjust nozzle angle to outside
	• Unit too powerful	• Adjust motor speed
	• Air movement too cold	• Add auxiliary heat to overcome wind chill factor
	• Pushing air outside building	• Adjust discharge angle back into building, adjust motor speed
	SEE **AIR IS NOT HITTING FLOOR** SYMPTOMS	
	ELECTRICALLY HEATED MODELS	
NO HEAT	• Switch turned to "ON" position	• Replace switch or check wiring
	• Thermostat not set properly	• Change thermostat setting
	• Coils burned out due to lack of air	• Correct airflow problem; replace coils
	• Automatic reset thermal cutout failed in open position	• Replace automatic thermal cutout
	• Manual reset thermal cutout tripped (if supplied)	• Reset manual thermal cutout
	• Speed sensor not detecting trigger rotation	• Adjust gap between sensor and trigger
	• Without speed adjustment, failed speed sensor	• Replace speed sensor
MINIMAL HEAT	• Thermostat in wrong location - thermostat too close to discharge	• Move thermostat away from air stream
	• Improper voltage	• Supply proper voltage
	• Thermostat not set properly	• Change temperature setting
	• Speed sensor not detecting trigger rotation	• Adjust gap between sensor & trigger/replace sensor
EXCESSIVE HEAT	• Incorrect speed range	• Set dip switch to electric heated speed range
	• Thermostat in wrong location	• Move the thermostat closer to air stream
	• Thermostat not set properly	• Change temperature setting
	• Insufficient air over coil	• Remove restriction on intake
	• Improper voltage	• Supply proper voltage
	STEAM/HOT WATER HEATED UNITS	
EXCESSIVE HEAT	• Too high steam/hot water pressure	• Reduce steam pressure/hot water flow
	• Inadequate air flow, fins plugged up, dirty coils	• Clean intake and coils
MINIMAL HEAT	• Insufficient removal of condensation (steam)	• Increase trap size
	• Not enough steam pressure/water temperature too low	• Raise pressure for steam/increase water flow
	• Intake air below design temperature	• Increase steam pressure/increase water flow

WARRANTY

Berner International warrants all new equipment to be free of defects in workmanship and material for a period of five years (5 years) on unheated models and two years (2 years) on heated models from the original date of shipment, provided the equipment has been properly cared for, installed and operated in accordance with the limits specified on the nameplate and The Company's instructions.

The Company will correct by repair or replacement, at its option and expense, any proven defects in said apparatus, subject to the above conditions, provided that immediate written notice of such defects is given to The Company. The warranty does not include any labor incurred for the removal or installation of defective part(s). The Company reserves the right to inspect, or have inspected by a qualified representative, any apparatus at the place of installation before authorizing repair or replacement. Repair or replacement will be made F.O.B. factory with any applicable transportation charges to be borne by the customer. Merchandise not of The Company's manufacture supplied in piece, or in component assemblies, is not covered by the above warranty, but The Company will give the customer the benefit of any adjustment as made with the Manufacturer.

This warranty is void if the apparatus has been tampered with in any way or shows evidence of misuse.

The Company will not assume any expense or liability for repairs made outside its factory without proper written consent from its service manager, nor for any transportation charges on apparatus returned to the factory without written authorization by The Company.

Nothing in the above warranty provisions, however, shall impose any liability or obligation of any type, nature or description upon Berner International if Berner has not received payment in full for the apparatus in question.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HERE OF INCLUDING THE IMPLIED WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

LIMITATION OF DAMAGES

Notwithstanding anything to the contrary above, customer's exclusive remedy for any and all losses or damages resulting from the sale of The Company's equipment under this agreement, including but not limited to, any allegations of breach of warranty, breach of contract, negligence or strict liability, shall be limited, at The Company's option, to either the return of the purchase price or the replacement of the particular equipment for which a claim is made and proved. In no event shall The Company be liable for any special, consequential, incidental or indirect losses or damages from the sale of The Company's equipment under this agreement.

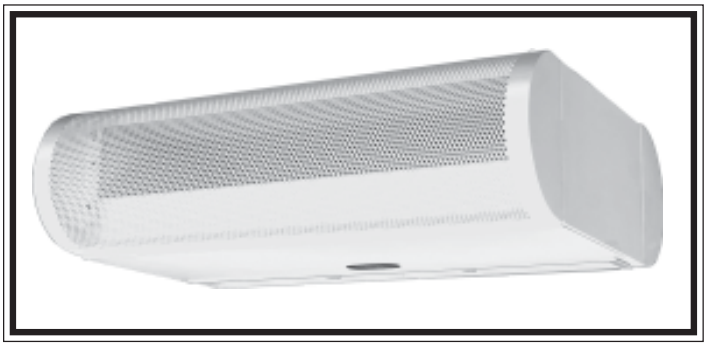
AURA

Installation & Maintenance Instructions



WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

A. Use this unit only in the manner intended by the manufacturer. If you have any questions, contact the manufacturer.
B. Before servicing or cleaning unit, switch power off at service panel and lock the service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.
C. Installation work and electrical wiring must be done by qualified person(s) in accordance with all applicable codes and standards, including fire-rated construction.
D. Sufficient air is needed for proper combustion and exhausting of gases through the flue (chimney) of fuel burning equipment to prevent back drafting. Follow the heating equipment manufacturer's guideline and safety standards such as those published by the National Fire Protection Association (NFPA), and the American Society for Heating, Refrigeration and Air Conditioning Engineers (ASHRAE), and local code authorities.
E. When cutting or drilling into wall or ceiling, do not damage electrical wiring and other hidden utilities.

WARNING FOR FUEL BURNING EQUIPMENT:
Sufficient air is needed for proper combustion and exhausting of gases through the flue (chimney) of fuel burning equipment to prevent back drafting. Follow the heating equipment manufacturer's guideline and safety standards such as those published by the National Fire Protection Association (NFPA), and American Society for Heating, Refrigeration and Air Conditioning Engineers (ASHRAE), and local code authorities.

UNCRATING

This unit was quality inspected and tested immediately prior to packaging and was in operating condition at that time. Check the shipping carton and unit for any damage that may have occurred during shipment. If damage is found, notify the shipping company immediately.

The AURA Series air door is shipped completely assembled. Remove the accessory box and the louvered discharge grille (wrapped in protective paper) from the carton. Remove the AURA Series air door from the carton. **See Figure 1.** Immediately upon unpacking the unit, verify that the rating nameplate agrees with the electric supply available.
Do NOT attach the louvered discharge grille or perforated intake grille at this time.

BERNER INTERNATIONAL CORPORATION
New Castle, Pennsylvania
724-658-3551 • 1-800-245-4455 • www.berner.com • airdoors@berner.com

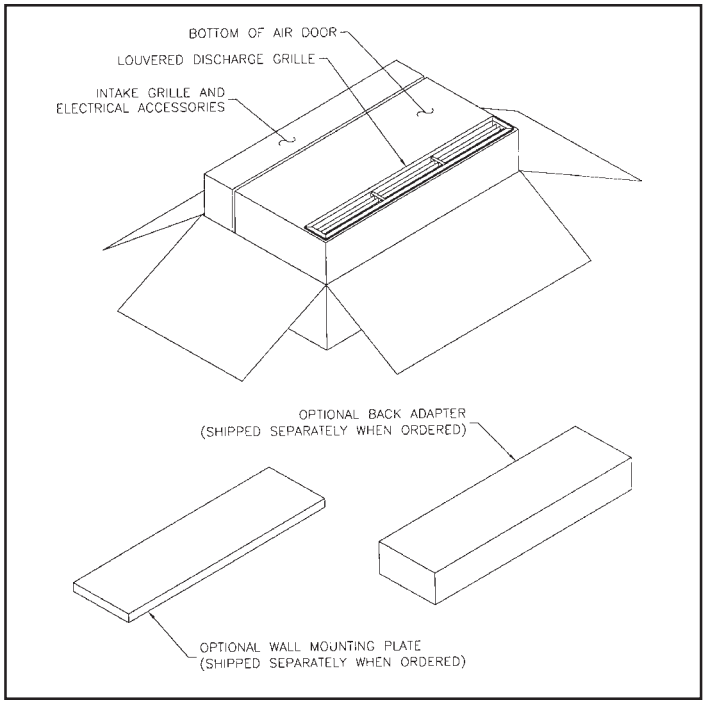


FIGURE 1 - Contents

Each AURA Series carton contains the following **pre-assembled components:**

- ✓ (1) AURA air door unit
- ✓ (1) Louvered discharge grille
- ✓ (1) Perforated intake grille
- ✓ (2) Plastic snap ring bushings
- ✓ (6) No. 6 x ¾ Phillips head screws
- ✓ (1) Remote selector switch

Optional Accessories

- ✓ Wall mounting plate
- ✓ Perforated back adapter
- ✓ Solid back adapter
- ✓ Solid back adapter (with or without lights)

I. MOUNTING INSTRUCTIONS

(All Models)

A. Before mounting the unit, check the supporting structure to verify that it has sufficient load-carrying capacity to support the weight of the unit(s). The mounting hardware (supplied by others) should be capable of supporting a minimum of three (3) times the weight of the unit. **See Table 1.**

B. Nothing should interfere with the curtain of air developed when the discharge grille vanes are directed 20° toward the door opening. If the air stream strikes any obstruction (the top edge of the doorway, a door opening device, etc.), the effectiveness of the unit will be greatly reduced.

MODEL	Net Weight Ambient (lbs)	Net Weight Heated (lbs)
ARA1036	120	130
ARA1042	135	145
ARA1048	158	168
ARA1060	185	195

TABLE 1 - Unit Weight

C .For optimum performance, the bottom of the unit (discharge grille) should be a maximum of 1" above the top of the door opening with the unit mounted flush to the wall. If the unit must be mounted higher, it must be **spaced out** from the wall 3/8" for every inch the unit is above the door opening (maximum recommended mounting height of 8'). Where possible (installation site permitting), for optimum protection, any void between the air door and the wall should be sealed along the full length of the unit.

D. Do not block (obstruct) the air intake grille. Insufficient air flow can cause the unit to overheat.

E. **Electric heated units should have:**

1. A minimum clearance of at least 4" between the sides and top of the unit and any combustible material.
2. A minimum clearance of at least 6' between the bottom of the unit and the floor.

Proceed to either **Suspended or Wall Mounting Instructions.**

II. SUSPENDED MOUNTING

A. NO BACK ADAPTOR: Figure 2

1. Suspend the AURA Series air door on the inside of the building with the **louvered discharge grille** facing the door opening. **See Figure 2.**
2. Mount and level the air door by connecting four (4) 5/16-18 threaded rods or other suitable hardware (supplied by others) to the (4) 5/16-18 threaded inserts located on top of the unit.

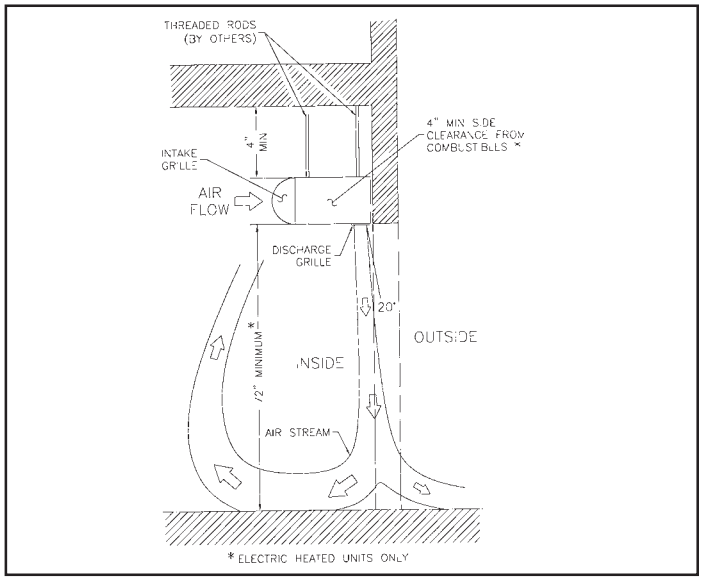

FIGURE 2 - Suspension Mount without Back Adapter

B. WITH BACK ADAPTER: Figures 3 & 4

1. The unit may be mounted with the louvered discharge grille facing toward the door opening, or the interior of the building (electric heated models only). **See Figures 3 and 4.**
2. **Figure 3** installation (louvered discharge grille facing interior of the building). Follow instructions A & B above.
3. **Figure 4** installation (louvered discharge grille facing interior of the building). A maximum of 6" between the wall and intake grille is required. Install the back adap tor at this time. Follow instructions 2 under Item A.

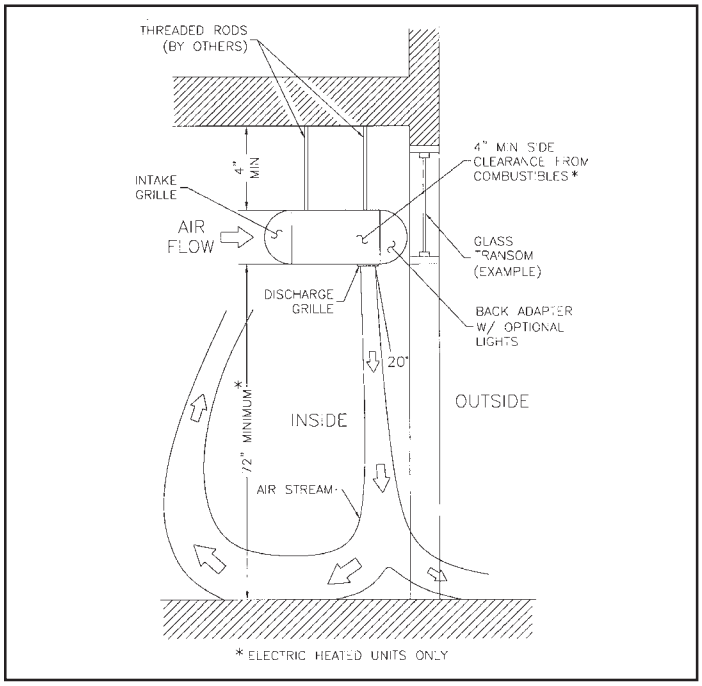

FIGURE 3 - Suspension Mount with Back Adapter

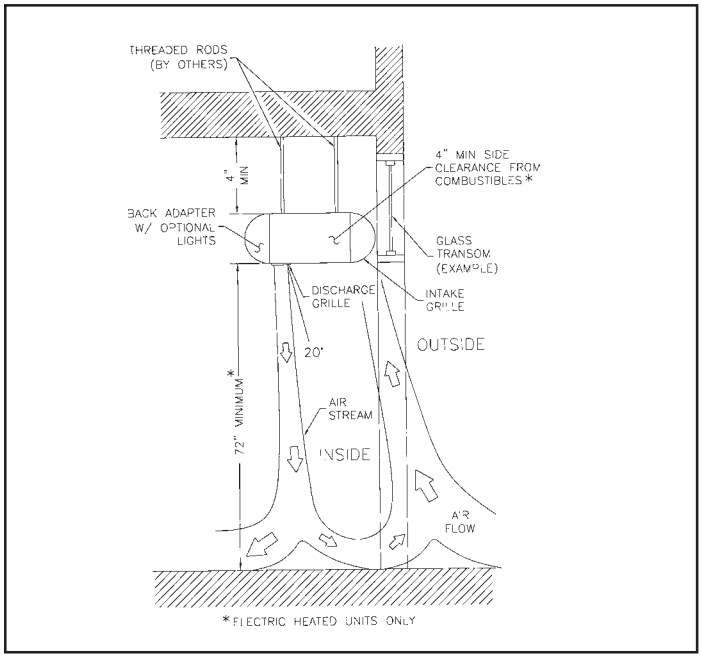

FIGURE 4 - Suspension With Back Adapter Reverse Flow

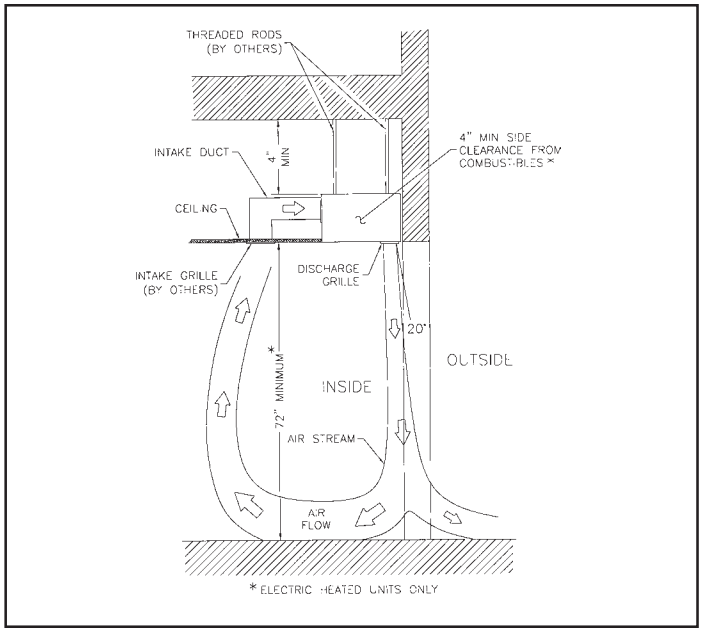

FIGURE 5 - In-Ceiling Suspension Mount Without Adapter

C. ABOVE CEILING: Figure 5

Follow instructions 1 & 2 under Item A. **See Figure 5.** The bottom of the unit can be exposed for easy servicing.

D. DO NOT install the perforated intake grille or the louvered air discharge grille at this time. Proceed to Section IV ELECTRICAL CONNECTIONS.

III. WALL MOUNTING

(Optional Wall Mounting Bracket Required)
See Figures 6-10

A. When the AURA Sseries air door is for wall mounting, four 5/16" shoulder bolts will be pre-assembled on the back of the unit (opposite the perforated intake grille).

B. The wall mounting plate is designed to fit flush with the back of the entire AURA door.

C. Determine the exact location of the air door unit. Position the center of the wall mounting plate over the center of the door opening with the larger opening of the key hole slots facing up.

For optimum performance, the bottom of the mounting plate should be no more than 1" above the top of the door opening.

STANDARD WALL MOUNTING: **Figure 7A.** The wall mounting plate thickness provides a natural $1\frac{3}{8}$" space which allows for mounting up to 4" above the opening.

HIGH WALL MOUNTING: If the wall mounting plate must be mounted higher than 4" above the door opening, it must be spaced out from the wall $\frac{3}{8}$" for every inch the unit is above the door opening. **See Figure 7B.**

For optimum performance, do not exceed the recommended **maximum mounting height of 8'** above the finished floor. For optimum protection, any void between the mounting plate and the wall should be sealed along the full length of the mounting plate.

D. Mark the wall in the centers of the (4) ½" round holes provided on the mounting plate. **See Figure 6.** If the holes on the mounting plate are not located where suitable support is available for the unit, drill new holes in the space provided on the mounting plate.

E. Drill the four holes as marked on the wall and attach the mounting plate to the wall (mounting hardware by others).

F. Raise the air door with the discharge opening facing down toward the floor. While holding the unit level, slide the heads of the shoulder bolts into the larger hole of the key-hole slots of the mounting plate. Lower the unit into place, keeping both ends level, allowing it to rest flush with the mounting plate. **See Figure 9.**

G. After attaching the unit to the mounting plate, check to ensure the unit is seated and flush with the mounting plate on all four sides.

H. Do not install the perforated intake grille or the louvered discharge grille at this time.
Proceed to Section IV - Electrical Connections.

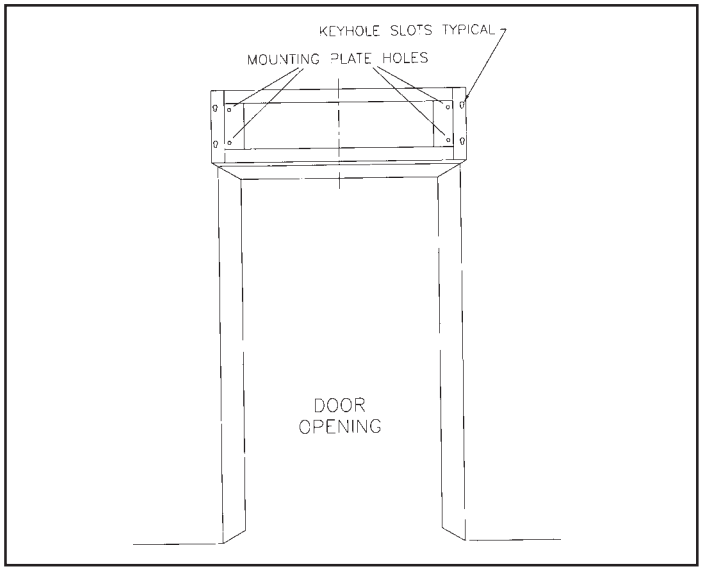

FIGURE 6 - Wall Mounting Plate, Wall Marking

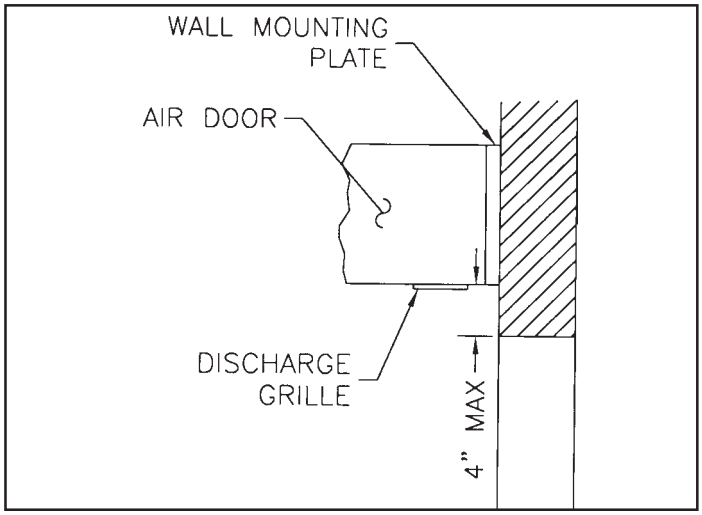

FIGURE 7A - Standard Wall Mounting

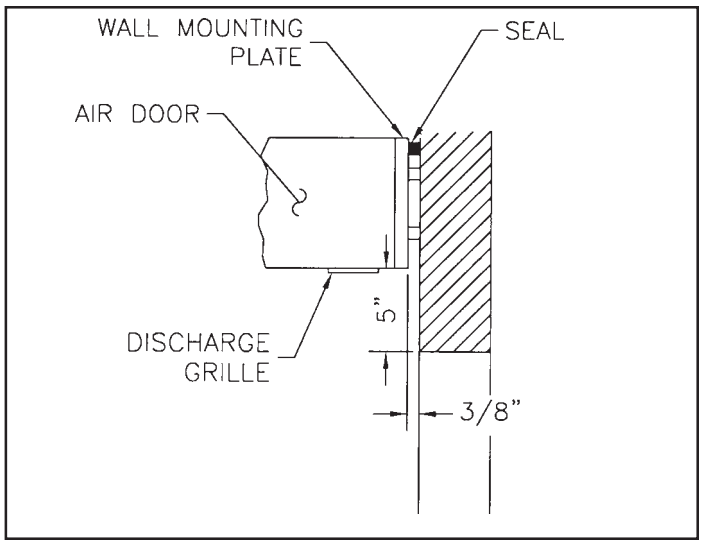

FIGURE 7B - High Wall Mounting

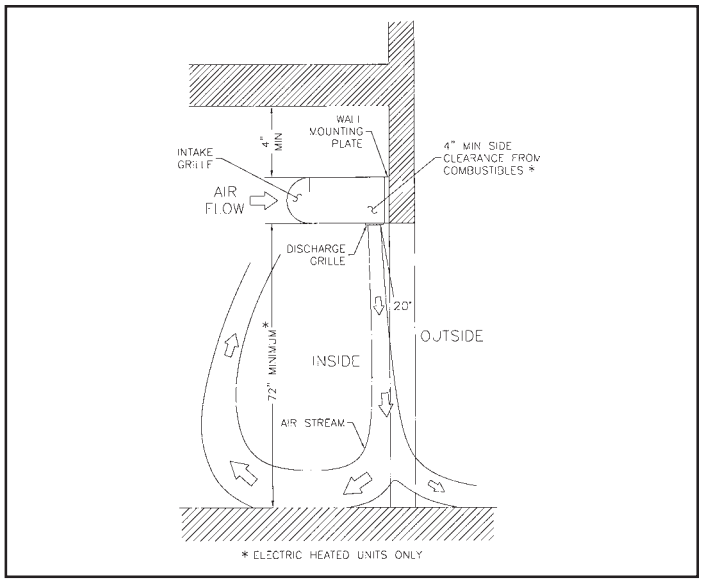

FIGURE 8 - Wall Mount With Optional Wall Plate

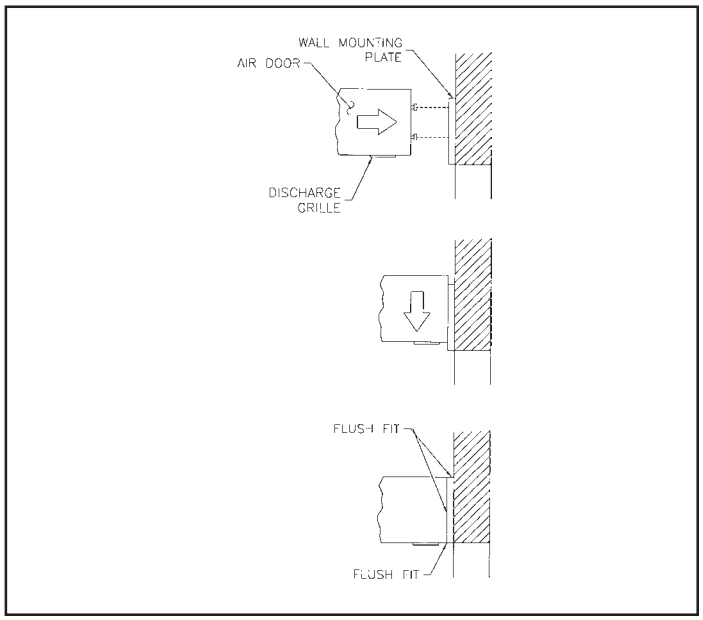

FIGURE 9 - Mounting to Wall Plate

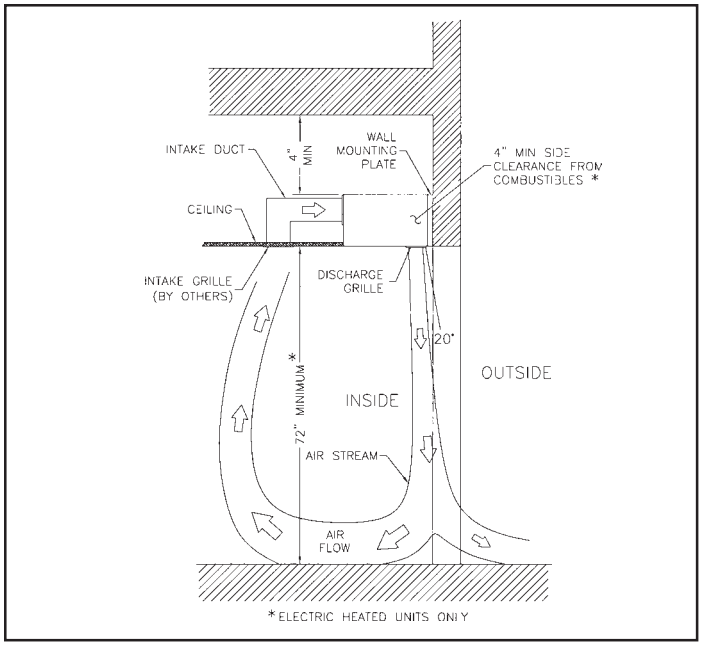

FIGURE 10 - In-Ceiling Mount With Optional Wall Plate

IV.ELECTRICAL CONNECTIONS

A. All electrical wiring and connections **MUST** be performed by qualified personnel in accordance with the National electrical Code ANSI/NFPA No. 70 (latest edition) or, in Canada, the Canadian Electrical Code, Part 1-C.S.A. Standard C22.1 and local codes and regulations.
WARNING: DO NOT OPERATE THIS FAN WITH ANY SOLID STATE SPEED CONTROL DEVICE.

B. Check the rating nameplate on the top of the unit, or inside the bottom access cover, for supply voltage and current requirements. **See Figure 11.** A separate line voltage supply with a suitable branch circuit protection device should be run directly from the main electrical panel of the unit. A disconnect switch for each branch circuit is a required part of this installation.

C. All field wiring must be copper with a minimum insulation of 60°C within approved conduit. If any of the wire supplied with the unit must be replaced, it must be replaced with copper wiring with a minimum insulation of 90°C.

D. Access the wiring compartment, **See Figure 11,** by lowering the bottom **hinged access cover.** Remove the two ¼" bolts located on the intake side of the unit and the access cover will swing down to rest in the vertical position exposing the wiring compartment. If desired, the access cover may be removed by grasping both sides of the access cover and pressing in on the spring loaded hinges. **See Figure 11.**

E. The top of the unit has two knockouts on each side allowing for a left hand or right hand power connection. Remove the required knockout and connect the power supply to the unit.

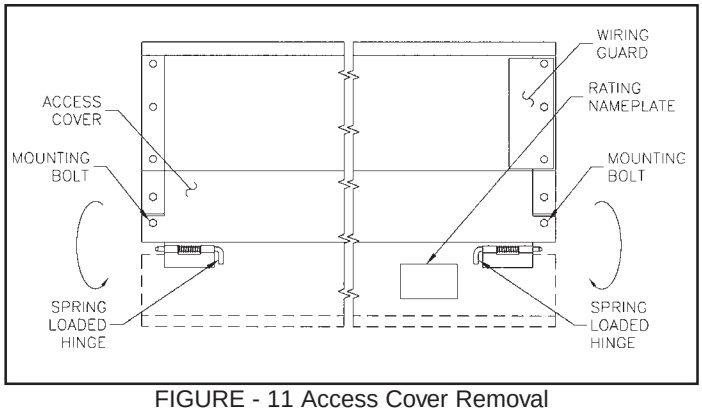

FIGURE - 11 Access Cover Removal

F. A wiring guard, **See Figure 12,** is mounted on the right of the air intake of the unit. The wiring guard is reversible, so it may be mounted on either side of the unit. Remove the ¼" mounting bolt. Clearance holes enable the wiring guard to be removed without disturbing the ¼" shoulder bolts.

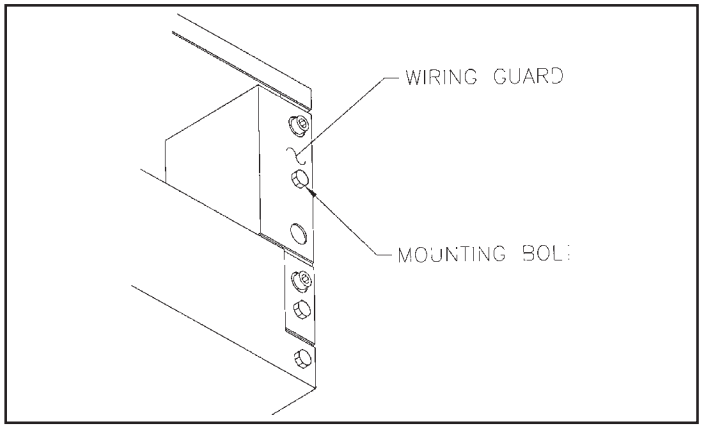

FIGURE 12 - Wiring Guard

G The wiring tray, directly below the power supply connection, also has two knockout slugs. Remove the required knockouts and insert one plastic snap ring bushing into each hole created.

H. Install the **Remote Selector Switch** in accordance with the directions furnished with the selector switch. Each switch is capable of operating up to three units at 120 VAC and up to six units at 208/240 VAC. Make the switch connections according to the applicable wiring diagram..

I. Connect all power and control circuit wires to the terminal strip located on the right hand side of the wiring tray. Refer to the wiring diagram.

J. If your unit was provided with a Time Delay-Off Relay, it will be factory set at 15 seconds. If a longer delay-off is desired, adjust the rotary dial clockwise with a small screwdriver to preferred time setting. Each hashmark stands for 60 seconds with a maximum setting of up to 300 seconds. **See Figure 13.**

K. Reinstall the wiring guard so that it covers all of the wires used to make the connections to the terminal strip. Reinstall the ¼" mounting bolt. **See Figure 12.**

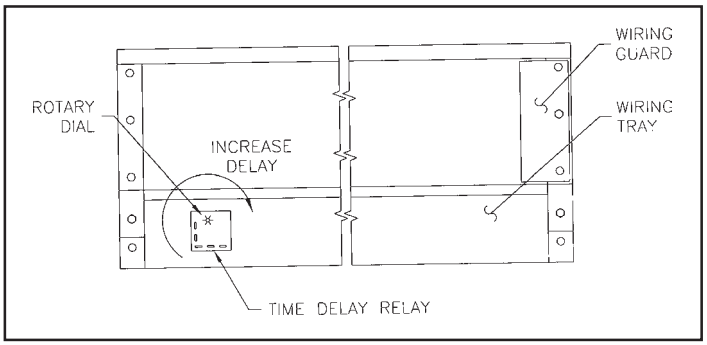

FIGURE 13 - Time Delay Adjustment

L. Reinstall the hinged access cover by positioning one hinge into the corresponding catch located on the unit. Raise the other hinge to the unit, when the catch is located press in the hinge and release it into the catch. Swing the access cover into place and align the mounting holes with the threaded inserts on the unit. Reinstall the two ¼" bolts. **See Figure 11.**

M. Attach the perforated intake grille on the ¼" shoulder bolts of the unit. **See Figure 15.** While holding the grille level with the unit, align the keyhole slots with the shoulder bolts. Press the grille firmly against the unit and push down until the grille rests flush with the bottom of the unit.

N. Attach the louvered discharge grille to the unit with the six (6) No. 6 x ¾" phillips head screws provided. **See Figure 14.**

O. Switch on the power at the service disconnect. Turn on the unit at the selector switch and check the sequence of operation against that provided on the wiring diagram. **Proceed to Section V: Operation and Air Flow Adjustment.**

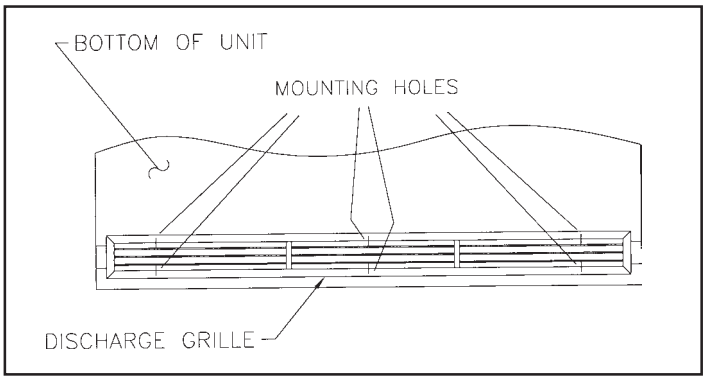

FIGURE 14 - Louvered Discharge Grille Installation

V. OPERATION AND AIR FLOW ADJUSTMENT

A. With the air curtain operating on high speed, and the door in its full open position, check to see that nothing is obstructing the air flow at the louvered discharge grille.

B. Find the air stream "split" location. Hold a handkerchief, by its top corners, approximately 12" above the floor. Gently move the handkerchief back and forth in the doorway. Make sure the air is being directed to both the inside and the outside. The split locations indicated when the handkerchief is vertical with minimal flutter.

C. Adjust the air directional vanes in the louvered discharge grille so the split location is approximately 3" outside the doorway.

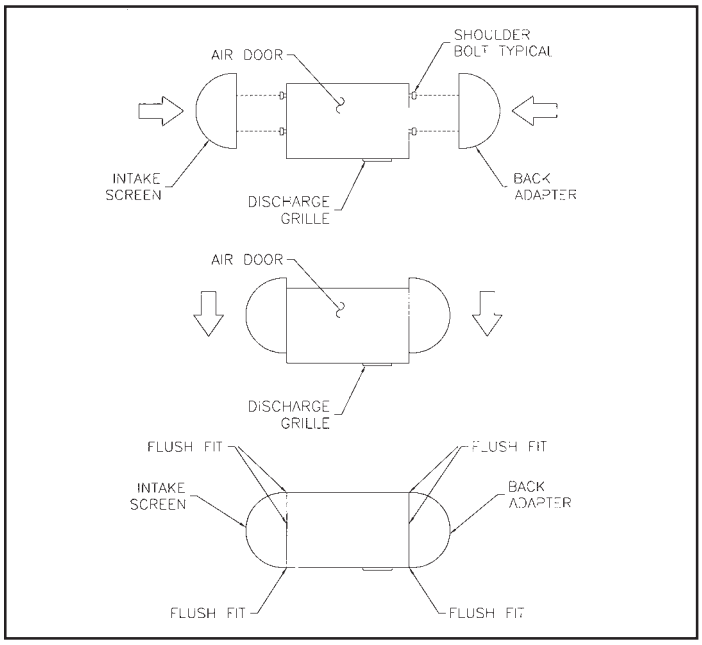

FIGURE 15 - Attaching Intake Screen or Back Adapter

VI. PREVENTIVE MAINTENANCE & SERVICE

A. CAUTION: ELECTRIC SHOCK HAZARD Disconnect power whenever servicing unit. More than one disconnectmay be required to de-energize unit.

Any service performed on the AURA Series air door **MUST** be done by qualified personnel.

Berner air doors require very little servicing. All parts are easily accessible for periodic inspection and maintenance. Units should be cleaned at least twice a year. Your particular application (the amount of dirt and dust in the air) and location of the unit(s) will determine how often your unit(s) will need to be cleaned and serviced. All motors have permanently lubricated, sealed, sleeve bearings and require no maintenance.

B. TO PERFORM PREVENTIVE MAINTENANCE, REMOVE THE LOUVERED DISCHARGE GRILLE, THE PERFORATED INTAKE GRILLE AND THE BOTTOM ACCESS COVER.

1. Remove the discharge grille by unscrewing the six (6) Phillips head screws located on the inside edge of the grille. **See Figure 14.**
2. Remove the intake grille by lifting up on both sides with equal force. Once the grille is detached, pull the grille away from the unit until it clears the shoulder bolts. This will expose the bottom access cover mounting bolts and the heating coils (if applicable).
3. Remove the bottom two ¼" mounting bolts on the intake side of the unit. Swing the access cover to rest in the vertical position. Grasp both sides of the access cover and press in on the spring loaded hinge. This will release the access cover from the unit and expose the blower mounting plate. **See Figure 11.**

4. Use an industrial vacuum or compressed air to remove dirt build-up from the inside of the access cover, air inlet grille, blower wheels/housings, interior of the unit, and heating coils (if applicable). Remove the dirt build-up from the blower wheels through the discharge openings on the blower plate.
5. If the unit is extremely dirty the blower plate (containing the motor and fan wheels) may be removed to further access the internals.

C. TO REMOVE THE BLOWER PLATE:

1. Unplug the wiring harness from the motor.
2. Blower plate removal - Remove the four (4) ¼" bolts located on the four corners of the blower mounting plate. This will release the blower plate from the unit. Remove the blower plate by lowering it straight down and out of the unit. All internals are attached to the blower plate allowing for service or repair to be done on the ground away from the unit.
3. To reassemble the unit reverse steps 1 through 5.

WARRANTY

Berner International warrants all new equipment to be free of defects in workmanship and material for a period of five years (5 years) on unheated models and two years (2 years) on heated models from the original date of shipment, provided the equipment has been properly cared for, installed and operated in accordance with the limits specified on the nameplate and The Company's instructions.

The Company will correct by repair or replacement, at its option and expense, any proven defects in said apparatus, subject to the above conditions, provided that immediate written notice of such defects is given to the Company. The warranty does not include any labor incurred for the removal or installation of defective part(s). The Company reserves the right to inspect, or have inspected by a qualified representative, any apparatus at the place of installation before authorizing repair or replacement. Repair or replacement will be made F.O.B. factory with any applicable transportation charges to be borne by the customer. Merchandise not of the Company's manufacture supplied in piece, or in component assemblies, is not covered by the above warranty, but the Company will give the customer the benefit of any adjustment as made with the Manufacturer.

This warranty is void if the apparatus has been tampered with in any way or shows evidence of misuse.

The Company will not assume any expense or liability for repairs made outside its factory without proper written consent from its service manager, nor for any transportation charges on apparatus returned to the factory without written authorization by the Company.

Nothing in the above warranty provisions, however, shall impose any liability or obligation of any type, nature or description upon Berner International if Berner has not received payment in full for the apparatus in question.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF INCLUDING THE IMPLIED WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

LIMITATION OF DAMAGES

Notwithstanding anything to the contrary above, customer's exclusive remedy for any and all losses or damages resulting from the sale of The Company's equipment under this agreement, including but not limited to, any allegations of breach of warranty, breach of contract, negligence or strict liability, shall be limited, at The Company's option, to either the return of the purchase price or the replacement of the particular equipment for which a claim is made and proved. In no event shall The Company be liable for any special, consequential, incidental or indirect losses or damages from the sale of The Company's equipment under this agreement.

Serial No. _____ Model No. _____ Date of Purchase _____

www.berner.com

TROUBLESHOOTING

SYMPTOMS	CAUSE	REMEDY
NO AIR	• Power supply line open (no power)	• Check power source, check method of control in ON position
	• Fuse blown/circuit breaker tripped	• Replace fuse(s)/reset breaker
	• Motor overload tripped	• Internally protected motor - should reset automatically after cool-down, if not replace motor.
	• Failed switch	• Replace switch
	MOTOR RUNNING/FANS ARE NOT ROTATING	
	• Broken or flexible hub	• Replace fan sleeve/reengage coupling
	• Shaft rotating inside fan	• Tighten set screws/tighten fan on shaft
	• Belt driven units/belt broken	• Replace belts
	ELECTRICAL CONTROLS NOT FUNCTIONING WHEN DOOR IS OPEN	
	• Selector switch is in off position	• Turn switch to "ON" position
	• Door limit switch not operating	• Repair or replace limit switch
MINIMUM AIR	• Air directional discharge vanes misadjusted	• Adjust vanes to proper position, see instructions
	• Inadequate intake clearance	• Move air curtain or remove obstruction
		• Provide adequate space for air curtain
	• Blower motor operates below speed	• Improve voltage
	• Fan rubbing against housing	• Free fan from housing
	• Fan wheels clogged with dirt	• Clean and vacuum fan wheels
AIR IS NOT HITTING FLOOR	• Air stream to weak	• Adjust nozzle to proper position, adjust motor speed; see installation instructions
	• Air stream hits obstruction	• Remove obstruction or reposition air curtain (move out $^{3}/_{8}$" for every 1" up from the door)
	• Negative pressure	• Relieve negative pressure by providing make-up air
UNEVEN AIR	• Shaft rotating inside fan	• Tighten set screws
	• One motor not operating	• Repair or replace motor
EXCESSIVE AIR MOVEMENT AT DOORWAY	• Nozzle not angled out far enough	• Adjust nozzle angle to outside
	• Unit too powerful	• Adjust motor speed
	• Air movement too cold	• Add auxiliary heat to overcome wind chill factor
	• Pushing air outside building	• Adjust discharge angle back into building, adjust motor speed
	SEE **AIR IS NOT HITTING FLOOR** SYMPTOMS	
	ELECTRICALLY HEATED MODELS	
NO HEAT	• Switch turned to "ON" position	• Replace switch or check wiring
	• Thermostat not set properly	• Change thermostat setting
	• Coils burned out due to lack of air	• Correct airflow problem; replace coils
	• Automatic reset thermal cutout failed in open position	• Replace automatic thermal cutout
	• Manual reset thermal cutout tripped	• Reset manual thermal cutout
NOT ENOUGH HEAT	• Thermostat in wrong location - thermostat too close to discharge	• Move thermostat away from air stream
	• Improper voltage	• Supply proper voltage
	• Thermostat not set properly	• Change temperature setting
TOO MUCH HEAT	• Thermostat in wrong location	• Move thermostat closer to air stream
	• Thermostat not set properly	• change temperature setting
	• Insufficient air over coil	• Remove restriction on intake
	• Improper voltage	• Supply proper voltage

NSF certification requires maximum mounting height of 7 feet for models ASN/STN 36" & 42"
EPH certification requires maximum mounting height of 7 feet for all ASN/STN models

WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

A. Use this unit only in the manner intended by the manufacturer. If you have any questions, contact the manufacturer.
B. Before servicing or cleaning unit, switch power off at service panel and lock the service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.
C. Installation work and electrical wiring must be done by qualified person(s) in accordance with all applicable codes and standards, including fire-rated construction.
D. Sufficient air is needed for proper combustion and exhausting of gases through the flue (chimney) of fuel burning equipment to prevent back drafting. Follow the heating equipment manufacturer's guideline and safety standards such as those published by the National Fire Protection Association (NFPA), and the American Society for Heating, Refrigeration and Air Conditioning Engineers (ASHRAE), and local code authorities.
E. When cutting or drilling into wall or ceiling, do not damage electrical wiring and other hidden utilities.

I. UNCRATING

Carefully examine the carton(s) for damage before opening. If the carton is damaged, immediately notify shipping company. If the unit(s) were shipped on wooden skids, remove protective wood and banding straps securing the carton(s) to the skid. Open the carton(s) and remove all protective packaging. Remove the plastic cover housing by lifting vertically. Remove and discard four (4) nuts and washers holding the motor/blower section to the bottom of the carton. Remove motor/blower section from the carton.

CAUTION: ONLY LIFT THE UNIT BY GRASPING INLET RINGS ON THE BLOWER HOUSING WITHOUT TOUCHING BLOWER WHEELS.

Immediately verify that the electrical rating nameplate located on the cover matches electrical power supply available. Retain the shipping carton(s) until the unit(s) are installed and properly operating.

ACCESSORIES: If the unit(s) were ordered with optional electrical accessories (door switch, control panel, etc.), the accessories may be found in the carton containing the unit or in a separate carton(s) accompanying the unit(s). Check all of the cartons/skids for accessories before discarding.

II. MOUNTING INSTRUCTIONS *(General)*

INDOOR MOUNTING - Environmental/Insect Dust Control

OUTDOOR MOUNTING (Unheated Only) - Insect/Dust Control

The Aristocrat/Star Air Door is designed to be an effective barrier against cold drafts in the winter and hot air in the summer. To achieve optimum protection, the unit should be mounted on the inside of the building, flush to the wall and as close to the top of the door opening as possible. To ensure peak performance keep air stream free of obstructions.

The Air Door will not perform properly if negative air pressure exists in the building. Under these conditions, a means for makeup air to the building must be provided so that the air pressure on both sides of the opening is in balance.

Before mounting the unit, check the supporting structure to verify that it has sufficient load-carrying capacity to support the weight of the unit(s). The mounting hardware (supplied by others) should be capable of supporting a minimum of three (3) times the weight of the unit. **See Table 1.**

Model	Net Weight Amient (lbs)	Net Weight Electric (lbs)
ASF/STF 1036	50	55
ASR/STR/ASN/STN 1036	52	57
ASF/STF 1042	52	57
ASR/STR/ASN/STN 1042	54	59
ASF/STF 1048	54	59
ASR/STR/ASN/STN 1048	56	61
ASF/STF 1060-2	56	61
ASF/STF 1060-3	60	65
ASR/STR/ASN/STN2060	70	75
ASR/STR 1060	58	63
ASF/STF 1072	70	75
ASF/STF 2072	80	85
ASR/STR/ASN/STN 2072	84	89

TABLE 1 - Unit Weight

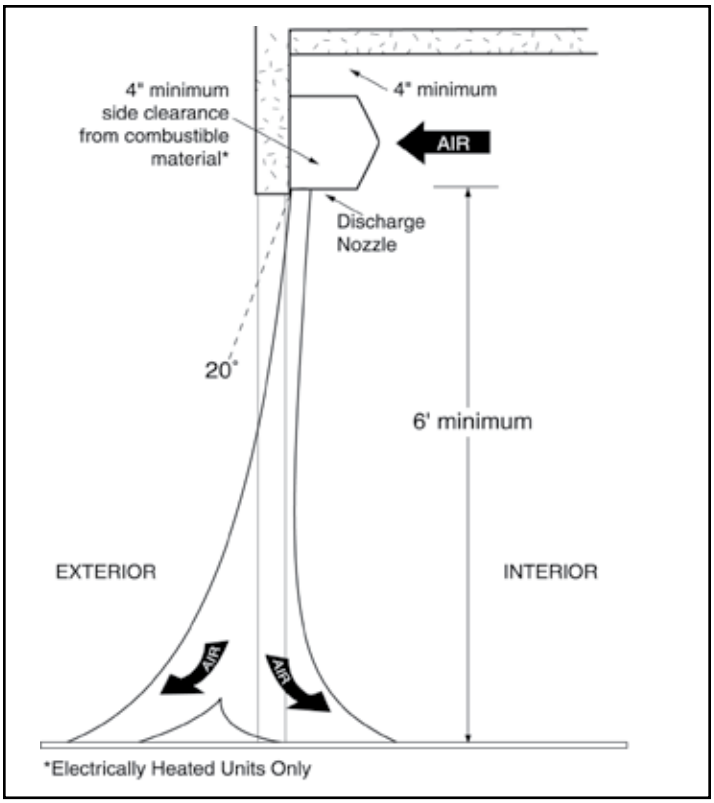

FIGURE 1 - Air Stream

NOTE: The Air Door is weatherproof, therefore no special covering is required for outdoor mounting.

IMPORTANT: A minimum of 4" is recommended above the top of the Air Door for the installation and removal of the cover housing.

A. When determining the mounting location for the unit(s), make sure that nothing interferes with the curtain of air developed when the discharge vanes are directed from 0° to 20° toward the door opening. If the air stream strikes any obstruction (the top edge of the doorway, a door opening device, etc.), the effectiveness of the unit will be greatly reduced. **See Figure 1.**

B. For optimum performance, the bottom of the unit (discharge nozzle) should be no more than 1" above the top of the door opening with the unit mounted flush to the wall. If the unit must be mounted higher, it must be **spaced out** from the wall **$^3/_8$" for every inch** the unit is above the door opening. For optimum protection, any void between the Air Door and the wall should be sealed along the full length of the unit.

See Figure 2.

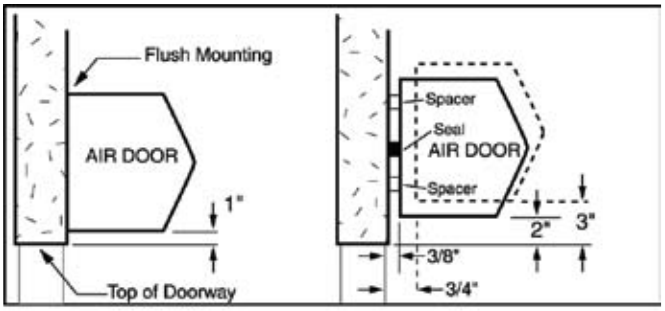

FIGURE 2

C. **Electric heated units shall:**
   1. Have a minimum clearance of at least 4" between the sides and top of the unit and any combustible material.
   2. Have a minimum clearance of at least 6' between the bottom of the unit and the floor.
   3. Be installed indoors only.

D. Proceed to either **Section III - WALL MOUNTING,** or **Section IV SUSPENDED MOUNTING**

III. WALL MOUNTING

To prevent damage to the Air Door during shipping, the unit is shipped with each blower attached to the back plate by two phillips head screws. These screws should be removed before installation.
See Figure 3.

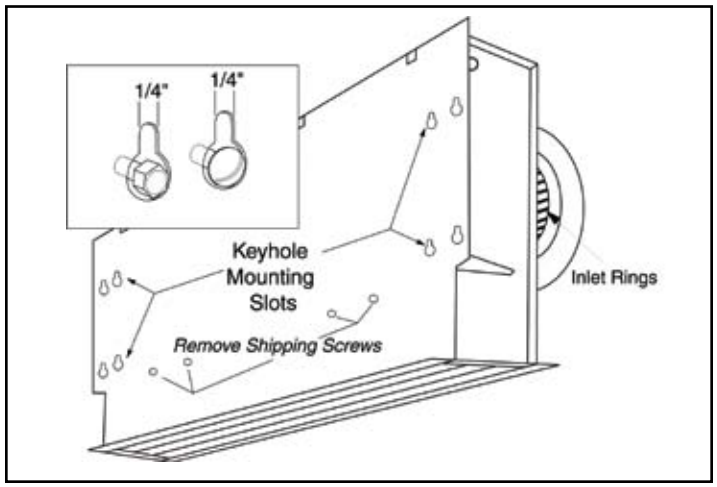

FIGURE 3 - Mounting Screws

A. The Aristocrat/Star Series Air Door is equipped with ¼" keyhole mounting slots on the back of each unit for wall mounting. It is recommended that a minimum of two keyhole slots are used from each end.

B. Determine the exact mounting location of the Air Door unit.
NOTE: A minimum of 4" is recommended above the unit to provide clearance for installation and removal of the unit blower assembly.

C. Choose four (4) keyhole slots that are located where suitable support is available for the unit. If the keyhole slots are not located where suitable support is available, drill new holes in the unit backplate where space is available.

D. Mark the wall in the top center of the keyhole slots or in the center of the holes drilled.

E. **Keyhole Mounting:**
Install the mounting hardware (supplied by others), allowing for space to hang the unit by not fully tightening. Lift and slip the blower assembly over the mounting hardware by grasping the inlet rings on the blower housing, without touching the blower wheels. Tighten the mounting hardware. **See Figure 4.**
Drilled Mounting Holes:
Lift the blower assembly by grasping the inlet rings on the blower housing, without touching the blower wheels, and install the mounting hardware (supplied by others) through the drilled holes.

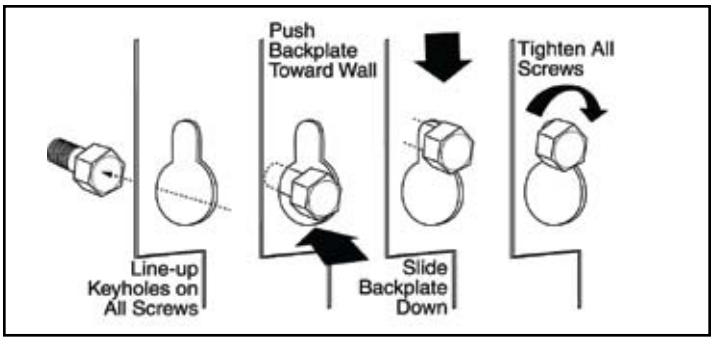

FIGURE 4 - Keyhole Mounting

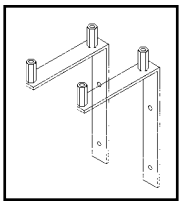
F. Do not install the cover housing at this time.

G. Proceed to **Section V - ELECTRICAL CONNECTIONS.**

IV. SUSPENDED MOUNTING *(Ceiling Suspension)*

NOTE: TWO (2) TOP MOUNTING BRACKETS (PART#66LWA000TOP)ARE REQUIRED PER UNIT FOR SUSPENDED MOUNTING.



To prevent damage to the Air Door during shipping, the unit is shipped with each blower attached to the back plate by two phillips head screws. These screws should be removed before installation. **See Figure 3.**

A. The Aristocrat/Star Series Air Door is equipped with keyhole mounting slots on the back of the unit. The top mounting brackets are designed to attach to these keyhole slots.

B. Attach the top mounting brackets to the unit using the hardware provided.

C. Determine the exact mounting location of the Air Door unit.

D. Attach ⅜" threaded rods or other suitable hardware to the coupling nuts, located on the mounting bracket(s).

E. Do not install the cover housing at this time.

F. Proceed to **Section V - ELECTRICAL CONNECTIONS.**

V. ELECTRICAL CONNECTIONS

All electrical wiring and connections **MUST** be performed by qualified personnel in accordance with the latest edition of the National Electrical Code ANSI/NFPA No. 70 or, in Canada, the Canadian Electrical Code, Part 1-C.S.A. Standard C22.1 and local codes and regulations.

A. Check the rating nameplate on the unit for supply voltage and current requirements. A separate line voltage supply with a suitable branch circuit protection device should be run directly from the main electrical panel to the unit. A disconnect switch for each branch circuit is a required part of this installation.
See Tables 2 & 3.

B. All field wiring must be copper with a minimum insulation of 60° C within approved conduit. If any of the wire supplied with the unit must be replaced, it must be replaced with copper wiring with a minimum insulation of 90° C.

C. Remove the junction box cover located on the right-hand side of the unit. **See Figure 5.**

D. Connect all supply and control circuit wires according to the wiring diagram. To connect wiring from the left-hand side, an optional knockout is provided.

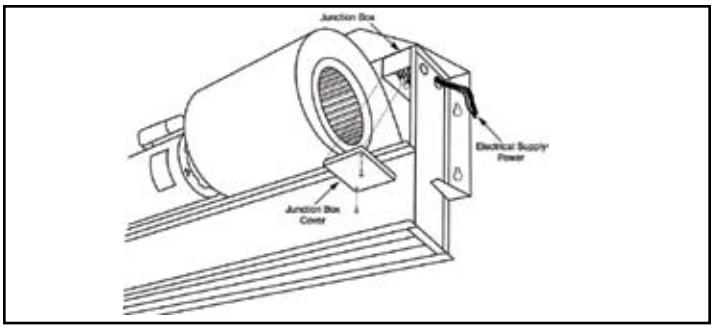


FIGURE 5 - Junction Box

NOTE: Electric heated units may be provided with a line voltage thermostat. Mount and wire thermostat according to instructions and the wiring diagram.

E. Install the cover housing and attach it temporarily at each end of the unit with two of the cover screws provided. Final assembly should be done after airflow adjustments. **See Figure 6.**

F. Switch on the power at the service disconnect. Turn on the unit and check the sequence of operation against the wiring diagram.

G. Proceed to **Section VI - MECHANICAL CONNECTIONS** for electric heated units, otherwise proceed to **Section VII - AIRFLOW ADJUSTMENTS**

VI. MECHANICAL CONNECTIONS

A. **ELECTRICALLY HEATED MODELS**

The heater circuit may be controlled by a remote thermostat, or manually through a remote mounted three position - fan only/off/fan with heat switch. Overheating protection is provided by auto reset thermal cutouts built into the blower assembly (see wiring diagram). Proceed to **Section VII - AIRFLOW ADJUSTMENTS.**

MOTOR VOLTAGES/AMP DRAWS					
Horsepower	3/4	3/4	3/4	1/2	1/2
Speed	1	1	1	3	3
Volts	120	208/240	480	120	208/240
Phase	1	1	1	1	1
Hertz**	50/60	50/60	50/60	50/60	50/60
Amps per Motor	7.5	3.8	1.8	7.2	4.0

** Operation at 50 HZ will generate approximately a 17% reduction in performance.

TABLE 2 - Motor Amp Ratings

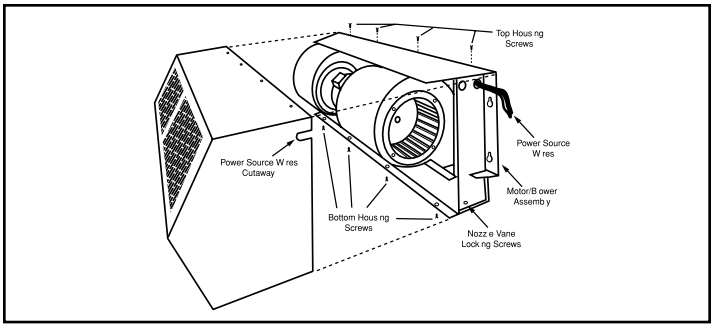

FIGURE 6 - Removing Cover

VII. AIRFLOW ADJUSTMENTS

A. With the Air Door operating and the door in its full open position, check to see that nothing is obstructing the air flow at the discharge nozzle vanes.

B. Find the air stream split location. Hold a handkerchief, by its corners, approximately 12" above the floor. Gently move the handkerchief back and forth in the doorway. Make sure the air is being directed to both the inside and the outside. The split location is indicated where the handkerchief is vertical with minimal or no fluttering. **See Figure 7.**

C. Adjust the discharge nozzle vanes so the split location is approximately 3" outside the doorway. This is accomplished by first de-energizing the unit. Remove the cover housing, loosen the nozzle vane locking screws and adjusting vanes.

D. Install remaining screws in cover housing.

TABLE 3

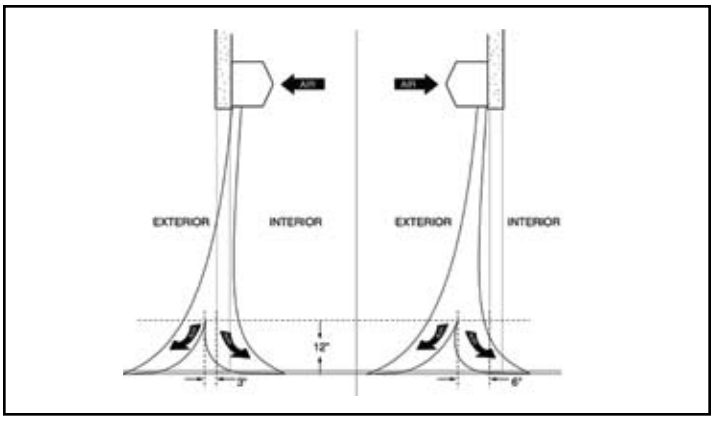

FIGURE 7 - Air Flow Adjustment

VIII. MAINTENANCE AND CLEANING

CAUTION: ELECTRIC SHOCK HAZARD

Disconnect power whenever servicing unit. More than one disconnect may be required to de-energize unit.

Keep your Air Door operating at peak efficiency by cleaning the blower wheels, motor(s) and intake grille. Buildup of dust on the blower wheels can cause vibration, noise and excessive wear on the motor bearings. The frequency of cleaning will depend on the environment where the unit is operating.

Dirty, dusty or greasy environments could require a cleaning schedule of once every two months. Otherwise, the unit(s) should be scheduled for cleaning a minimum of once every (6) months. To access the interior of the unit:

A. Disconnect and lockout power to the unit. Remove unit cover housing by removing screws from the top and bottom of unit. Slide cover housing away from blower assembly to remove. If the unit has a filter, it should be removed and cleaned at this time. The filter is located in the cover housing and held in place by wing nuts and clips. **See Figure 8.**

B. Vacuum and scrape (if necessary) to remove the buildup of dirt and debris from the interior of the Air Door. The motor(s) are permanently lubricated and require no additional lubrication. Reinstall the cover housing.

C. Switch the power on after cleaning.

CAUTION: STAND CLEAR OF THE UNIT OR WEAR SAFETY GOGGLES AS LOOSE DEBRIS MAY BE PRESENT AND MAY EXIT THE NOZZLE.

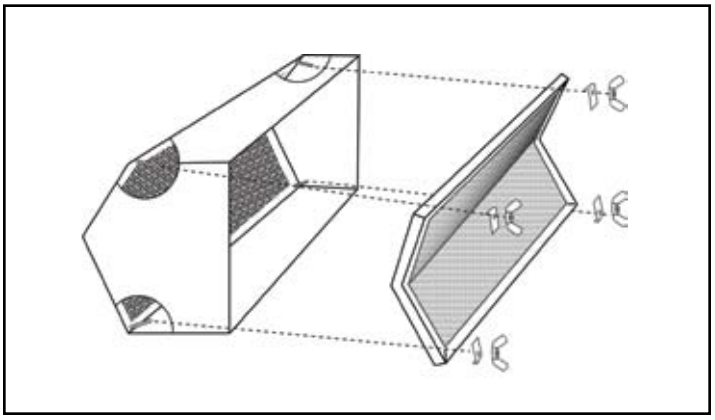

FIGURE 8 - Filter Replacement

IX. SERVICE

CAUTION: ELECTRIC SHOCK HAZARD Disconnect power whenever servicing unit. More than one disconnect may be required to de-energize unit.

*Any service performed on the Aristocrat/Star Series Air Door **MUST** be done by qualified personnel.*

Berner Air Doors require very little servicing. All parts are easily accessible for periodic inspection and maintenance. Units should be cleaned at least twice a year. Your particular application (the amount of dirt and dust in the air) and location of the unit(s) will determine how often your unit(s) will need to be cleaned and serviced. All motors have permanently lubricated, sealed, sleeve bearings and require no maintenance.

A. Fan Wheel Removal - Ambient and Electric Heated

1. Disconnect and lockout power to the unit. Remove unit cover housing by removing screws from the top and bottom of unit. Slide cover housing away from blower assembly to remove.
2. If unit is equipped with inlet rings and/or tri-arm bearings, remove outside ring and/or bearing using a blade screw driver or ¼" nut driver. If unit does not have inlet rings proceed to next step.
3. Loosen **(do not remove)** 5/32" Allen head set screw from hub of fan wheel. Note: a T-handle Allen wrench may be inserted through hole in fan housing and fan blade with semi-circle notch.
4. Carefully slide fan wheel out of fan housing.
5. Reinstall fan wheel and align set screw with flat on motor shaft.
6. Slowly tighten set screw while gently rocking fan wheel back and forth to settle set screw perpendicular to motor shaft flat.
7. Reinstall inlet ring and/or bearing if necessary.
8. Reinstall unit cover housing and switch on power.

B. Motor Removal - Ambient and Electric Heated

1. Disconnect and lockout power to the unit. Remove unit cover housing by removing screws from the top and bottom of unit. Slide cover housing away from blower assembly to remove. For electric heated units, mark connections and disconnect four spade wire terminals from electric heater(s).
2. Unplug wiring harness from motor.
3. Loosen **(do not remove)** 5/32" Allen head set screw from hub of each fan wheel attached to motor. Note: a T-handle Allen wrench may be inserted through hole in fan housing and fan blade with semi-circle notch. If unit is equipped with an extended shaft and coupling for a three fan, one motor construction, this fan assembly must be disconnected from motor shaft. Loosen 5/32" set screw on third fan wheel hub. Loosen set screw on motor shaft side of coupling (silver coupling - 5/32" Allen wrench, black coupling - 9/64" Allen wrench). Slide coupling and shaft off motor shaft by gently pushing it through third fan hub.
4. Remove four phillips head screws from each fan housing that has a fan attached to motor.
5. Remove each fan and housing assembly from motor shaft by sliding away from motor. After fan wheel is off motor shaft, remove assembly by rotating it away from the blower assembly.

6. While supporting motor, loosen and remove two clips that hold motor with a straight blade screw driver or 5/16" nut driver.
7. Remove motor.
8. Install motor in reverse order of removal.

C. Fan Wheel and Housing Removal - Ambient and Electric Heated

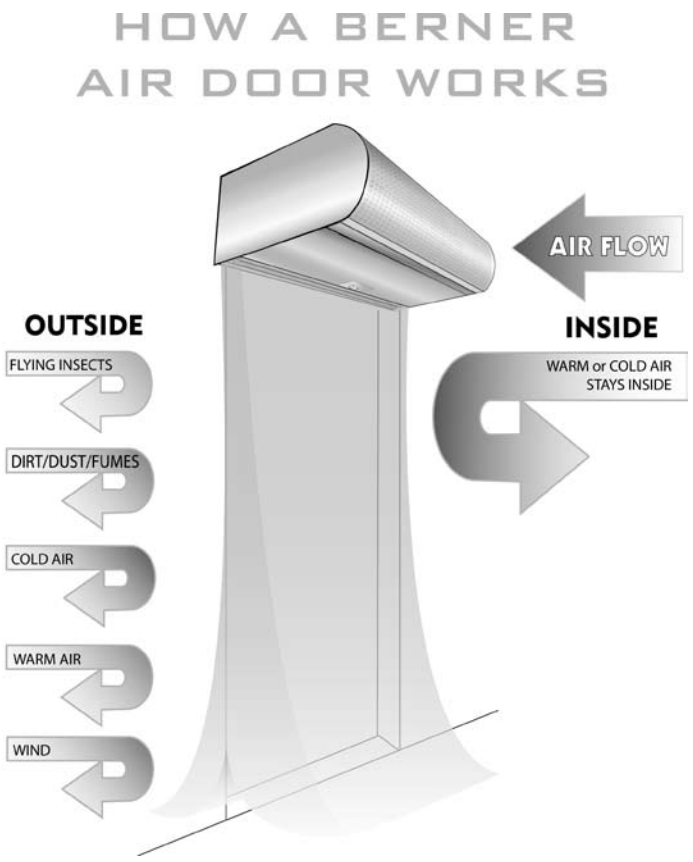
1. Disconnect and lockout power to the unit. Remove unit cover housing by removing screws from the top and bottom of unit. Slide cover housing away from blower assembly to remove. For electric heated units, mark connections and disconnect four spade wire terminals from electric heaters.
2. Loosen **(do not remove)** 5/32" Allen head set screw from hub of fan wheel. Note: a T-handle Allen wrench may be inserted through hole in fan housing and fan blade with semi-circle notch.
3. Remove four phillips head screws from fan housing.
4. Remove fan and housing from motor shaft by sliding assembly away from motor. After fan wheel is off of motor shaft, remove assembly by rotating it away from blower assembly.
5. Reinstall in reverse order of removal.

D. Filter Replacement

1. Disconnect and lockout power to the unit. Remove unit cover housing by removing screws from the top and bottom of unit. Slide cover housing away from blower assembly to remove.
2. Filter is located in cover housing. Remove wing nuts and clips that hold filter. **See Figure 8.**
3. Remove and replace filter. Note: clean aluminum filters with water and a mild detergent, rinse thoroughly.
4. Reinstall in reverse order of removal.
   Note: do not force or over tighten wing nuts as they will thread through the outside of cover housing.

E. Electric Heater Removal - Electric Heated

1. Disconnect and lockout power to the unit. Remove unit cover housing by removing screws from the top and bottom of unit. Slide cover housing away from blower assembly to remove. Mark connections and disconnect four spade wire terminals from electric heater(s).
2. Loosen **(do not remove)** 5/32" Allen head set screw from hub of fan wheel. Note: a T-handle Allen wrench may be inserted through hole in fan housing and fan blade with semi-circle notch.
3. Remove four phillips head screws from fan housing.
4. Remove fan and housing from motor shaft by sliding assembly away from motor. After fan wheel is off of motor shaft, remove assembly by rotating it away from blower assembly.
5. Remove electric heater element from fan housing by removing three screws with ¼" nut driver.
6. Reinstall in reverse order of removal.



TROUBLESHOOTING

SYMPTOMS	CAUSE	REMEDY
NO AIR	• Electrical Power supply line open (no power)	• Check power source, check method of control in ON position
	• Fuse blown/circuit breaker tripped	• Replace fuse(s)/reset breaker
	• Motor overload tripped	• Internally protected motor - should reset automatically after cool-down, if not replace motor.
	• Failed switch	• Replace switch
	MOTOR RUNNING/FANS ARE NOT ROTATING	
	• Broken or fan hub	• Replace fan
	• Shaft rotating inside fan	• Tighten set screws/tighten fan on shaft
	• Broken/Loose coupling	• Replace/Tighten coupling
	ELECTRICAL CONTROLS NOT FUNCTIONING WHEN DOOR IS OPEN	
	• Selector switch is in off position	• Turn switch to "ON" position
	• Door limit switch not operating	• Repair or replace limit switch
MINIMUM	• Air directional discharge vanes misadjusted	• Adjust vanes to proper position, see instructions
	• Inadequate intake clearance	• Move air curtain or remove obstruction Provide adequate space for air curtain
	• Blower motor operates below speed	• Improve voltage
	• Fan rubbing against housing	• Free fan from housing
	• Fan wheels clogged with dirt	• Clean and vacuum fan wheels
AIR IS NOT HITTING FLOOR	• Air stream too weak	• Adjust nozzle to proper position, adjust motor speed; see installation instructions
	• Air stream hits obstruction	• Remove obstruction or reposition air curtain (move out 3/8" for every 1" up from the door)
	• Negative pressure	• Relieve negative pressure by providing make-up air
UNEVEN AIR	• Shaft rotating inside fan	• Tighten set screws/Replace fan
	• One motor not operating	• Repair or replace motor/Check electrical connections
EXCESSIVE AIR MOVEMENT AT DOORWAY	• Nozzle not angled out far enough	• Adjust nozzle angle to outside
	• Air movement too cold	• Add auxiliary heat to overcome wind chill
	• Pushing air outside building	• Adjust discharge angle back into building
	SEE **AIR IS NOT HITTING FLOOR** SYMPTOMS	
	ELECTRICALLY HEATED MODELS	
NO HEAT	• Switch turned to "OFF" position	• Turn switch on
	• Thermostat not set properly	• Change thermostat setting
	• Coils burned out due to lack of air	• Correct airflow problem; replace coils
	• Automatic reset thermal cutout failed in open position	• Replace automatic thermal cutout
	• Manual reset thermal cutout tripped	• Reset manual thermal cutout
	• Defective switch	• Replace switch
NOT ENOUGH HEAT	• Thermostat in wrong location - thermostat too close to discharge	• Move thermostat away from air stream
	• Improper voltage	• Supply proper voltage
	• Thermostat not set properly	• Change temperature setting
TOO MUCH HEAT	• Thermostat in wrong location	• Move thermostat closer to air stream
	• Thermostat not set properly	• Change temperature setting
	• Insufficient air over coil	• Remove restriction on intake
	• Improper voltage	• Supply proper voltage

WARRANTY

Berner International warrants all new equipment to be free of defects in workmanship and material for a period of five years (5 years) on unheated models and two years (2 years) on heated models from the original date of shipment, provided the equipment has been properly cared for, installed and operated in accordance with the limits specified on the nameplate and The Company's instructions.

The Company will correct by repair or replacement, at its option and expense, any proven defects in said apparatus, subject to the above conditions, provided that immediate written notice of such defects is given to The Company. The warranty does not include any labor incurred for the removal or installation of defective part(s). The Company reserves the right to inspect, or have inspected by a qualified representative, any apparatus at the place of installation before authorizing repair or replacement. Repair or replacement will be made F.O.B. factory with any applicable transportation charges to be borne by the customer. Merchandise not of The Company's manufacture supplied in piece, or in component assemblies, is not covered by the above warranty, but The Company will give the customer the benefit of any adjustment as made with the Manufacturer.

This warranty is void if the apparatus has been tampered with in any way or shows evidence of misuse.

The Company will not assume any expense or liability for repairs made outside its factory without proper written consent from its service manager, nor for any transportation charges on apparatus returned to the factory without written authorization by The Company.

Nothing in the above warranty provisions, however, shall impose any liability or obligation of any type, nature or description upon Berner International if Berner has not received payment in full for the apparatus in question.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HERE OF INCLUDING THE IMPLIED WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

LIMITATION OF DAMAGES

Notwithstanding anything to the contrary above, customer's exclusive remedy for any and all losses or damages resulting from the sale of The Company's equipment under this agreement, including but not limited to, any allegations of breach of warranty, breach of contract, negligence or strict liability, shall be limited, at The Company's option, to either the return of the purchase price or the replacement of the particular equipment for which a claim is made and proved. In no event shall The Company be liable for any special, consequential, incidental or indirect losses or damages from the sale of The Company's equipment under this agreement.

INTELLISWITCH®

QUICK START PROGRAMMING 8-9
FAQ's (FREQUENTLY ASHED QUESTIONS) 10-11
INTELLISWITCH® DETAILED PROGRAMMING 12-18

WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

A. Use this unit only in the manner intended by the manufacturer. If you have any questions, contact the manufacturer.
B. Before servicing or cleaning unit, switch power off at service panel and lock the service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.
C. Installation work and electrical wiring must be done by qualified person(s) in accordance with all applicable codes and standards, including fire-rated construction. (See page 4 V. ELECTRICAL CONNECTIONS (NEC Code ANSI/NFPA No. 70)
D. Sufficient air is needed for proper combustion and exhausting of gases through the flue (chimney) of fuel burning equipment to prevent back drafting. Follow the heating equipment manufacturer's guideline and safety standards such as those published by the National Fire Protection Association (NFPA), and the American Society for Heating, Refrigeration and Air Conditioning Engineers (ASHRAE), and local code authorities.
E. When cutting or drilling into wall or ceiling, do not damage electrical wiring and other hidden utilities.

I. UNCRATING

Carefully examine the carton(s) for damage. If the carton is damaged, immediately notify the shipping company. **Do not delay in filing claim.** If the air door(s) were shipped on wooden skids, remove protective wood and banding straps securing the carton(s) to the skid. Open the carton(s) and remove all protective packaging. Immediately verify that the electrical rating nameplate located on the cover matches electrical power supply available. Retain the shipping carton(s) until the air door(s) are installed and properly operating.

ACCESSORIES: If the air door(s) were ordered with optional electrical accessories, the accessories will be found in the carton containing the air door or in a separate carton(s) accompanying the air door(s). Check all of the cartons/skids for accessories before discarding.

II. MOUNTING PREPARATION

INDOOR MOUNTING ONLY - Environmental/Insect/Dust Control

A. The In-Ceiling Mount air curtain is designed to be an effective barrier against cold drafts in the winter and hot air in the summer. To achieve optimum protection, the unit should be mounted on the inside of the building, flush with the ceiling, so that the airstream can pass as close to the top of the door opening as possible. To ensure peak performance keep the air stream free of obstructions.

B. **The air door will not perform properly if negative air pressure exists in the building. Under these conditions, a means for makeup air to the building must be provided so that the air pressure on both sides of the opening is in balance.**

C. Before mounting the air door, check the supporting structure to verify that it has sufficient load-carrying capacity to support the weight of the unit(s). The mounting hardware (supplied by others) should be capable of supporting a minimum of three (3) times the weight of the unit. **See Table 1.**

D. When determining the mounting location for the unit(s), make sure that nothing interferes with the curtain of air developed when the discharge vanes are directed from 0° to 20° toward the door opening. If the air stream strikes any obstruction (the top edge of the doorway, a door opening device, etc.), the effectiveness of the unit will be greatly reduced. **See Figure 1.**

E. For optimum performance, the bottom of the discharge nozzle should be located in such a manner that it is spaced out from the wall 3/8" for every inch the unit is above the door opening.

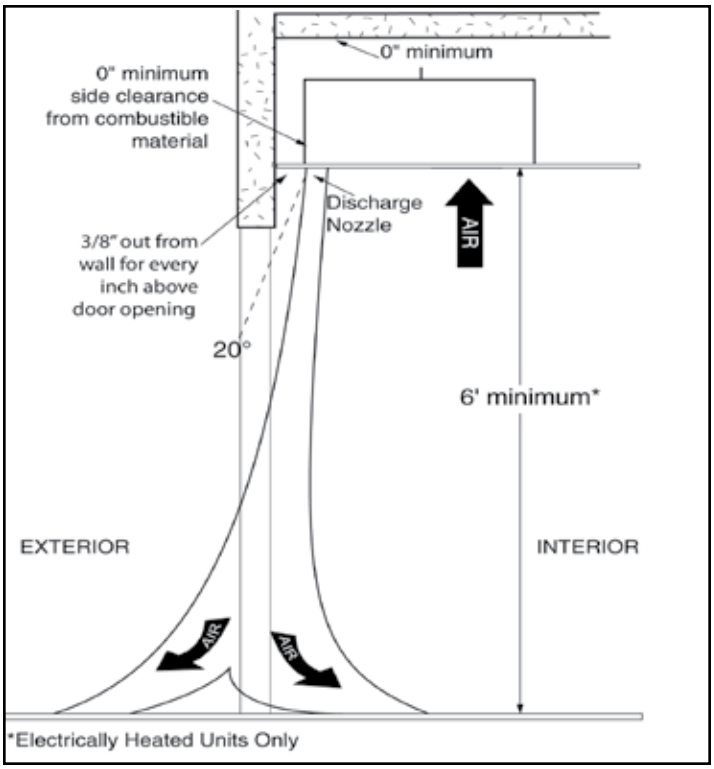

Figure 1

F. Electric heated unit(s) shall:
1. Have a minimum clearance of at least 6' between the bottom of the unit and the floor.
2. Be installed Indoors Only.
3. The unit is shipped without the front and back trim installed to protect it from shipping damage. This trim need not be installed until after the unit is hung. **See Figure 2.**

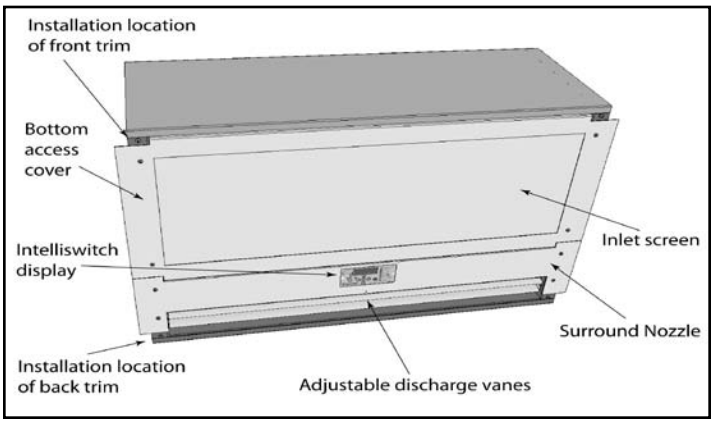

Figure 2

Model	Total Net Weight - Ambient	Total Net Weight - Electric Heat	Total Net Weight - Steam/ Hot Water Heat
ICA/FCA1036A	100	104	115
ICA/FCA1042A	107	111	124
ICA/FCA1048A	113	117	133
ICA/FCA1060A	133	137	160
ICA/FCA2060A	170	178	197
ICA/FCA2072A	177	185	205
ICA/FCA2084A	202	210	237
ICA/FCA2096A	215	223	256
ICA/FCA3096A	252	264	293
ICA/FCA2108A	222	230	267
ICA/FCA3108A	259	271	304
ICA/FCA3120A	269	281	318
ICA/FCA3132A	291	303	346
ICA/FCA3144A	304	316	364
ICA/FCA4144A	341	357	401

Table 1

III. MOUNTING

A. The ICA/FCA series air door enclosure is equipped with four 5/16"-18 threaded inserts on the top of the unit for suspended mounting. **See Figure 3.**

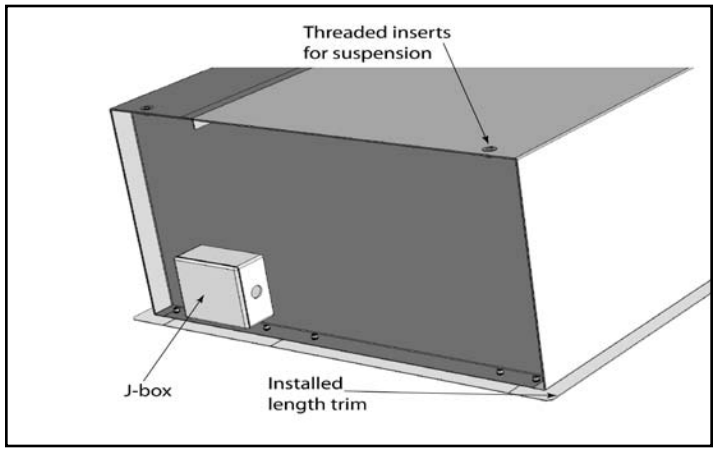

Figure 3

For lighter lifting the blower assembly may be removed so that the enclosure can be easily installed. See Section VIII: SERVICE for instruction on removing the blower assembly.

B. The electrical junction box is located on the outside of the enclosure on the left side of the unit.
C. Determine the exact mounting location of the air door unit.
D. Create structural attachment points to suspend the unit above the ceiling so that the unit is centered and parallel with the door opening.
E. Suspend air door cabinet by attaching threaded rods to the unit and support structures. Adjust unit position so the bottom of the cabinet is flush with the underside of the ceiling.
F. Install the front and back trim using the provided fasteners. **See Figure 3.**
G. Finish off ceiling edge as required.

NOTE: **Finishing materials must not overlap the bottom of the cabinet to allow the intake screen to open freely.**

H. If the blower assembly was removed, re-install it along with nozzle surround and bottom access cover.

IV. ELECTRICAL CONNECTIONS

All electrical wiring and connections **MUST** be performed by qualified personnel in accordance with the latest edition of the National Electrical Code ANSI/NFPA No. 70 or, in Canada, the Canadian Electrical Code, Part 1-C.S.A. Standard C22.1 and local codes and regulations.

A. Check the rating nameplate on the unit for supply voltage and current requirements. A separate line voltage supply with a suitable branch circuit protection device should be run directly from the main electrical panel to the unit. A disconnect switch for each branch circuit is a required part of this installation. **See Table 2 & 3** for component electrical loads. See the voltage label on the unit for circuiting and total electrical load.

Motor Voltages/Amp Draws									
Volts	120	208	240	208	240	480	600	220	380
Phase	1	1	1	3	3	3	3	1	1
Hertz	60	60	60	60	60	60	60	50	50
Amps per Motor	6.5	3.5	3.5	3.5	3.5	1.4	1	3.5	3.5

Table 2

Heater Amp Draws for Selected kW						
Heater kW	Heater kW Amp Draws					
	208/1	240/1	208/3	240/3	480/3	600/3
6 kW	28.9	25.1	16.7	14.5	7.2	6.0
8 kW	38.5	33.5	22.2	19.3	9.6	8.0
10 kW	48.1	41.9	27.8	24.1	12.0	10.0

32 kW	N/A	N/A	88.9	77.1	38.4	32.0
40 kW	N/A	N/A	111.2	96.4	48.0	40.0
42 kW	N/A	N/A	116.8	101.2	50.4	42.0
56 kW	N/A	N/A	155.7	135.0	67.2	56.0
Amps per kW	4.81	4.19	2.78	2.41	1.20	1.00

Table 3

B. All field wiring must be copper with a minimum insulation of 60°C within approved conduit. If any of the wire supplied with the unit must be replaced, it must be replaced with copper wiring with a minimum insulation of 90°C.
C. Electric, steam and hot water heated air doors are factory equipped with an air curtain mounted solid state temperature sensor cable (for Intelliswitch® thermostat) located on the outside of the left endplate. Depending on where the temperature is to be measured, the sensor may be left on the endplate or positioned elsewhere. Do not put any clamps on the rubber coated tip.
D. Remove the junction box cover.
E. Connect all supply and control circuit wires according to the wiring diagram provided.

NOTE: **For Electric heated air doors provided with the op tional remote thermostat, mount and wire the thermostat according to instructions and wiring diagram**.

F. Master/Slave connection, if two or more air doors are to be linked together for Master/Slave operation, continue, otherwise, skip to Step G.

NOTE: **The air door must have been ordered from the factory with this option.**

NOTE: **One Intelliswitch® serial cable assembly (part # 505SC***INT485-A) is required for every air door that is to be used as a Master/Slave. "***" denotes length of cable in feet "008"= 8 ft. long.**

For Master/Slave operation, a serial cable connection must be made between the Intelliswitch® control boards of each air door to be linked.

1. Disconnect power to all the air doors
2. Find the (RS485) phone jack couplers protruding through the hole in the endplate next to the j-box.
3. The serial cable ordered for each air door will be coiled up and attached to the left endplate.

NOTE: **There will be one less serial cable than the number of air doors ordered. E.g. Two air doors together will need only one cable; three air doors together will need two cables, etc. Any extra cables can be kept as spares.**

4. Plug the (RS485) male phone jack on the end of the serial cable into the empty coupler on the next air door.
5. Continue process for all air doors that are to be connected serially.
6. Serial cable connections are capable of two way communication. It does not matter to which coupler the cables are connected.
7. The first and last air door in the group will each have an empty coupler after all connections are made. If there are only two air doors connected, each will have an empty cable coupler.

NOTE: **If a longer cable is required than was supplied, it can be ordered from the factory or made by using standard 4 wire flat telephone cable, phone jack connectors and the proper crimping tool.**

G. Remote Mounted Display Faceplate – If operation of the Intelliswitch® is to be through a Factory Ordered Remote Mounted Display Faceplate, continue, otherwise, skip to step H.

NOTE: **Maximum mounting distance between the Display Faceplate and the air door is 20'.**

1. When the remote faceplate option is ordered from the factory, the air door comes equipped with the blank faceplate already installed and the 20' ribbon cable attached. The Display Faceplate is shipped loose, ready for field installation.
2. Locate the male end of the conductor ribbon cable and run it to the remote display location. The cable is minimum CL2 rated and should not need to be in conduit.
3. Connect the female end of the ribbon cable to the 14-pin socket on the back of the display board with the cable approaching from the top and the red ribbon indicator to the right (when facing the front of the display board).
4. Mount Display Faceplate to the wall.

H. For Electric, Steam and Hot Water air doors proceed to **Section V - Field Connections** otherwise proceed to **Section VI - Airflow Adjustments**

V. FIELD CONNECTIONS

A. ELECTRICALLY HEATED MODELS

The heater circuit may be controlled by a remote thermostat or manually through the Intelliswitch® located on the discharge side of the air door. Overheating protection is provided by auto reset thermal cutouts built into the heater coil assembly (see the wiring diagram).

B. STEAM AND HOT WATER HEATED MODELS

Piping should be done in accordance with local codes, regulations and standard practices. Connect the building system supply and return to the ¾" MPT nipples on the heating coil. **See Figure 4.**

VI. AIRFLOW ADJUSTMENTS

A. With the air door operating and the door in its full open position, check to see that nothing is obstructing the air flow at the discharge nozzle vanes.

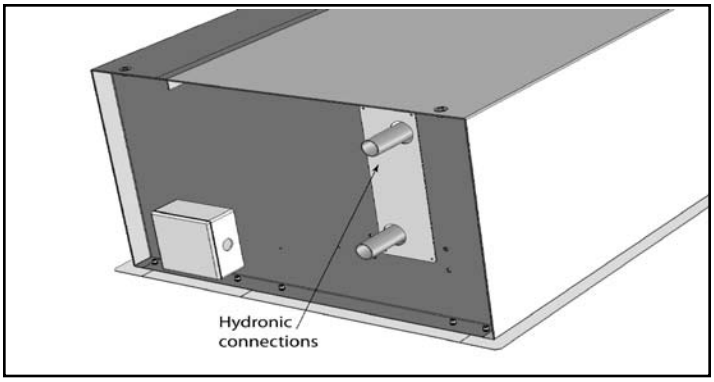

Figure 4

B. Find the air stream split location. Hold a handkerchief, by its corners, approximately 12" above the floor. Gently move the handkerchief back and forth in the doorway. Make sure the air is being directed to both the inside and the outside. The split location is indicated where the handkerchief is vertical with minimal or no fluttering. **See Figure 5.**

C. Adjust the discharge nozzle vanes so the split location is approximately 3" outside the doorway. Loosen the nozzle vane locking screws and adjusting the vanes.

VII. MAINTENANCE AND CLEANING

CAUTION: **ELECTRIC SHOCK HAZARD Disconnect power when ever servicing unit. More than one disconnect may be required to de-energize unit.**

Keep your air door operating at peak efficiency by cleaning the blower wheels, motor(s) and intake grille. Buildup of dust on the blower wheels can cause vibration, noise and excessive wear on the motor bearings. The frequency of cleaning will depend on the environment where the unit is operating.

Dirty, dusty or greasy environments could require a cleaning schedule of once every two months. Otherwise, the unit(s) should be scheduled for cleaning a minimum of once every (6) months. To access the interior of the unit:

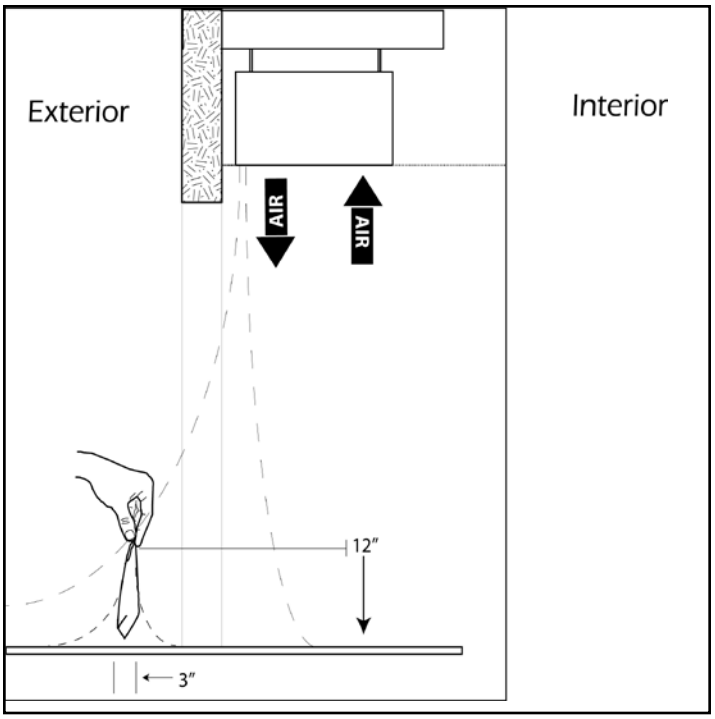

Figure 5

A. Disconnect and lockout power to the unit. If necessary remove the blower assembly. **See Section VIII: Service** for instructions on how to remove blower module.
B. Remove the bottom access cover by removing (4) Phillips head machine screws located at the cover's corners. **See Figure 6.**
C. Vacuum and scrape (if necessary) to remove the buildup of dirt and debris from the interior of the air door. The motor(s) are permanently lubricated and require no additional lubrication.
D. Pull the filter out from underneath the struts of the bottom access cover. It is easiest to work from the middle, pulling one side out and then the other. Spray the filter with warm, soapy water, rinse, and pad dry.
E. Replace Filter.
F. Reinstall the bottom access cover.
G. Switch the power on after cleaning.

CAUTION: **STAND CLEAR of the unit or wear safety goggles as loose debris may be present and may exit the nozzle.**

VIII. SERVICE

CAUTION: **ELECTRIC SHOCK HAZARD Disconnect power when ever servicing unit. More than one disconnect may be required to de-energize unit.**

Any service performed on the ICA/FCA air door MUST be done by qualified personnel.

Berner air doors require very little servicing. All parts are easily accessible for periodic inspection and maintenance. Units should be cleaned at least twice a year. Your particular application (the amount of dirt and dust in the air) and location of the unit(s) will determine how often your unit(s) will need to be cleaned and serviced. All motors have permanently lubricated, sealed, sleeve bearings and require no maintenance.

A. To remove the blower module and clean or replace the fans and motor:
   1. Disconnect and lockout power to the unit.
   2. Remove the bottom access cover by removing (4) Phillips head machine screws located at the cover's corners. **See Figure 6.**
   3. If desired, the nozzle surround may be removed to provide more working room. To remove the nozzle surround, remove the (4) Phillips head machine screws from the corners. The Intelliswitch® ribbon cable must also be disconnected from the back of the display circuit board

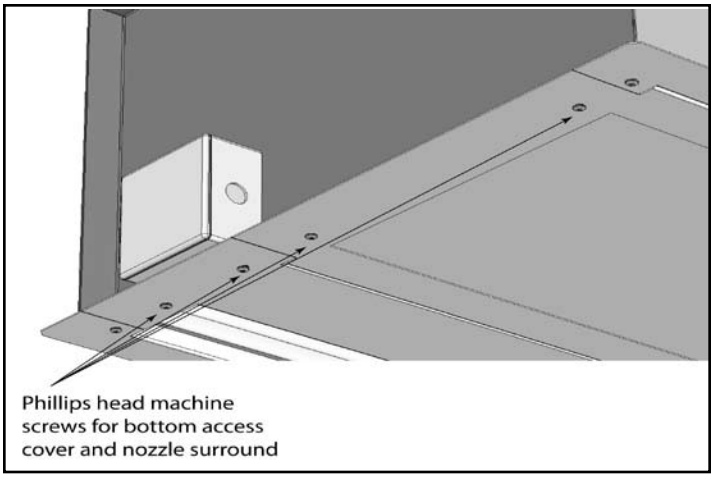

Figure 6

   before the nozzle surround can be set aside.
   4. Disconnect motor power wires/harness from motor.
   5. If the unit has electric heat, the heaters need to be disconnected from supply wiring. Each fan housing will have a heating element on both of its sides, spanning the inlet venturi. Each heating element will have (2) ¼" quick disconnects for power supply wiring. In addition, the heating elements located on the outside of the module will have (2) ¼" quick disconnects for the auto reset thermal cutouts. Label and separate all of those connections. **See Figure 7**.
   6. Using a 5/16" hex driver, loosen and remove the (4) self drilling screws that hold the blower plate to the frame of the unit. Remove the two screws at the top of the product last, as after they are removed, the module will be

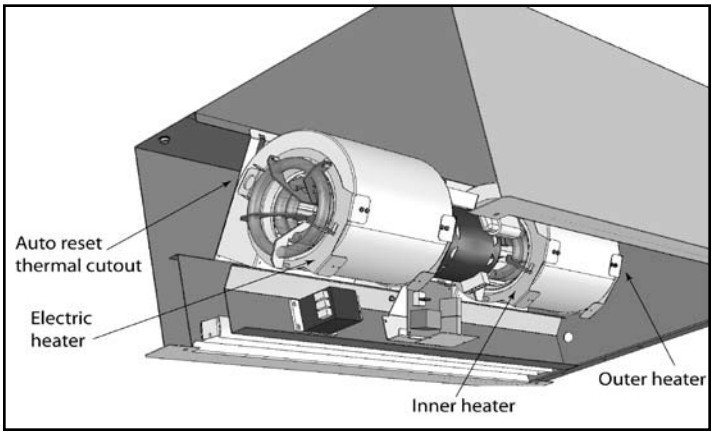

Figure 7

free to drop out of the cabinet. **See Figure 8** for location of all screws.

7. Wearing protective gloves, hold the module by the motor, and rotate the module top forward and drop it down through the bottom of the unit. **See Figure 9**.
8. To remove the fans and/or motor, loosen the set screws in the fan wheel hubs by using a 5/32" Allen wrench that is at least 6" long. The set screw can be accessed up through the fan's discharge.
9. Next, remove the two blower housings by removing the (8) screws that attach the fan housings to the blower plate. When the fan housings are free, slide them and their fan wheels off to each side.
10. Remove the motor clips from the motor mounts, disconnect the motor ground wire if necessary, and lift the motor up and out of its cradle.
11. Reinstall in reverse order of removal.

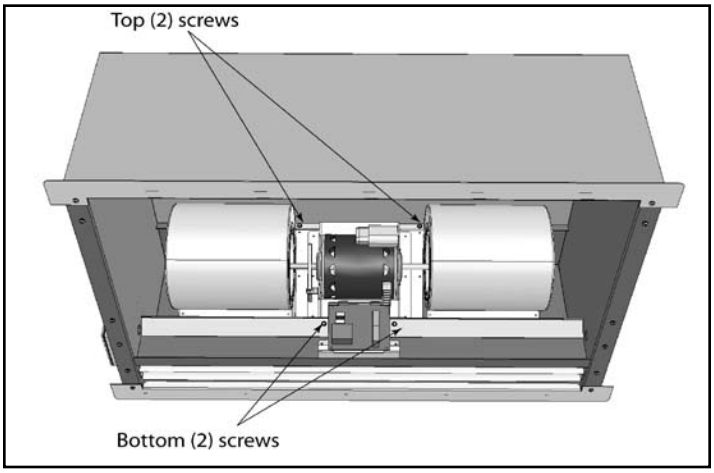

Figure 8

B. To Replace the Electric Heater:

1. Disconnect and lockout power to the unit.
2. Remove the bottom access cover.
3. The blower module does NOT need to be removed from the unit to replace electric heaters, unless you have one of the following models: ICA1036, ICA2060, or ICA3096. If you have one of these models, you will need to remove the blower module to replace the outer heaters. If you need to remove the blower module, see **Section VIII Service, A.**
4. Label and detach the heater connections for supply power and for the auto reset thermal cutout.
5. Remove the (2) self drilling, heater retention screws holding the electric heater frame to the fan housing. **See Figure 10**.
6. Carefully maneuver the heater out from the fan and

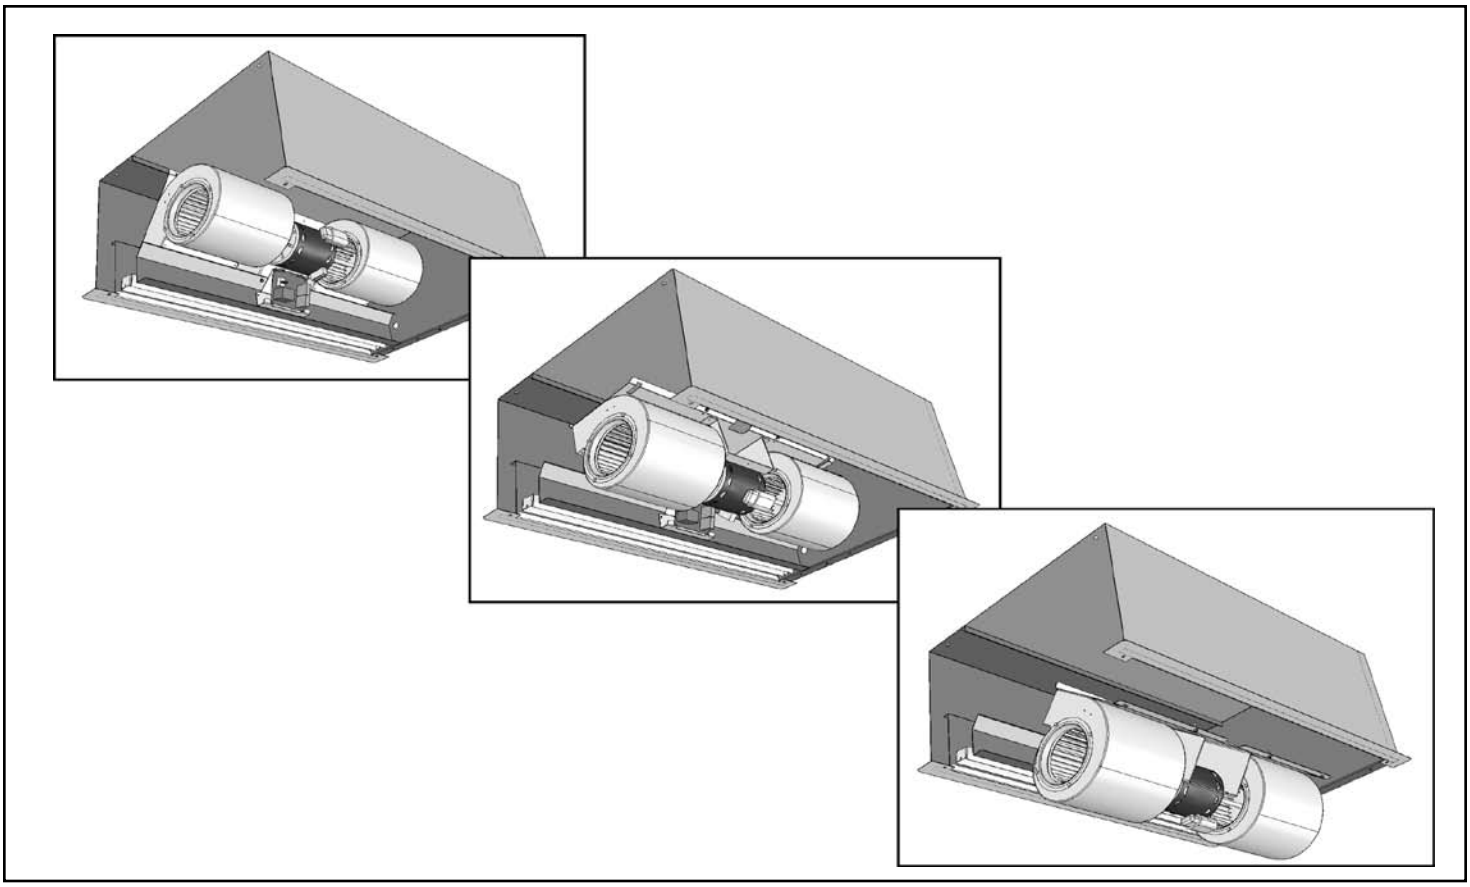

Figure 9

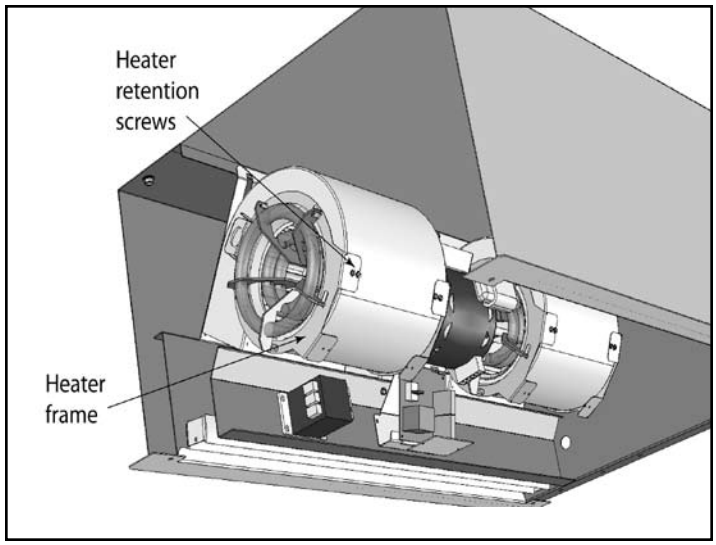

Figure 10

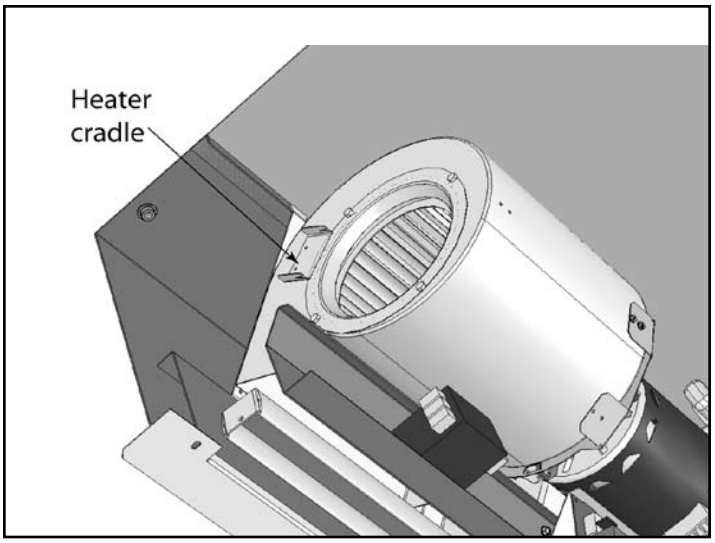

Figure 11

around the motor shaft.

7. Remove the pigtails from the old heater thermal cutout, and place them on the new heater.
8. To install the new heater, maneuver it into position making sure the frame of the heater sits in its cradle, which is attached to the fan. **See Figure 11.**
9. Reinstall the (2) self drilling screws using the existing holes in the fan housing. As the fan housings are constructed of thin gauge steel, be careful not to strip these holes.
10. Reconnect supply power and thermal cutout wiring.

End of Section

See the following pages for information on the Intelliswitch®, including: Quick Start Operation Guide, FAQ's, and Detailed Programming Guide.

How to operate your In-Ceiling Mount Air Door
that comes with a factory installed digital programmable controller called the Intelliswitch®

INTELLISWITCH® QUICK START OPERATION

www.intelli-how2.com

When power is turned on to the Air Door, all of the lights on the display will light briefly while the Intelliswitch® starts up. After startup the clock will then display. The Intelliswich is now ready to set.
NOTE: To adjust the clock, refer to section 4.5 Appendix A.

To operate the air door:

	Press the Down Arrow (Menu) button once. NOTE: If the Down Arrow button is pressed twice, the function will change from "Mode" to "Fan Speed".	Mode/Fan Speed indicator will light
	Using either the Left or Right Arrow buttons, scroll through the **Modes of Operation** until you reach the desired mode. *See below to determine which mode is right for you.*	

For detailed information of the Intelliswitch® Navigation and Operation please refer to Appendix A (see pages 12-18)

	Once the Mode of Operation is selected, press "OK" button to set and return to the clock or the down arrow to select and adjust any of the other available settings.	

Mode of Operation:

OFF	The unit will not run.	
ON	The unit will run continuously unless a start and stop time is programmed.	

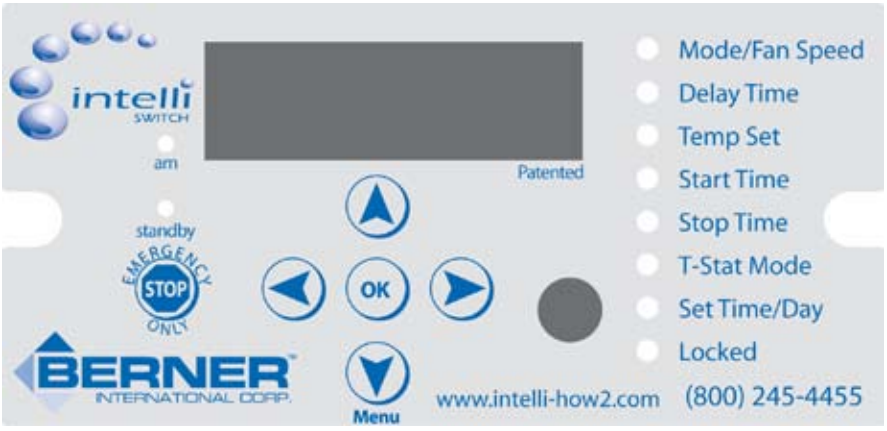
The following modes can be customized see "Programming the Intelliswitch®" for more info.

AUTO	For use with a door switch, the unit will operate only when the door is open.	
"delu" DELUXE	For use with a door switch, the unit will operate only when the door is open with a minimum 1 minute delay before turning off when it closes.	

Modes of Operation continued:

The following modes can be customized see "Programming the Intelliswitch®" for more info.

"PluS" COMFORT PLUS	For use on heated units only, requires a door switch. When the temperature drops below the thermostat set point and the door is closed, the unit will activate on a low speed and provide supplemental heating to the space. The unit will change to normal speed when the door is open. If the thermostat is still not satisfied when the door closes the unit will return to low speed until the set point is reached.	PLUS
"Pro1" PROGRAM 1	Recommended for unheated units. This setting will enable the air door to operate on Deluxe mode with a 1 minute time delay, 24 hours a day, 7 days a week. See Appendix A page 18 for more detailed information.	PRO1
"Pro2" PROGRAM 2	Recommended for heated units. This setting will enable the air door to operate on Deluxe mode with a 1 minute time delay from 8:00 am – 5:00 pm. From 5:01 pm – 7:59 am, the unit will operate on Comfort Plus with a 30 second time delay. See Appendix A page 18 for more detailed information.	PRO2
"Pro3" PROGRAM 3	Recommended for heated units. This setting will enable the air door to operate on Auto mode with a 30 second time delay, 24 hours a day, 7 days a week. See Appendix A page 18 for more detailed information.	PRO3



INTELLISWITCH® FAQ's (Frequently Asked Questions)

www.intelli-how2.com

WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK OR INJURY TO PERSONS, OBSERVE THE FOLLOWING: Before servicing or cleaning unit, switch power off at service panel and lock the service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.

Even though every In-Ceiling Mount unit is individually tested at the factory before shipment, on occasion improper functionality may be experienced. Here is a list of common questions:

Q. Why can't I change my settings?
A. The Intelliswitch® may be locked. If the Lock light is illuminated, the control is locked. To unlock, press and hold the left & right arrows simultaneously for 5 seconds. The Lock mode can also be protected with a PASScode. If the PASScode option is on, an attempt to unlock the control will display PASS and then a 0000 prompt. A four-digit code (available in the installation instruction book Appendix) must then be entered to unlock the control. Use the up and down arrows to select a number and the left and right arrows to select the digit to edit. Press OK when done. Note: If the AutoLock setting is on, the control will re-lock if there is no activity after 5 minutes.

Q. Why won't my heat work, even though fans are running?
A. The thermostat(s) or speed sensor may need adjusted or replaced.
1.) Make sure that the thermostat probe and/or remote thermostat are in the "On" position and set above ambient (room) temperature.
2.) Check internal and external thermostat status in the Diagnostics Menu for a faulty thermostat. To do this, hold the right arrow for five seconds until DIAG appears, then arrow down to the ts setting, if it displays "1" then the thermostat(s) is working (there is a call for heat).
3.) If no external thermostat is used, check to see if the internal probe is attached to the control board. Disconnect power to the unit, remove the display board and check that the beige sheathed cable is attached at both ends. If the thermostat(s) and settings are correct and you are still not getting heat, then check to see the fan speed. to do this, press the down arrow to reach the Mode/Fan speed setting. Use the right and left arrow to change the fan speed.
4.) Check to see if you can adjust the fan speed. If the speed sensor is bad there will be no speed control and the Intelliswitch® will not let the heat come on. If it is too difficult to determine a change in speed, the speed sensor can be checked by entering the DIAG menu and checking the first error code. If ER 10 displays, the speed sensor is recognized by the Intelliswitch®. If the code ER 11 is displayed, the Intelliswitch® does not recognize the sensor, and it may be faulty or need adjusted closer to the trigger bar. Turn off the power to the unit and remove the screen to check the distance between the sensor and the trigger located on the left side of the motor (use the bottom access cover for steam/hot water heated units). The sensor should be less than 1/16" from the trigger face. Check distance at both ends of trigger. Adjust if necessary.
5.) If there is still no heat or speed control, you may need a new speed sensor: consult factory.

Q. Why won't the Intelliswitch® light up?
A. There may not be power to the control.
1.) Check to see if the main power is turned on to the unit. Your air curtain may have multiple disconnects, be sure all are turned on.
2.) Verify that there is power to the board. **NOTE: ONLY QUAILIFED PERSONS SHALL CHECK POWER IN THE UNIT WITH THE POWER ON.** The power terminals are located directly behind the display. Remove two Phillips screws from the Intelliswitch® display to expose the power terminals and check the line voltage at spade terminals L2 and 120, 208 or 240 (depending on the voltage supplied to the unit).
3.) Check the ribbon cable connections to the display board for a loose connector or improperly connected cable (see Installation Instructions for correct cable connection).
4.) If there is line voltage power at the board terminals, the ribbon cable is correctly connected, and it is still not working, you may need a new circuit board: consult factory.
5.) If there is line voltage power at the board terminals, the ribbon cable is correctly connected, the speed sensor and the thermostat are working, and it is still not working, you may need a new circuit board: consult factory.

Q. Why won't my fans shut off?
A. The Intelliswitch® may be in the wrong mode or mis-wired.
1.) Check to see if the control is in the "ON" mode, if it is, then change the Mode to another setting.
2.) The T-Stat Mode may be set to the "both" setting and the thermostat is calling for both Fan and Heat, change the T-Stat Mode to "HEAT".
3.) If there is a door switch and the unit is in a mode that is activated by it, there could be a short, mis-wiring or mixup in components. Close the door and check the door switch status in the Diagnostics menu. Hold the right arrow for five seconds until DIAG appears, then arrow down to the ds setting, if it displays "1" then the door switch signal is closed (there is a call for fan). If the door is closed, the signal should be "0" or open.
4.) There could be a short in the field connections to the door switch or the door switch leads could be mis-wired. To test, disconnect the door switch connection at the unit. Opening the wiring tray on top of the unit and be cautious of high voltage connections. Disconnect the blue wires labeled 9 & 10 from the field wiring to the door switch or make sure they are not tied together. There is no danger of getting shocked because the signal is 5 volt dc. Be sure not to touch the blue wires to anything metal (or grounded). The unit should shut off when it is in any mode that is activated by the door switch.
5.) If the air curtain is heated, make sure that the thermostat isn't wired to the door switch leads. Door switch leads are blue and labeled 9 & 10.

INTELLISWITCH® FAQ's Continued (Frequently Asked Questions)

www.intelli-how2.com

Q. How can I check the door switch to be sure it's working?
A. The Intelliswitch® may be in the wrong mode, be mis-wired or have a faulty door switch.
1.) Test the wiring and controller function at the same time first. Locate the door switch and open its wiring compartment by removing the two screws holding on the back cover. There should be two wires connected to screws inside the switch. There is no danger of getting shocked because the signal is 5 volt dc. Be sure not to touch the wires to anything metal (or grounded). Either disconnect both wires from the screws (noting which screws the wires are under) and touch them together (with air curtain in "Auto" mode) or make a short jumper wire and touch the jumper to both screws at the same time to see if air curtain comes on. If it does, the controller and wiring work.
2.) If the wiring and unit pass the function test, the problem could be either misalignment or a faulty door switch. On a magnetic reed switch check for magnet alignment, for plunger/roller type switch, check contact engagement with door.
3.) If you have access to an electrical test meter, the door switch contacts can be tested for continuity when the door switch wires are disconnected from the unit.

Q. Why won't my heat shut off?
A. The Intelliswitch® may need adjusted, have been mis-wired or have a faulty thermostat.
1.) Heat is activated by one of two thermostat connections. To test the internal thermostat set the external thermostat to OFF. The settings of the unit mounted thermostat probe are accessed through the display. Press the down arrow until the Temp Set indicator lights up; check if the temperature setting and unit of measure are correct. Test to see if it shuts off by setting the thermostat temperature to OFF or lower than the room temperature.
2.) If an external thermostat is connected to the unit, there could be a short in the field connections or the thermostat leads may be mis-wired. To test the external thermostat set the internal thermostat to OFF. Disconnect the external thermostat connections at the unit. Open the wiring tray on top of the unit and be cautious of high voltage connections. Disconnect the orange wires labeled 6 & 7 from the field wiring to the thermostat or make sure they are not tied together. There is no danger of getting shocked because the signal is 5 volt dc. Be sure not to touch the orange wires to anything metal (or grounded). The heat should shut off when the wires are separated.
For more complex troubleshooting of either thermal cutouts or heater contactors, please consult a qualified electrician or the factory.

Q. Why didn't the Intelliswitch® save the changes I made to a program?
A. If a program is active (a dot is illuminated by one of the clock digits), changes can be made to any settings on the User Menu. These changes however will only remain in effect until the program changes to the next time zone. To make changes permanent, settings must be changed in the program from the Program Menu. Access the Program Menu by holding down the left arrow for 5 seconds until "PRO" is displayed. Arrow down to select programming and arrow left to select the program to edit. Use the down arrow to step through the options and make changes as desired. Continue to press the down arrow until Stor is displayed. Press OK or down to keep or store the changes.

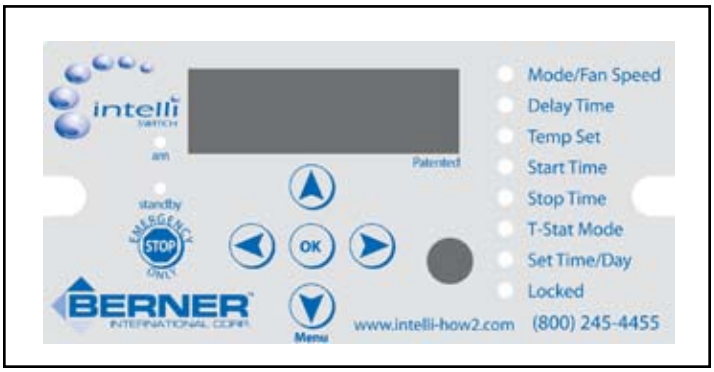
Q. How do I undo a change that I made to a program in the Program Menu?
A. Changes to programs cannot be undone. The programs can however be reset to the factory default settings. This must be done on the Factory Menu. Access to the Factory Menu is attained through the Diagnostics Menu. Press and hold the right arrow for 5 seconds until "DIAG" is displayed. From the "DIAG" display press and hold the up and down simultaneously for 10 seconds until "FACT" is displayed. Use the down arrow to select "DEFn" on the display then use the right arrow to select "DEFP". Press "OK" to reset. The control display will go blank then blink as confirmation.

Q. My air curtain won't turn on?
A. Check the AM/PM setting on the Start and Stop times or the clock (considering the AM indicator light whensetting values). Note: set the start time and stop time to the exact time for the unit to be active full time. Check to see if a program is active that may have different start/stop times than those expected.

Q. My building has a Building Management System, can the Intelliswitch® work with a BMS?
A. The Intelliswitch® can be controlled by a Building Management System (BMS) but currently does not have the ability to communicate with them. Dry contacts on the BMS may be used to control the unit activation through the door switch connections (blue wires 9 & 10) and the heat activation thought the remote thermostat connections (orange wires 6 & 7). Consult factory.

A. PROGRAMMING THE INTELLISWITCH®

To reduce the risk of injury and ensure proper operation all Notes and Instructions shall be read!



Note: The STOP button (STOP) is available at all times and immediately stops the unit for an emergency situation. The Intelliswitch® will display STBY for Stand By when selected. To release the control from STBY press STOP again. When the control is released from STOP it will be in the OFF Mode. Press the left or right arrows to select new Mode or OK to return to the clock.

Note: When changing options, if there is no activity for 15 seconds, the control will save changes and default back to the User Menu display clock.

Note: The OK button (OK) always saves the current entered value and returns you to the User Menu display clock.

Section 1: Quick Start Reference
Section 2: Arrow Navigation
Section 3: Menu Structure
Section 4: User Menu
Section 5: Program Menu
Section 6: Diagnostic Menu
Section 7: Factory Menu
Section 8: External Connections

1. Quick Start Reference

1.1 Press the Menu button (down Arrow).
1.2 Using the left and right arrows, select the operating Mode: Off, On, Auto, Deluxe, Comfort Plus or Program Number 1, 2 or 3.
1.3 Press OK.

2. Arrow Navigation

The up and down arrows (▲)(▼) select the menu options.

The left and right arrows (◀)(▶) change values for single-level menu options (Mode, Speed, Temp Degree, Temp Set, T-stat Mode and Day) or are used to enter into multi-level menu options (Delay Time, Temp Set, Start Time, Stop Time and Set Time).
Arrow sequence and available settings are illustrated under each option.

2.1. Single Level Options

Single level options can change values directly with the left and right arrows. No additional actions are necessary to access these option settings.

2.2. Multi-level Options

Multi-level options require additional actions to access an option's settings. The right or left arrow is required to enter into an option.

If the multi-level option has one value to edit it may be changed directly with the up or down arrow.

If the multi-level menu option has two values (such as a time value) the first option value flashes upon selection. Use the left or right arrow to select which value to change and then use the up and down arrows to change the option value. See the Menu Options section for the option increment i.e. hours/minutes, minutes/seconds.

To leave a multi-level option, use the left or right arrow to cycle through the option value until it stops flashing. The up or down arrow may now be used to navigate to the other options.

3. Menu Structure

The Intelliswitch® has four menus:

- User Menu (Section 4)
- Program Menu (Section 5)
- Diagnostic Menu (Section 6)
- Factory Menu (Section7)

The **User Menu** is the top level menu where values for each option is entered based on the Mode selected. Each option is identified by a green light when selected. The clock display is the default home position for the User Menu when OK is selected or there is no activity for 15 seconds.

Note: Access to all Secondary Menus must originate from the User Menu. Secondary menus are identified by the menu title upon successful entry, e.g. PRO, DIAG and FACT.

The **Program Menu** is used to edit all program option parameters.

The **Diagnostic Menu** is used to diagnose and troubleshoot errors with the Intelliswitch®.

The **Factory Menu** is only to be used when directed to reset or change factory default settings.

4. User Menu

To enter into the User Menu press the down arrow (menu). Use the down or up arrow to step through each option. Each option is identified by a green light when selected. Options available from the User Menu are:

- Mode
- Fan Speed
- Time Delay
- Thermostat degree type
- Thermostat Set Point
- Start Time
- Stop Time
- Thermostat Control Mode
- Time Set
- Day Set
- Lock/PASScode

4.1. Mode: single-level

↳OFF-ON-AUTO-DELU-PLUS-PRO1-PRO2-PRO3 ↰

Use left & right arrows to select the desired operating Mode.

- OFF – unit off.
- ON – unit will run when start/stop time is satisfied.
- AUTO – unit will run when terminals 9 & 10 are connected through a switch and start/stop time is satisfied, ALL menu options available.
- DELU – unit will run when terminals 9 & 10 are connected through a switch and start/stop time is satisfied, MUST set time delay from 1-10 minutes, T-Stat Mode NOT available.
- PLUS - unit will run when terminals 9 & 10 are connected through a switch and start/stop time is satisfied, when door is closed and temperature drops below the set point the unit will run on low speed with heat (low speed set on the Program Menu), unit will run at higher user level set speed when door opens.
- PRO1 – Runs Program #1 see Program Menu Section, 1st digit indicator light when active.
- PRO2 – Runs Program #2 see Program Menu Section, 2nd digit indicator light when active.
- PRO3 – Runs Program #3 see Program Menu Section, 3rd digit indicator light when active.

NOTE: When Program Modes are selected changes can only be made to the Mode, Time Delay, Temperature, Time and Day settings. Changes will only remain in effect until the program changes between active time zones.

NOTE: AutoLock, Comfort + Low Speed and PASSCode are global options and their settings are the same for any Mode selected. They will not change when the Mode or Program changes.

4.2. Fan Speed: single-level

SP ↳1-2-3↰

Use left or right arrows to select fan speed. Depending on the Air Curtain Series, the ranges will be either 1-10, 1-3 or 1-2 with 1 = low, and the highest number = high speed.

4.3. Delay Time: multi-level – min/sec

↳OFF – 00:01 thru 10:00 ↰

Select option with right arrow, use up & down arrows to set the amount of time that the unit will delay shutting off after terminals 9 & 10 are opened.

4.4. Temp Set (units): single level

↳ °F – °C ↰

Use left & right arrows to select the temperature degree type, Fahrenheit or Celsius, for thermostat set point.

Note: This option is only available for heated units with a built-in thermostat.

4.5. Temp Set : single level

↳ OFF – 34°F thru 90°F ↰
or
↳ OFF – 1°C thru 32°C↰

Use left & right arrows to select the temperature set point when the heat is to be activated.

Note: This option is only available for heated units with a built-in thermostat.

4.6. Start Time: multi-level – hours/min

Select this option with right arrow, use up & down arrows to set the time that the unit is to turn on in the ON Mode or become active for AUTO, DELU and PLUS Modes.

Note: to turn off this feature the Start Time must be set equal to Stop Time (including am/pm).

4.7. Stop Time: multi-level – hours/min

Select this option with right arrow, use up & down arrows to set the time that the unit is to turn off in the ON Mode or become active for AUTO, DELU and PLUS Mode.

Note: to turn off this feature the Start Time must be set equal to Stop Time (including am/pm).

4.8. Thermostat Mode: single level

↳ HEAT-BOTH ↰

Select the control mode for the built-in and remote thermostats.

The **HEAT** mode only cycles the heater when there is a call for heat from either internal or external thermostats when the fan is running. The **BOTH** mode cycles both the fan and the heater on a call for heat from either internal or external thermostats.

Note: This option is only available for electric heated units with built-in thermostat or units with external remote mount thermostat connected between terminals 6 & 7.

4.9. Set Time: multi-level – hours/min

Select option with right arrow, use up & down arrows to set the clock. Note: time does not adjust for daylight savings time.

4.10. Set Day: single level

↳ DAY1-DAY2-DAY3-DAY4-DAY5-DAY6-DAY7 ↰

Use left & right arrows to select day of the week, where Sunday = DAY1, Monday = DAY2 etc. Used as reference by programs.

4.11. Lock/Unlock

The Intelliswitch® can be locked to prevent unauthorized tampering of the settings.

When locked, only the options on the User Level may be viewed. Only the Mode can be changed between OFF and the Mode that was active when it was locked, all other options may NOT be changed.

To lock or unlock, press and hold the left and right arrows simultaneously for 5 seconds, the Locked light will illuminate when locked.

If the PASScode option is ON, an attempt to unlock the control will display PASS and then a 0000 prompt to enter a four digit unlock code. Use the up & down arrows to change the numbers and the left & right arrows to move between positions.

Note: When the AutoLock option is set to ON in the Program Menu, the Intelliswitch® will automatically lock after 5 minutes without any activity. Default setting – OFF. See Section 5.2.

Note: When the PASScode option is set to ON in the Factory Menu, the Intelliswitch® will require a code be entered to unlock the control. Default setting – OFF. See Section 7.4.

5. Program Menu

To enter into the Program Menu hold down the left arrow for 5 seconds. PRO will display when the Program Menu is available.

Use the Program Menu to set the following options:

- Program 1, 2 & 3 settings
- AutoLock setting
- Comfort Plus low speed setting
- Master/Slave Stand By setting

↳ PRO-AULC-PLUS-STBY↰

Program Menu – single level

Use left & right arrows to select the option to change.

5.1. Program

The Intelliswitch® can store up to three Dual-Zone programs.

Use the Program option to select and save User Menu settings to be recalled at anytime.

A time zone is the period of time defined by the user for the unit to be active. Both zones may operate one after the other or with a gap between them.

The Program menu allows parameters for the following options to be set:

- Number of Zones: 1 or 2
- Days of the week to operate per zone
- Mode (Off-On-Auto-Deluxe-Plus)
- Speed
- Time Delay
- Thermostat Set Point
- Start Time
- Stop Time
- Thermostat Mode

To enter into the Program menu press the down arrow (menu button) at the PRO display. Use the left & right arrows to select the program to be edited.

↳ PRO1-PRO2-PRO3 ↰

Note: After setting the number of zones and active days all parameters are set the same as the User Menu. Use the Up and Down arrows to accept changes and OK to return to User Menu.

5.1.1. Zone: single level

↳ Zn 01-Zn 02 ↰

Select the number of Zones for the program. If **one** zone is selected a prompt will ask to save settings after the last option. If **two** zones are selected, Zone 1 parameters will be set first and then parameters for Zone 2 will be set. A prompt will ask to save settings after the last option of Zone 2.

5.1.2. Day: multi-level

→ day-day1-day2-day3-day4-day5-day6-day7 →

Select the days of the week that the program is to operate for each zone.

When **day** is displayed, press the right arrow to enter into the day parameters.

Once in the day parameters each day is identified by the day number, use the right or left arrows to select **yes** to active a day or **no** to deactivate a day.

↳ dy 1n-dy 1y↰
↓
↳ dy 2n-dy 2y ↰
↓
↳ dy 3n-dy 3y ↰

Use the up and down arrows to move to the next day or skip days until **day** is displayed.

From this point enter right to re-enter day settings or down to continue.

Note: The top seven LED's will light from the top down representing days 1 thru 7 that have been activated.

5.1.3. Mode: single level ◄►

Select operating mode for Zone. Only Off, On, Auto or Plus are available.

5.1.4. Fan Speed: single level ◄►

Select the fan speed for Zone being programmed.

5.1.5. Time Delay: multi-level ►▲▼

Set the time delay for Zone being programmed.

5.1.6. Temperature Set: single level ◄►

Set the temperature set point for internal thermostat for Zone being programmed. Degree type is based on degrees selected on the User Menu.

5.1.7. Start Time: multi-level ►▲▼

Set the start time for Zone program to activate including am/pm.

Note: Zone 1 has priority over Zone 2 and if conflicting times are entered Zone 1 will always activate and take precedence over Zone 2.

5.1.8. Stop Time: multi-level ►▲▼

Set the stop time for Zone program to activate including am/pm.

Note: Zone 1 has priority over Zone 2 and if conflicting times are entered Zone 1 will always activate and take precedence over Zone 2.

5.1.9. Thermostat Mode: single level ▲▼

Set thermostat mode for Zone.

5.1.10. Store: single level ►▲▼

↳ str y-str n ↰

Use the right or left arrows to select **yes** to save program or **no** to abandon changes.

A single zone program will prompt to save all options after the first set of parameters; a dual zone program will prompt to save after the second set of parameters.

Note: Upon saving, the LED on the digit light corresponding to the program number will blink.

5.2. AutoLock: multi-level ▼◄►

↳ ON-YES ↰

To enter into the AutoLock menu press the down arrow (menu button) at the **AULC** display. Use the left or right arrows to select **ON** to have control automatically lock if there is no activity for 5 minutes or **OFF** to deactivate.

5.3. Comfort Plus (fan speed): multi-level ▼◄►

SP ↳ 1-2-3 ↰ see Note*

To enter into the Comfort Plus low speed setting, press the down arrow (menu button) at the **PLUS** display. Use the left or right arrows to select the low fan speed for the unit when in the PLUS mode, when the door is closed and the thermostat set point is reached.

***Note: the speed range is limited to be equal to or less than that of the User Menu speed setting.**

5.4. Master/Slave Stand By: multi-level ▼◄►

↳ ind-ALL n ↰

To enter into the Master/Slave stand by setting press the down arrow at the **STBY** display. Use the left or right arrows to select the STOP button behavior when units are connected together in a Master/Slave configuration. Select "ind" or independent to stop only the unit where STOP is pressed. Select "ALL" to stop all connected units.

6. Diagnostic Menu

To enter into the Diagnostic Menu hold down the right arrow for 5 seconds. **DIAG** will display when the Diagnostic Menu is available.

The Diagnostic Menu is used to diagnose and troubleshoot Intelliswitch® errors. Only "live" parameter settings are displayed, there are no options to change.

The Diagnostic Menu displays the following parameters:

- Software version release
- Speed Range Setting
- Internal Thermostat reading – Celsius
- Internal Thermostat reading – Fahrenheit
- Motor rpm reading

- Supply Voltage Frequency
- Door Switch status
- External Thermostat status
- Heater Relay status
- Error Code 1 – Speed Sensor
- Error Code 2 – Line Frequency
- Error Code 3 – Power Issue
- Error Code 4 – Motor Off Fault

6.1. Software Release Version – Format: rX.XX
6.2. Fan Speed Range – rn XX (see Section 7.1)
6.3. Thermostat Probe – Pr XX (see Section 7.2)
6.4. Internal Thermostat – ºC (np = no probe)
6.5. Internal Thermostat – ºF (np = no probe)
6.6. Motor RPM – measured speed in rpm
6.7. Supply Voltage – measured frequency in Hz
6.8. Door Switch Status – 0=open, 1=closed
6.9. External T-stat Status – 0=open, 1=closed
6.10.Heater Relay Status – 0=open, 1=closed

6.11. Error Codes

The Intelliswitch® has six error codes, 1 through 6, to help troubleshooting. The status of 1-4 can be observed from the Diagnostic Menu. The format for displaying the error code is the "Er" descriptor and a two digit code. The first digit is the error number and the second digit is the status using international convention. 0 = inactive, 1 = on or active.

6.11.1. Error Code 1 – Speed Sensor
Er 10 – Prox Sensor or Speed feedback exists
Er 11 – **NO** Prox Sensor or Speed feedback
Solution – check to see if the proximity sensor (located next to the motor) is connected to the control board and check distance between tip and trigger bar is approximately 1/16 of an inch.

6.11.2. Error Code 2 – Line Frequency
Er 20 – power supply line frequency exists
Er 21 – undetermined supply line frequency
Solution – The Intelliswitch® automatically senses line frequency. In the event that it can not determine the proper line frequency, it will run at full speed and flash error. Manually set the line frequency in the FACT menu. See Section 7.5.

6.11.3. Error Code 3 – Zero Cross/Power Issues
Er 30 – clean power exists
Er 31 – poor power exists, electrical noise
Solution – When the control encounters "noise" in the electrical power supply it will run at full speed and flash error code. There are no internal changes available. Have the electrical system checked for problems.

6.11.4. Error Code 4 – Speed Feedback
Er 40 – proper motor and sensor operation
Er 41 – Motor off but receiving prox/speed sensor feedback
Solution – this is usually the result of a failing motor control component on board that cannot be serviced. A replacement board is required.

6.11.5. Error Code 5 – Corrupted Memory Setting
Er 51 – Status of this error is not available. It only appears when there has been an event that has corrupted the settings in memory. When corrupted settings are identified the control will reset all settings (except for Speed Range) back to Factory default values. Because some speed ranges are not compatible with all motors, the proper value cannot be automatically set and therefore requires user input. This is prompted by the scrolling "Set FACt SPEEd" on the display.
Solution – press the "OK" button. This will open the range setting identified by "rn". Select the correct speed range (see Section 7.1) based on the Series/Model. Press "OK" button.

6.11.6. Error Code 6 – Incompatible Speed Range for Master/Slave Operation
Er 61 – Status of this error is not available. It only appears when unit are connected in a Master/Slave configuration that do not have identical Speed Range settings.

If two units are connected without equivalent speed ranges, every time a button is pressed on the Master unit (the unit used to make setting selections) the Slave unit will display an "Er 61" and the Slave will ignore the command to protect the control from damaging the motor.

Solution – Enter the Factory Menu to select the proper Speed Range (See Sections 7 and 7.1)

Note: This error does not monitor if the correct speed range has been selected for a Series/Model. Only that two or more units have been connected that do not have equivalent speed ranges.

Note: Once the correct speed ranges are selected and the controls accept commands from one another, the controls should be synchronized by simply cycling through all of the settings on the User Menu using the up or down arrows. None of the settings need to be changed.

7. Factory Menu – Service Personnel Only

The Factory Menu must be entered from the DIAG header. To enter into the Factory Menu hold down the right arrow for 5 seconds. DIAG will display when the Diagnostic Menu is available. From the DIAG display, press and hold the up and down arrows simultaneously for 5 seconds. FACT will display when the Factory Menu is available.

Note: When the Factory Menu is accessed it automatically shut the unit off by changing the Mode to OFF.

The Factory Menu is used to change or reset core settings to change base functions or resolve Intelliswitch® errors.

The Factory menu allows parameters for the following options to be set:

- Speed Range Setting
- Restore Factory Default Settings
- Reboot Software
- PASScode
- Supply Voltage Frequency

To enter into the Factory Menu from the header press the down

arrow. Use the left & right arrows to change setting values. Use the OK button select action and return to the User Menu.

7.1. Speed Range: single level

rn ↳ 0 – 1 – 2 – 3 – 4 – 5 – 6 – 7 –8 – 9 – 10 -11 – 99 ↰

Select the fan speed range from 0 to 11 using the left or right arrows. The speed range for each unit is located on the unit wiring diagram called out in a box in the Intelliswitch® schematic by "SPEED rn __".

Note: Selecting the incorrect speed range can damage the motor(s) beyond repair and potentially create abnormally high temperatures.

Speed ranges are dependent upon the Air Curtain Series, motor type and heat option.

ICA/FCA (1/2 hp) – 120, 208 or 240 voltages use range 8 or 9. 480 and 600 volts use ranges 6 or 7.
Motor Control Panel – only 120 volt, use range 3-4

Available ranges are:
0 = ambient – variable 3-speed, 600 rpm to full
1 = ambient – variable 3-speed, 1050 rpm to full
2 = heated – variable 3-speed, 1250 rpm to full
3 = ambient – full on, no adjustment
4 = heated – full on, no adjustment (monitored)
5 = heated – full on, no adjustment (not monitored)
6 = ambient – multiple 3-speed, ITC relay control
7 = heated – multiple 3-speed, ITC relay control
8 = ambient – variable 3-speed, 1250 rpm to full
9 = heated – variable 3-speed, 1250 to full
10 = ambient – multiple 2-speed, ITC relay control
11 = heated – multiple 2-speed, ITC relay control
99 = lock out – scrolling request for user input

7.2. Thermostat Probe Mode: single level

In **"St" (Standard) mode** the lowest operating point for the thermostat probe is 34°F (1°C). Below this temperature there will be no call for heat and "nP" (no Probe) will display on the diagnostics menu.
In **"Cd" (Cold) mode** the thermostat will operate below 34°F (1°C) but disables the "nP" (no Probe) feature and will call for heat on a probe failure or if it is disconnected.
St - Standard mode, locks out below 34°F (1°C). **Cd** - Cold mode, works below 34°F (1°C).

7.3. Restore Factory Default: single level

DEF ↳ n – U – P – A – t ↰

If it is necessary to restore any of the controls settings back to the factory defaults, select DEF using the down arrow. Select the factory setting restore type using the left or right arrows. This will reset the option settings back to the factory default settings. Available selections are:

DEFn – no changes
DEFU – reset User Menu ONLY settings
DEFP – reset Programs ONLY settings
DEFA – reset ALL settings (user and program)
DEFt – set controller to factory TEST parameters

7.4. Reboot Software: single level

↳ reb y – reb n ↰

If an error occurs that can be fixed by rebooting the control software, select **REB** using the down arrow. Select **YES** or **NO** to reboot the control.

7.5. PASScode multi-level

↳ PAS y – PAS n ↰

Select y to enable the PASScode feature and n to disable. When active, the PASScode feature requires that a four digit code be entered to unlock the control. The code is: 2376

7.6. Line Frequency: single level

↳ Fr Au – Fr 60 – Fr 50 ↰

The Intelliswitch® default is to automatically sense the line voltage frequency. If it cannot be determined automatically, the line frequency may be manually selected.

Au – Automatically Sense
60 – 60 Hz power supply
50 – 50 Hz power supply

8. External Connections

There are three types of external connections available on the Intelliswitch®.

- Door Switch
- External Thermostat
- Serial Connection

8.1. Auto Mode Activation

When terminals 9 and 10 in the junction box are connected (closed), the Auto, Deluxe, Plus and Programmable Modes are activated. The Intelliswitch® uses a low 5 volt DC voltage signal to monitor contact closure.

8.1.1. Door Switch (limit switch)

The door or limit switch is used in conjunction with the Auto, Deluxe, Plus and Programmable Modes to signal that the door is open. Connect door or limit switch to terminals 9 and 10 in the unit junction box.

8.1.2. Building Management System

A building management system or dry contact closure can be used to activate the unit through the Auto, Deluxe, Plus and Programmable Modes. Connect applicable contacts to terminals 9 and 10 in the unit junction box.

8.2. Heat Mode Activation

When terminals 6 and 7 in the junction box are connected (closed), the Heat Mode is activated for all Operating (On, Auto, Deluxe, Plus and Programmable) Modes. The Intelliswitch® uses a low 5 volt DC voltage signal to monitor contact closure.

If the internal thermostat is left on, the external heat mode will operate in parallel to contact closure, allowing either one to activate the heat. If the internal thermostat is turned off the external heat mode will activate independently to activate the heat.

8.2.1. External Thermostat

An external (remote) thermostat connection can be used to sense temperature independent of the built-in thermostat. Connect thermostat to terminals 6 and 7 in the unit junction box.

8.2.2. Building Management System

A building management system or dry contact closure can be used to activate the Heat Mode for all Operating Modes. Connect applicable contacts to terminals 6 and 7 in the unit junction box.

8.3. Master/Slave Operation

For Master/Slave Operation a serial cable connection must be made between all Intelliswitch® controls of each unit to be linked.

Once units are linked all Menu settings made through any unit display or remote control will transfer to all other linked units.

Parameter changes made on any linked unit will update all other boards "live" upon menu selections.

9. Infra-red Remote Control

The handheld infra-red remote control buttons layout and operation are the same as that on the Intelliswitch® unit display (including multiple button presses) with one exception, the Lock Button.

There is no need for multi-button press and hold for lock/unlock activation. The Lock button will lock/unlock display in one press.

B. USER MENU DEFAULTS

NOTE: AutoLock, Comfort+ Low Speed and PASSCode are global options and their settings are the same for any Mode selected. They will not change when the Mode or Program changes.

User Menu Default Settings Restore for DEFu:

- Mode: OFF
- Fan Speed: 3
- Time Delay: 15 sec (00:15)
- Thermostat degree type: ºF
- Thermostat Set Point: 68
- Start Time: 8:00am
- Stop Time: 8:00am
- Thermostat Control Mode: HEAT
- Lock: unlocked
- AutoLock: OFF
- Comfort+ Low Speed: 3
- PASScode: n = OFF

NOTE: does not change Speed Range, Time or Day

C. PROGRAM DEFAULTS

Program Default Settings for Restore for DEFp:

Program #1
(recommended for unheated units):

- Number of Zones: 1
- Days of the week to operate per zone: 1 – 7 (all)
- Mode (Off-On-Auto-Deluxe-Plus): Deluxe
- Speed: 3
- Time Delay: 1 min (01:00)
- Thermostat degree type: ºF
- Thermostat Set Point: OFF
- Start Time: 8:00am
- Stop Time: 8:00am
- Thermostat Mode: HEAT

Program #2
(recommended for heated units):

- Number of Zones: 2
- Days of the week to operate per zone: 1 – 7 (all)
- Mode (Off-On-Auto-Deluxe-Plus):
  Zone 1 – Deluxe; Zone2 – Comfort+
- Speed: Zone 1 – 3; Zone 2 – 3
- Time Delay: Zone 1 – 1 min (01:00);
  Zone 2 – 30 sec (00 :30)
- Thermostat degree type: ºF
- Thermostat Set Point: Zone 1 – 68; Zone 2 – 62
- Start Time: Zone 1 – 8:00am; Zone 2 – 5:01pm
- Stop Time: Zone 1 – 5:00am; Zone 2 – 7:59am
- Thermostat Mode: HEAT

Program #3
(recommended for heated units):

- Number of Zones: 1
- Days of the week to operate per zone: 1 – 7 (all)
- Mode (Off-On-Auto-Deluxe-Plus): AUTO
- Speed: 3
- Time Delay: 30 sec (00:30)
- Thermostat degree type: ºF
- Thermostat Set Point: 60
- Start Time: 8:00am
- Stop Time: 8:00am
- Thermostat Mode: HEAT

TROUBLESHOOTING

SYMPTOMS	CAUSE	REMEDY
NO AIR	• Power supply line open (no power)	• Check power source, check method of control in ON position
	• Fuse blown/circuit breaker tripped	• Replace fuse(s)/reset breaker
	• Motor overload tripped	• Internally protected motor - should reset automatically after cool-down, if not, replace motor.
	• Failed switch	• Replace switch
	MOTOR RUNNING/FANS ARE NOT ROTATING	
	• Broken fan hub	• Replace fan
	• Shaft rotating inside fan	• Tighten set screws/tighten fan on shaft
	ELECTRICAL CONTROLS NOT FUNCTIONING WHEN DOOR IS OPEN	
	• Door limit switch not operating	• Repair or replace limit switch
MINIMUM AIR	• Air directional discharge vanes mis-adjusted	• Adjust vanes to proper position, see instructions
	• Inadequate intake clearance	• Move air curtain or remove obstruction
		• Provide adequate space for air curtain
	• Blower motor operates below speed	• Improper voltage
	• Fan rubbing against housing	• Free fan from housing
	• Fan wheels clogged with dirt	• Clean and vacuum fan wheels
	• Fan in backwards	• Check fans for blade curve toward discharge
NO SPEED ADJUSTMENT	• Speed sensor not detecting trigger rotation	• Adjust gap between sensor & trigger/ replace sensor
AIR IS NOT HITTING FLOOR	• Air stream too weak	• Adjust nozzle to proper position, adjust motor speed; see installation instructions
	• Air steam hits obstruction	• Remove obstruction or reposition air curtain (move out 3/8" for every 1" up from the door)
	• Negative pressure	• Relieve negative pressure by providing makeup air
UNEVEN AIR	• Shaft rotating inside fan	• Tighten set screws
	• One motor not operating	• Repair or replace motor
ELECTRICALLY HEATED MODELS		
NO HEAT	• Thermostat not set properly	• Change thermostat setting
	• Coils burned out due to lack of air	• Correct airflow problem; replace coils
	• Automatic reset thermal cutout failed in open position	• Replace automatic thermal cutout
	• Speed sensor not detecting trigger rotation	• Adjust gap between sensor and trigger
	• Without speed adjustment, failed speed sensor	• Replace speed sensor
MINIMAL HEAT	• Thermostat in wrong location - thermostat too close to discharge	• Move thermostat away from air stream
	• Improper voltage	• Supply proper voltage
	• Thermostat not set properly	• Change temperature setting
	• Speed sensor not detecting trigger rotation	• Adjust gap between sensor & trigger/replace sensor
EXCESSIVE HEAT	• Thermostat in wrong location	• Move the thermostat closer to air stream
	• Thermostat not set properly	• Change temperature setting
	• Insufficient air over coil	• Remove restriction on intake
	• Improper voltage	• Supply proper voltage
STEAM/HOT WATER HEATED UNITS		
EXCESSIVE HEAT	• Too high steam/hot water pressure	• Reduce steam pressure/hot water flow
	• Inadequate air flow, fins plugged up, dirty coils	• Clean intake and coils
MINIMAL HEAT	• Insufficient removal of condensation (steam)	• Increase trap size
	• Not enough steam pressure/water temperature too low	• Raise pressure for steam/increase water flow
	• Intake air below design temperature	• Increase steam pressure/increase water flow

WARRANTY

Berner International warrants all new equipment to be free of defects in workmanship and material for a period of five years (5 years) on unheated models and two years (2 years) on heated models from the original date of shipment, provided the equipment has been properly cared for, installed and operated in accordance with the limits specified on the nameplate and The Company's instructions.

The Company will correct by repair or replacement, at its option and expense, any proven defects in said apparatus, subject to the above conditions, provided that immediate written notice of such defects is given to The Company. The warranty does not include any labor incurred for the removal or installation of defective part(s). The Company reserves the right to inspect, or have inspected by a qualified representative, any apparatus at the place of installation before authorizing repair or replacement. Repair or replacement will be made F.O.B. factory with any applicable transportation charges to be borne by the customer. Merchandise not of The Company's manufacture supplied in piece, or in component assemblies, is not covered by the above warranty, but The Company will give the customer the benefit of any adjustment as made with the Manufacturer.

This warranty is void if the apparatus has been tampered with in any way or shows evidence of misuse.

The Company will not assume any expense or liability for repairs made outside its factory without proper written consent from its service manager, nor for any transportation charges on apparatus returned to the factory without written authorization by The Company.

Nothing in the above warranty provisions, however, shall impose any liability or obligation of any type, nature or description upon Berner International if Berner has not received payment in full for the apparatus in question.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HERE OF INCLUDING THE IMPLIED WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

LIMITATION OF DAMAGES

Notwithstanding anything to the contrary above, customer's exclusive remedy for any and all losses or damages resulting from the sale of The Company's equipment under this agreement, including but not limited to, any allegations of breach of warranty, breach of contract, negligence or strict liability, shall be limited, at The Company's option, to either the return of the purchase price or the replacement of the particular equipment for which a claim is made and proved. In no event shall The Company be liable for any special, consequential, incidental or indirect losses or damages from the sale of The Company's equipment under this agreement.

IX. AIRFLOW ADJUSTMENTS 5
X. MAINTENANCE AND CLEANING 6
XI. SERVICE 6

WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

A. Use this unit only in the manner intended by the manufacturer. If you have any questions, contact the manufacturer.
B. Before servicing or cleaning unit, switch power off at service panel and lock the service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.
C. Installation work and electrical wiring must be done by qualified person(s) in accordance with all applicable codes and standards, including fire-rated construction.
D. Sufficient air is needed for proper combustion and exhausting of gases through the flue (chimney) of fuel burning equipment to prevent back drafting. Follow the heating equipment manufacturer's guideline and safety standards such as those published by the National Fire Protection Association (NFPA), and the American Society for Heating, Refrigeration and Air Conditioning Engineers (ASHRAE), and local code authorities.
E. When cutting or drilling into wall or ceiling, do not damage electrical wiring and other hidden utilities.

I. UNCRATING

Carefully examine the carton(s) for damage before opening. If the carton is damaged, immediately notify shipping company. If the unit(s) were shipped on wooden skids, remove protective wood and banding straps securing the carton(s) to the skid. Open the carton(s) and remove all protective packaging. Immediately verify that the electrical rating nameplate located on the cover matches electrical power supply available. Retain the shipping carton(s) until the unit(s) is installed and properly operating.

ACCESSORIES: If the unit(s) were ordered with optional electrical accessories (door switch, control panel, etc.), the accessories may be found in the carton containing the unit or in a separate carton(s) accompanying the unit(s). Check all of the cartons/skids for accessories before discarding.

II. MOUNTING INSTRUCTIONS

(General Notes for All Mounting Configurations)

INDOOR MOUNTING - Environmental/Insect/Dust Control

OUTDOOR MOUNTING (Unheated Only) - Insect/Dust Control

A. Berner VSA and VSB Series Air Doors are designed to be mounted by their end flanges without the need for intermediate support. Each end flange contains (8) total ½" holes located on all (4) sides to facilitate mounting flexibility and the easy addition of mounting accessories. Units may be attached to the wall directly, suspended from overhead, or supported by brackets. The style of door will determine the best mounting method and; as a general rule, use the mounting configuration that positions the air door as close to the top of the doorway as possible without interfering with door operation.

B. The VSA/VSB air door is designed to be an effective barrier against cold drafts in the winter and hot air in the summer. To achieve optimum protection, the unit should be mounted on the inside of the building, flush to the wall and as close to the top of the door opening as possible. To ensure peak performance keep the air stream free of obstructions. If the air door cannot be installed flush with the wall, be sure to seal the gap between the wall and the back of the Air Door along the entire length of the unit to prevent airflow through this void.

C. The air door will not perform properly if negative air pressure exists in the building. Under these conditions, a means for makeup air to the building must be provided so that the air pressure on both sides of the opening is in balance.

Model	Weight by Unit Type			
	Ambient	Electric Heat	Hydronic Heat	Indirect Gas Heat*
VSA1036	80	86	95	250
VSA1042	86	92	103	261
VSA1048	91	97	111	270

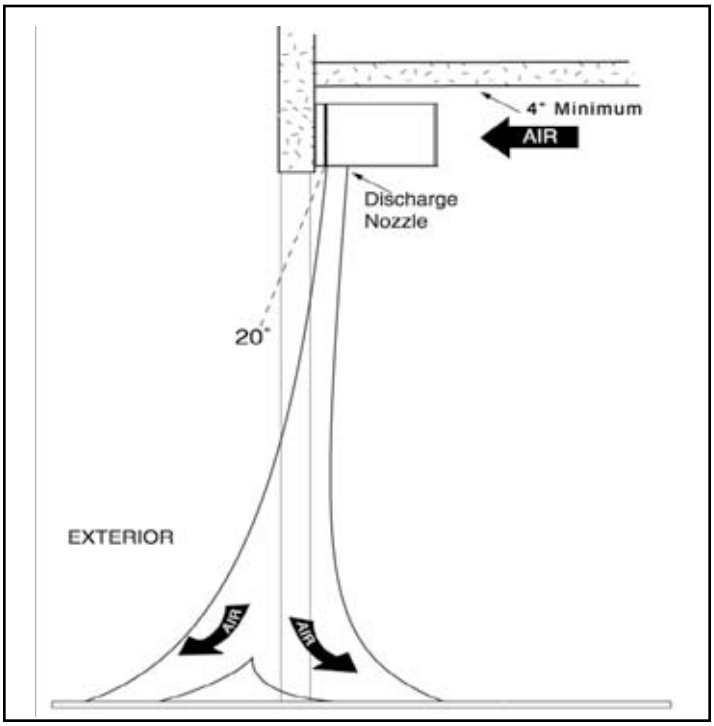
VSB4144	403	427	463	825

*Weight includes heater and duct transition

TABLE 2



DRAWING 1

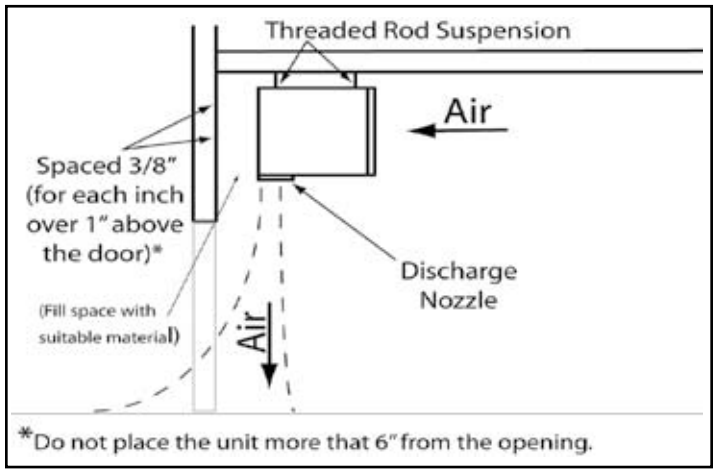
D. Before mounting the air door, check the supporting structure to verify that it has sufficient load-carrying capacity to support the weight of the unit(s). The mounting hardware (supplied by others) should be capable of supporting a minimum of three (3) times the weight of the unit. **See Tables 1 & 2.**

E. The air door is weatherproof. Therefore, no special covering is required when outdoor mounting, unheated, steam, or hot water units.

F. **IMPORTANT:** A minimum of 4" (8" preferred) is recommended above the top of the Air Door for the installation and removal of the screen or to gain access to junction boxes.

G. When determining the mounting location for the unit(s), make sure that nothing interferes with the curtain of air developed when the discharge vanes are directed from 0° to 20° toward the door opening. If the air stream strikes any obstruction (the top edge of the doorway, a door opening device, etc.), the effectiveness of the unit will be greatly reduced. **See Drawing 1.**

H. For optimum performance, the bottom of the unit (discharge nozzle) should be no more than 1" above the top of the door opening with the unit mounted flush to the wall. If the unit must be mounted higher, it must be **spaced out** from the wall **3/8" for every inch** the unit is above the door opening. **See Drawing 2.**



DRAWING 2

I. **Electric heated units shall:**

1. Have a minimum clearance of at least 1" between the sides and top of the unit and any combustible material.
2. Have a minimum clearance of at least 6' between the bottom of the unit and the floor.
3. Be installed indoors only.

J. **Proceed to one of the following sections, depending on application and door type:**

Section III: Wall Mounting

Section IV: Suspended Mounting

Section V: Vertical Mounting

Section VI: Tandem Mounting Brackets

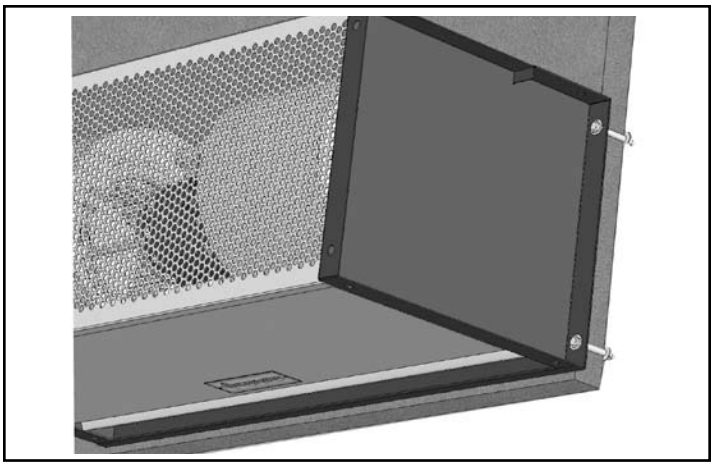


FIGURE 1 - Wall Mounting

III. WALL MOUNTING

A. Wall mounting works well with standard hinged doors or sliding doors.

B. The VSA/VSB series endplates are equipped with ½" holes for wall mounting. The unit may be attached to the wall using, at minimum, 3/8" bolts through the holes on the back of the endplate. **See Figure 1**. Or, the unit may be attached using an optional wall mounting bracket or a combination of extension and wall mounting brackets (available from Berner) attached to the holes on the top of the endplate and the wall. **See Figure 2**.

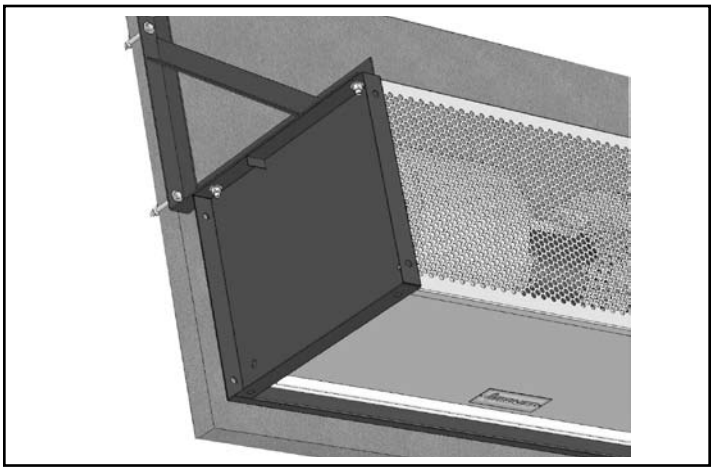

FIGURE 2 - Wall Mounting Bracket

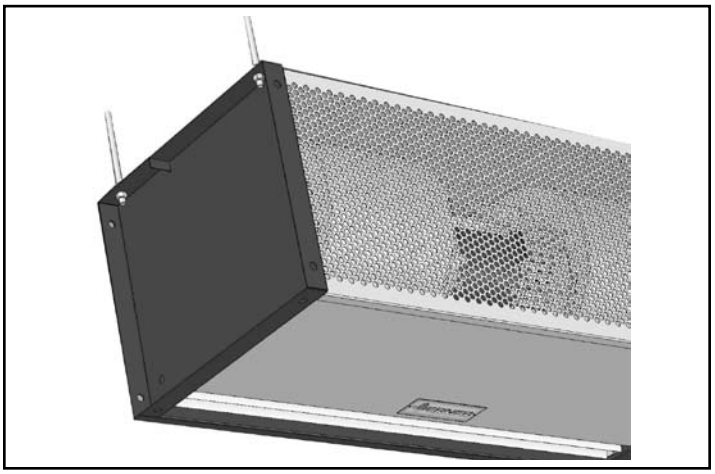

FIGURE 3 - Threaded Rod Suspension

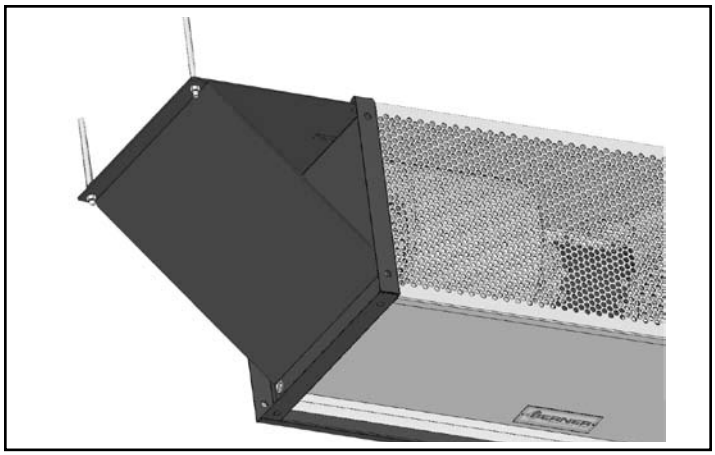

FIGURE 4 - With Extension Brackets

C. **Electrical Connections -** Proceed to **Section VII.**

IV. SUSPENDED MOUNTING

A. Suspended mounting works well with the majority of door types commonly found in an industrial setting, such as roll up doors, "high rise" track doors, "low-rise" turn back doors, and "high-rise" turn back doors.

B. The VSA/VSB series endplates are equipped with ½" holes for suspended mounting. The unit may be suspended using a minimum ⅜" suspension rod **(Figure 3)**, or using ⅜" suspension rods and extension brackets (available from Berner). **See Figure 4.**

C. **Electrical Connections -** Proceed to **Section VII.**

V. VERTICAL MOUNTING

A. Vertical mounting works well when the opening is taller than it is wide, or when the door type prevents a typical "over-door" mounting position.

B. Optional Floor Mounting Brackets bolt to the unit endplate, and provide a rigid base to attach the unit to the floor. Two Brackets are required.

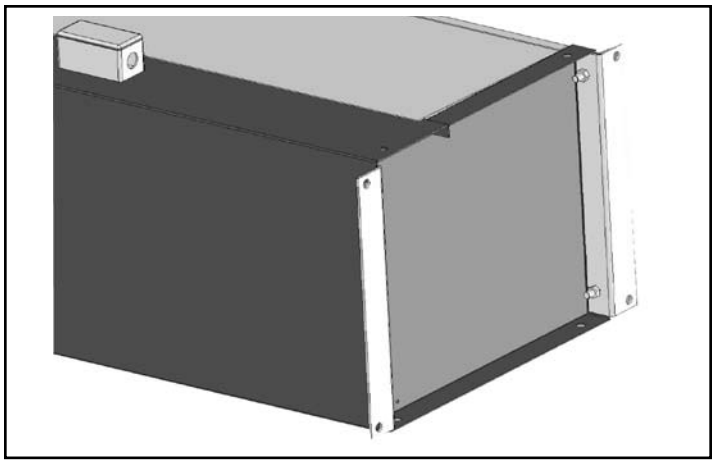

FIGURE 5 - Floor Mounting Brackets

C. To vertically mount a VSA/VSB unit using optional Floor Mounting Brackets, bolt brackets on the inside of the endplate with (4) ½ - 13 bolts as shown in **Figure 5**.

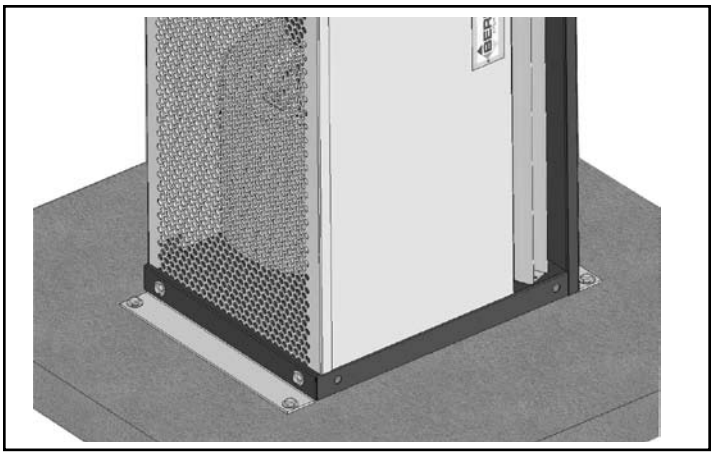

FIGURE 6 - Floor Mounting

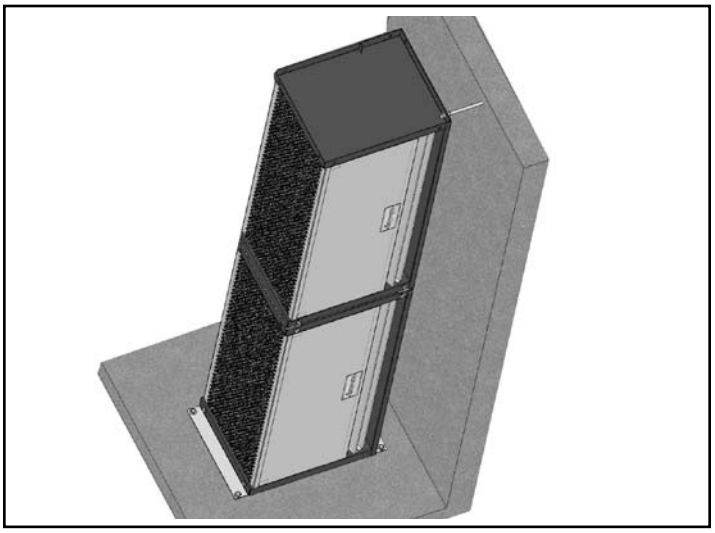

FIGURE 7 - Increased Stability

D. Position the unit vertically in its intended position and anchor it to the floor with a minimum ⅜" fastener. **See Figure 6**.

E. To improve the stability of the installation, it is required that the top of the unit be attached to the wall. A common approach is to attach a minumum length of ⅜" threaded rod through one of the open mounting holes in the top endplate and affix the other end of the rod to the wall. **See Figure 7**.

F. **Electrical Connections** - Proceed to **Section VII.**

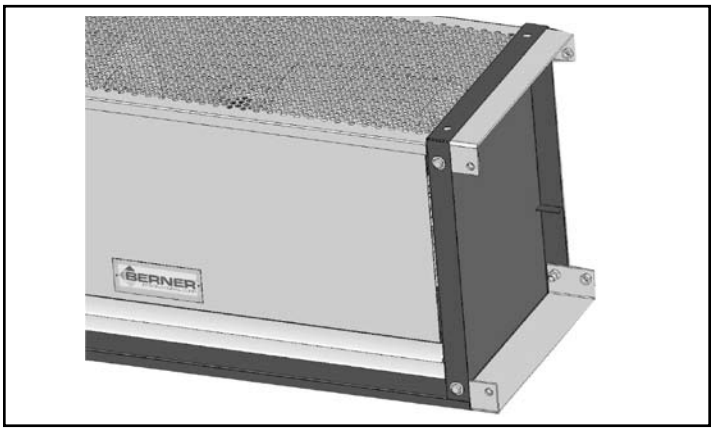

FIGURE 8 - Tandem Mounting

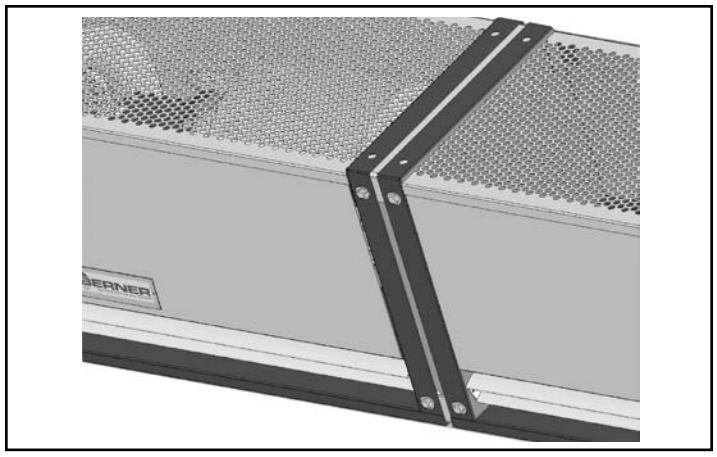

FIGURE 9 - Tandem Mounting

VI. TANDEM MOUNTING BRACKETS

(For Vertical Mount Installation)

A. Optional Tandem Mounting Brackets are used to join two air curtains together in a vertical application when the door height exceeds 12'.

B. Tandem Mounting Brackets connect the endplates of the units to be joined. Two brackets are required. Ideally, the units are joined together before the lower unit is bolted to the floor.

C. Using (4) ½ - 13 x 1" bolts, attach the Tandem Mounting Brackets to the inside of one of the unit's endplates as shown in **Figure 8**.

D. Slide the endplate of the next unit over the brackets installed in Step C and attach using (4) additional ½" bolts as shown in **Figure 9**.

E. Assemble Floor Mounting Brackets to lower unit and attach to floor per steps C and D of Section V.

F. **Electrical Connections -** Proceed to **Section VII.**

VII. ELECTRICAL CONNECTIONS

All electrical wiring and connections **MUST** be performed by qualified personnel in accordance with the National Electrical Code ANSI/NFPA No. 70 (latest edition) or, in Canada, the Canadian Electrical Code, Part 1-C.S.A. Standard C22.1 and local codes and regulations.

A. Check the rating nameplate on the top of the unit for supply voltage and current requirements. A separate line voltage supply with a suitable branch circuit protection device should be run directly from the main electrical panel to the unit. A disconnect switch for each branch circuit is a required part of this installation.

B. All field wiring must be copper with a minimum insulation of 60° C within approved conduit. If any of the wire supplied with the unit must be replaced, it must be replaced with copper wiring with a minimum insulation of 90° C.

C. Remove the Junction-Box cover.

D. Connect the power supply to the unit. Connect all supply and control circuit wires according to wiring diagram provided.

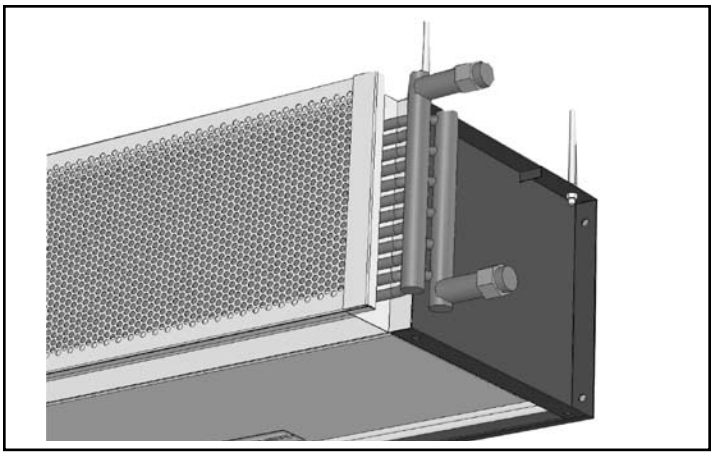

FIGURE 10 - Mechanical Connection - Steam/Hot Water

NOTE: For electric heated units provided with optional remote thermostat: Mount and wire the thermostat according to instructions and wiring diagram.

VIII. MECHANICAL CONNECTIONS

A. ELECTRICALLY HEATED MODELS

The heater circuit may be controlled by a remote thermostat or manually through the switch located on the discharge side of the unit. Overheating protection is provided by auto reset thermal cutouts built into the heater coil assembly **(see the wiring diagram)**.

B. STEAM OR HOT WATER HEATED MODELS

Piping should be done in accordance with local codes, regulations and standard practices. Connect the building system supply and return to the MNPT nipples on the heating coil. **See Figure 10.**

IX. AIR FLOW ADJUSTMENTS

A. With the air door operating and the door in its full open position, check to see that nothing is obstructing the airflow at the discharge nozzle vanes.

B. Find the air stream split location. Hold a handkerchief by its corners, approximately 12" above the floor. Gently move the handkerchief back and forth in the doorway. Make sure the air is being directed to both the inside and the outside. See Figure 11. The split location is indicated where the handkerchief is vertical with minimal or no fluttering.

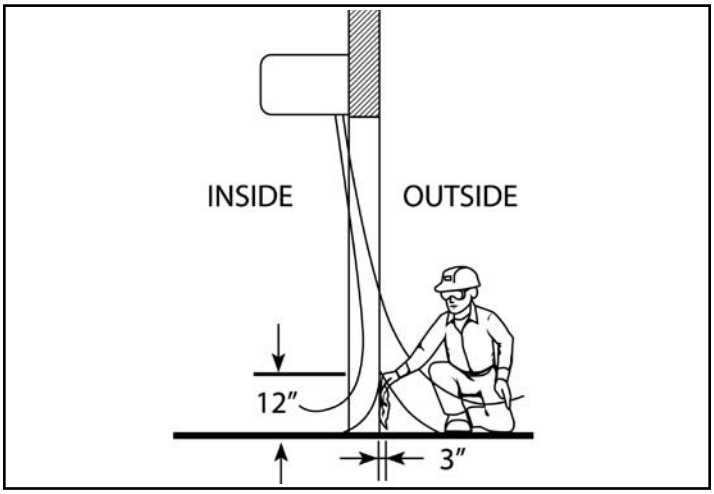

FIGURE 11 - Air Stream Split

C. Adjust the discharge nozzle vanes so the split location is approximately 3" outside the doorway. Adjust the speed controller so that the split location is approximately 12" above the floor.

X. MAINTENANCE AND CLEANING

CAUTION: ELECTRIC SHOCK HAZARD: Disconnect power when servicing unit. More than one disconnect may be required to de-energize unit.

Keep your air door operating at peak efficiency by cleaning the blower wheels, motor(s) and intake grille. Build up of dust on the blower wheels can cause vibration, noise and excessive wear on the motor bearings. The frequency of cleaning will depend on the environment where the unit is operating.

Dirty, dusty or greasy environments could require a cleaning schedule of once every two months. If the environment is not that dirty, the unit(s) should be scheduled for cleaning a minimum of once every (6) months.

To access the interior of the unit:

A. Disconnect the power to the unit and remove the intake grille by removing the screws on the top and bottom of the screen.

B. Remove the bottom access panel by removing the phillips head screws on the bottom of the unit.

C. Vacuum and scrape (if necessary) to remove the build up of dirt and debris. The motor(s) are permanently lubricated and require no additional lubrication. Reinstall the cover and intake grille.

D. Switch the power on after cleaning. **CAUTION: STAND CLEAR OF THE UNIT OR WEAR SAFETY GOGGLES AS LOOSE DEBRIS MAY BE PRESENT AND MAY EXIT THE NOZZLE**.

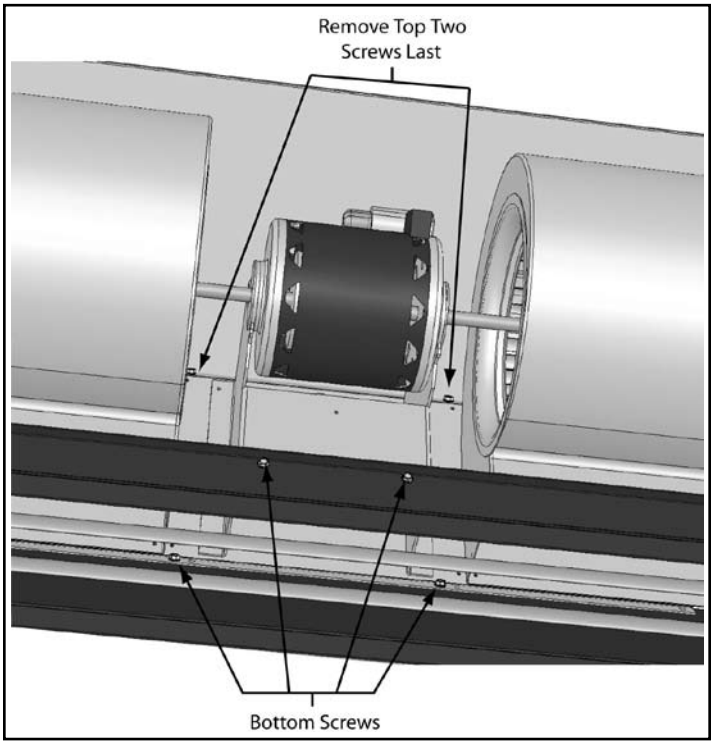

FIGURE 12 - Location of screws

XI. SERVICE

CAUTION: ELECTRIC SHOCK HAZARD: Disconnect power when servicing unit. More than one disconnect may be required to de-energize unit.

*Any service performed on the VSA/VSB series air door **MUST** be done by qualified personnel.*

Berner air doors require very little servicing. All parts are easily accessible for periodic inspection and maintenance. Units should be cleaned at least twice a year. Your particular application (the amount of dirt and dust in the air) and location of the unit(s) will determine how often your unit(s) will need to be cleaned and serviced. All motors have permanently lubricated, sealed, sleeve, or ball bearings and require no maintenance.

A. BLOWER MODULE REMOVAL

1. Disconnect and Lockout power to the unit.
2. Remove the bottom access panel by removing the phillips head screws on the bottom of the unit. The inlet screen does not have to be removed, but taking it off will make blower module removal easier.
3. Disconnect motor power wires/harness from motor.
4. If the unit has electric heat, there will be a series of insulated disconnects on the same side of the unit as the control panel. Disconnect them all.
5. Using a 5/16" socket on a 12" extension, loosen and remove the (6) self drilling screws from the blower plate and transverse. Remove the two screws at the top of the product last, as after they are removed, the module will be free to drop out of the cabinet. **See Figure 12** for location of all screws.
6. Rotate the module top forward and drop it down through the bottom of the unit. **See Figure 13.**

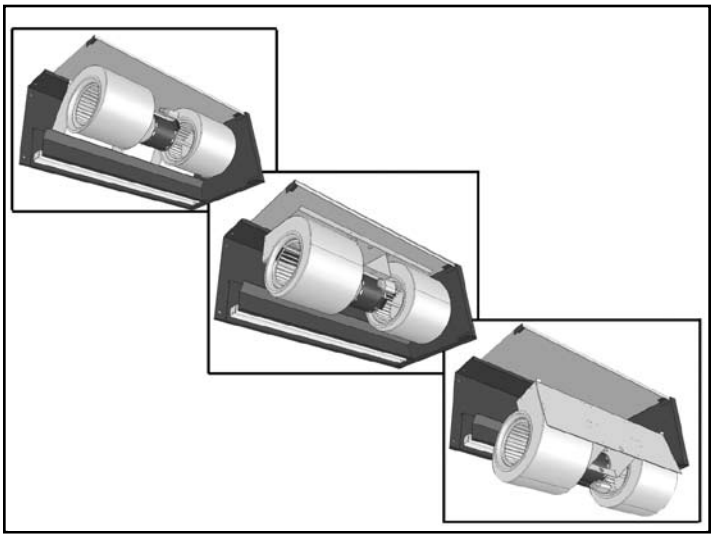

FIGURE 13 - Removing the Blower Module

7. To remove the motor, first loosen the set screws in the fan wheel hubs by using a 5/32" Allen wrench. The set screw can be accessed up through the fan's discharge or on the back of the blower housing.

8. Next, remove one of the two blower housings by removing the (4) screws from the blower plate and sliding it and its fan wheel off to the side.
9. Remove the motor clips from the motor mounts, lift the motor up and out of its cradle and slide it to the side. This should pull the motor shaft out of the remaining blower wheel.
10. Reinstall in reverse order of removal.

B. REPLACEMENT OF ELECTRIC HEATER ELEMENT

1. Electric Heater Elements are attached to the end of the blower housings. To access them, follow "Blower Module Removal" section above.
2. Detach the wire mesh heater guard
3. Disconnect the (4) power wires and (2) control wires per element.
4. Remove the (4) screws that hold the element to the blower housing. **See Figure 14** for location of screws and wire connections.
5. Install new element and connect all wires.
6. Reinstall Blower Module and connect all wires.

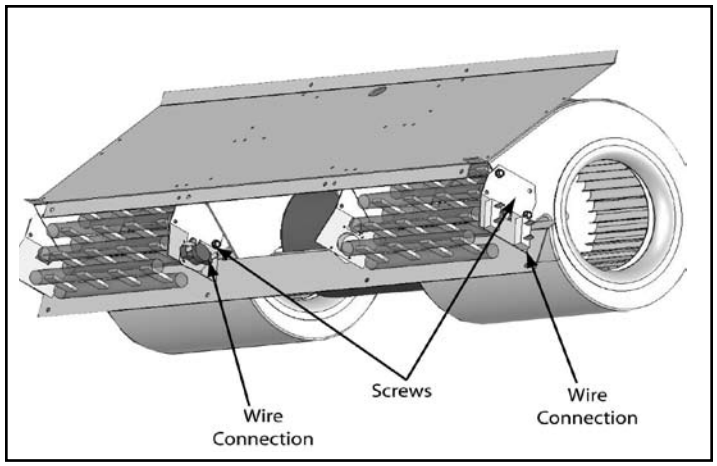

FIGURE 14 - Location of screws

WARRANTY

Berner International warrants all new equipment to be free of defects in workmanship and material for a period of five years (5 years) on unheated models and two years (2 years) on heated models from the original date of shipment, provided the equipment has been properly cared for, installed and operated in accordance with the limits specified on the nameplate and The Company's instructions.

The Company will correct by repair or replacement, at its option and expense, any proven defects in said apparatus, subject to the above conditions, provided that immediate written notice of such defects is given to The Company. The warranty does not include any labor incurred for the removal or installation of defective part(s). The Company reserves the right to inspect, or have inspected by a qualified representative, any apparatus at the place of installation before authorizing repair or replacement. Repair or replacement will be made F.O.B. factory with any applicable transportation charges to be borne by the customer. Merchandise not of The Company's manufacture supplied in piece, or in component assemblies, is not covered by the above warranty, but The Company will give the customer the benefit of any adjustment as made with the Manufacturer.

This warranty is void if the apparatus has been tampered with in any way or shows evidence of misuse.

The Company will not assume any expense or liability for repairs made outside its factory without proper written consent from its service manager, nor for any transportation charges on apparatus returned to the factory without written authorization by The Company.

Nothing in the above warranty provisions, however, shall impose any liability or obligation of any type, nature or description upon Berner International if Berner has not received payment in full for the apparatus in question.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HERE OF INCLUDING THE IMPLIED WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

LIMITATION OF DAMAGES

Notwithstanding anything to the contrary above, customer's exclusive remedy for any and all losses or damages resulting from the sale of The Company's equipment under this agreement, including but not limited to, any allegations of breach of warranty, breach of contract, negligence or strict liability, shall be limited, at The Company's option, to either the return of the purchase price or the replacement of the particular equipment for which a claim is made and proved. In no event shall The Company be liable for any special, consequential, incidental or indirect losses or damages from the sale of The Company's equipment under this agreement.

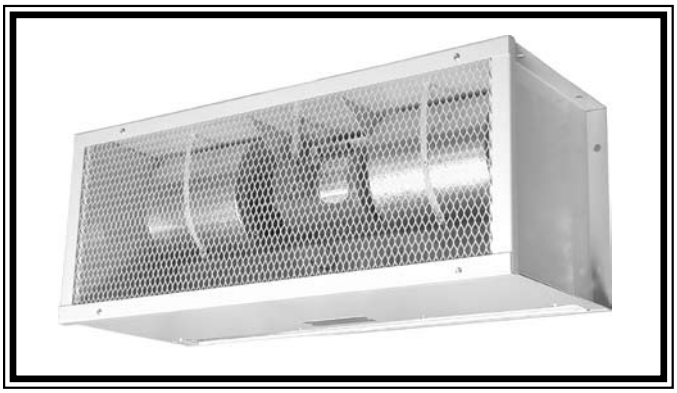
READ AND SAVE THESE INSTRUCTIONS

BERNER™ INTERNATIONAL CORP.

No.: II-112
Date: October, 2007

INDUSTRIAL MODELS:
CFA, CFC, CFX, CFY, EWD



Installation & Maintenance Instructions

WARNING: TO REDUCE THE RISK OF FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS, OBSERVE THE FOLLOWING:

A. Use this unit only in the manner intended by the manufacturer. If you have any questions, contact the manufacturer.
B. Before servicing or cleaning unit, switch power off at service panel and lock the service disconnecting means to prevent power from being switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device, such as a tag, to the service panel.
C. Installation work and electrical wiring must be done by qualified person(s) in accordance with all applicable codes and standards, including fire-rated construction.
D. Sufficient air is needed for proper combustion and exhausting of gases through the flue (chimney) of fuel burning equipment to prevent back drafting. Follow the heating equipment manufacturer's guideline and safety standards such as those published by the National Fire Protection Association (NFPA), and the American Society for Heating, Refrigeration and Air Conditioning Engineers (ASHRAE), and local code authorities.
E. When cutting or drilling into wall or ceiling, do not damage electrical wiring and other hidden utilities.

UNCRATING

Carefully examine the carton(s) for damage before opening. If the carton is damaged, immediately notify the shipping company. Remove the banding straps. Open the carton(s) and remove all protective packaging. If the unit(s) were shipped on wooden skids, remove all protective wood and all bolts securing the unit to the bottom of the skid. Retain the shipping carton(s) until the unit(s) are installed and properly operating.

ACCESSORIES: If the unit(s) were ordered with optional electrical accessories (door switch, control panel, etc.), the accessories may be found in the carton containing the unit or in a separate carton(s) accompanying the unit(s). **Check all of the cartons/skids for accessories before discarding.**

IMPORTANT: A minimum of 6" is required above the top of the unit to allow for wiring to motor junction box(es). This space is NOT required if the unit is supplied with a unit mounted control panel.

BERNER INTERNATIONAL CORPORATION
New Castle, Pennsylvania
724-658-3551 • 1-800-245-4455 • www.berner.com • airdoors@berner.com

Berner air curtains are designed to create an effective barrier against exterior elements: cold drafts in the winter, hot air in the summer, dust, dirt, debris and flying insects. For year-around protection, units should be mounted on the inside of the building and as close to the top of the door opening as possible or vertically mounted as close to the side of the opening as possible (vertical mount not suitable for gas heated units). Units installed on the outside of the building are to be used exclusively for protection against insects.

I. MOUNTING

A. Berner models are designed to be mounted by their end flanges, without the need for intermediate support. The unit may be attached to the wall, suspended from overhead or supported by brackets. The style of door will determine the best mounting method. **See Figures 1-6.** All hangers and supports are to be supplied by others. Air curtain(s) must be installed so that nothing will interfere with the air stream when it is deflected ± 20° to either side of the opening. If the air stream does strike an obstruction, its efficiency will be greatly reduced. Floor brackets are available for vertical mounting.

B. **IMPORTANT See Figures 1-6.** The unit should be mounted level with the top of the door opening or level with the side of the opening (for vertical mount). The outlet nozzle shall be located no more than 1" above the top/side of the opening. If the air curtain must be mounted higher, then it must be spaced out from the wall 3/8" for every inch the unit is above the opening (4.5" per foot). If the unit is mounted 6" or more away from the opening, side shields are recommended **See Figure 1.**

II. STEAM/HOT WATER HEATED MODELS

Piping should be done in accordance with local codes and regulations and standard practice. Condensate traps should be sized for three times the amount of condensate expected. All piping, traps and temperature controls are provided by others.

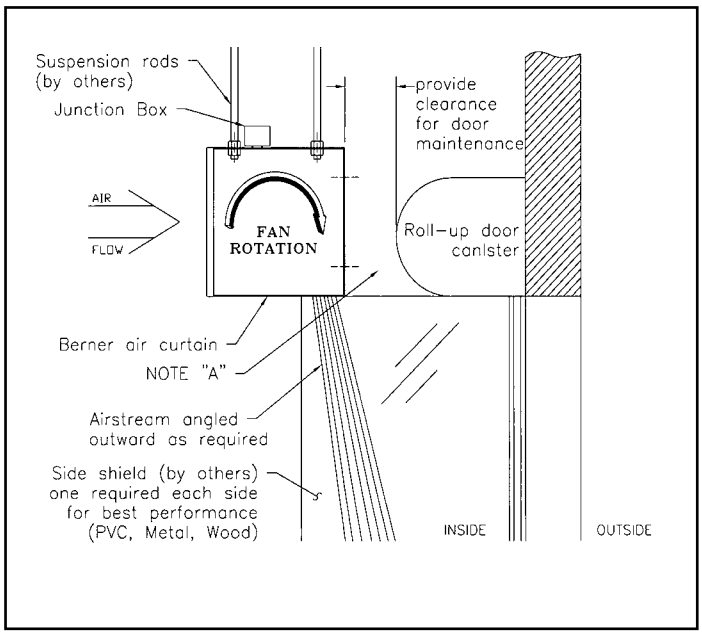


FIGURE 1 - Roll-Up Door

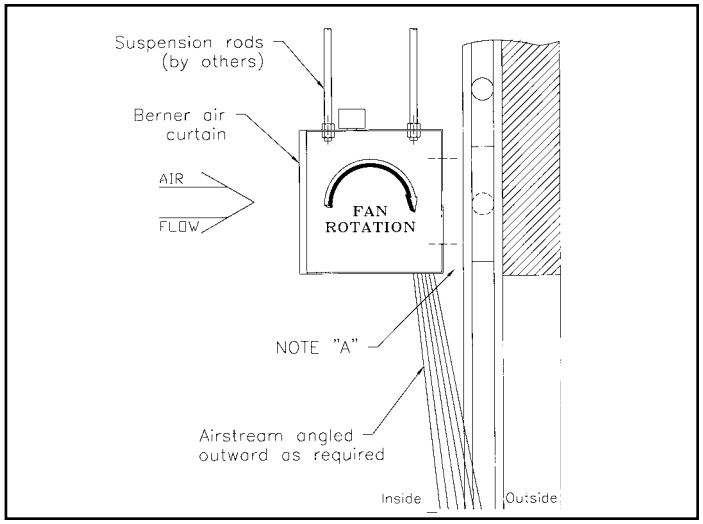

FIGURE 2 - High Rise Track Door

III. ELECTRIC WIRING

All electrical wiring should be done in accordance with: N.E.C., C.E.C., local codes and regulations. Each motor is internally wired to a junction box located on the outside of the unit (one for each motor), or to an optional motor control panel. Control panel wiring diagrams are located on the inside cover of the enclosure.

Make sure the correct voltage as marked on the unit is used. For amp rating, see the name plate located on each junction box or on the control panel.

IV. METHODS OF CONTROL

For convenience of operation, single phase air doors may be operated manually through an On/Off Switch or automatically through a door switch (activates the unit each time the door opens). Three phase units require a motor starter control panel which may also include an On/Off Switch, an Hand/Off/Automatic Switch, or an Automatic Door Switch (activates the unit each time the door opens, and deactivates the unit each time the door closes). The control panel may be unit mounted or remote mounted.

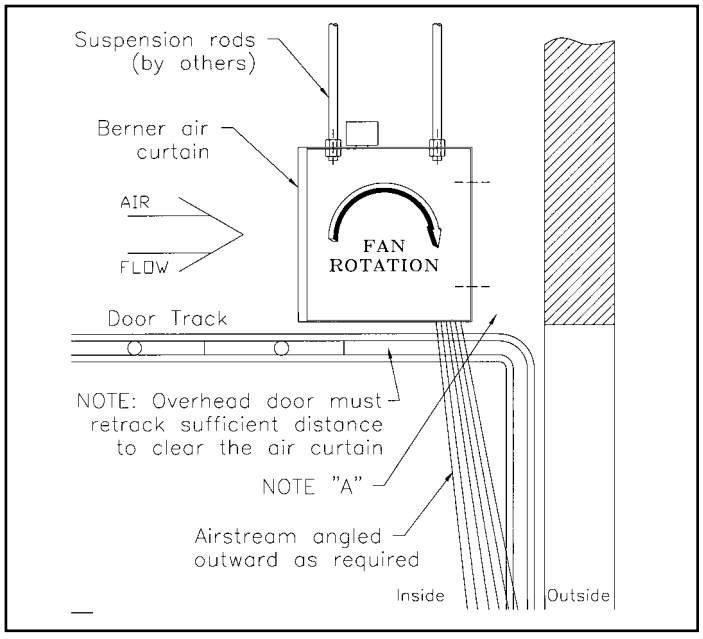

FIGURE 3 - Low "Turn-Back" Track Door

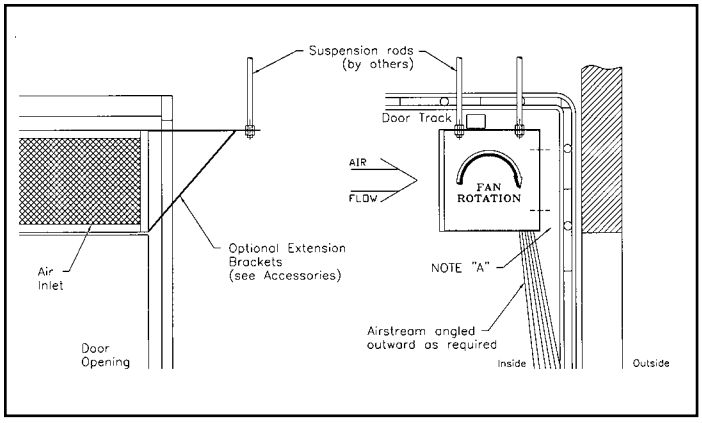

FIGURE 4 - High "Turn-Back" Track Door

V. INTERIOR MOUNTING

(Adjustment For Protecting Against The Weather)
(See Figure 7)

A. With the air curtain operating, and the door in its full open position, check to see that nothing is obstructing the air flow at the discharge nozzle.

B. Find the air stream "split" location. Hold a handkerchief, by its top corners, approximately 12" above the floor. Gently move the handkerchief back and forth in the doorway. Make sure the air is being directed to both the inside and the outside. The split location is indicated when the handkerchief is vertical with minimal flutter.

C. The split location should be approximately 3" outside the doorway. If the split location does not conform to the above specifications, the air directional vanes in the outlet nozzle should be adjusted.

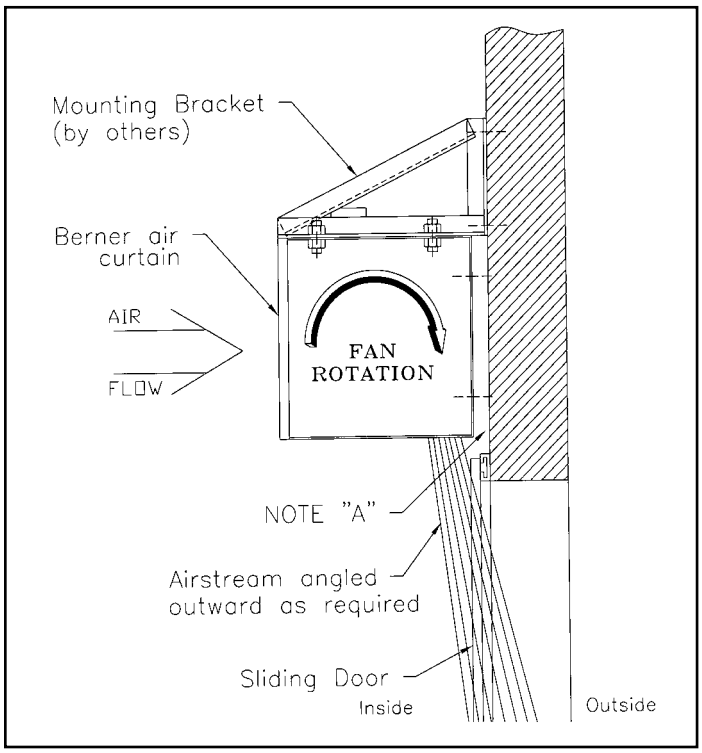

FIGURE 5 - Sliding Doors

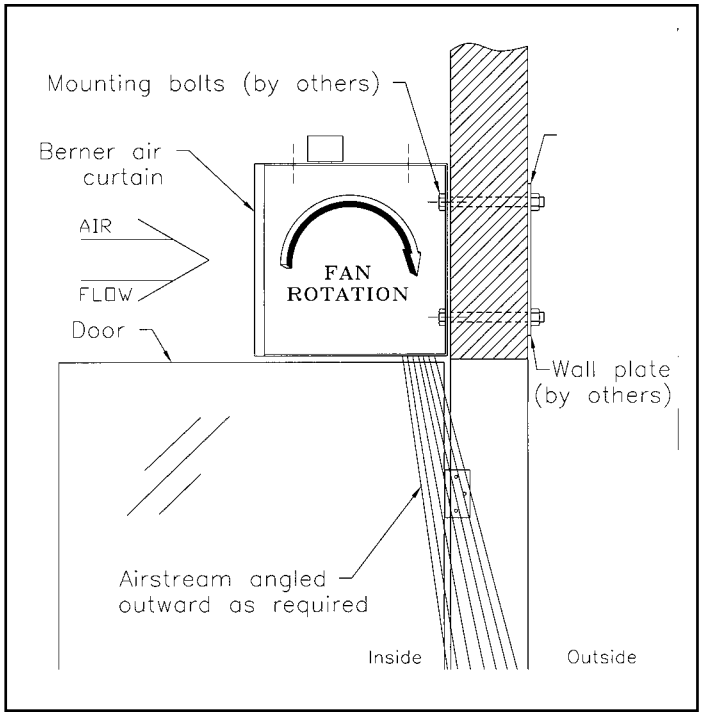

FIGURE 6 - Standard Hinged Door

VI. AIR DIRECTIONAL VANES

A. Loosen the two nuts on each end of the outlet nozzle(s).

B. Adjust the angle of the air stream by turning the vanes in the outlet nozzle until the split lies just outside the door threshold. **See Figure 7.**

C. After adjustment is complete, tighten the two nuts on each end of the outlet nozzle. Repeat as needed for units with more than one nozzle.

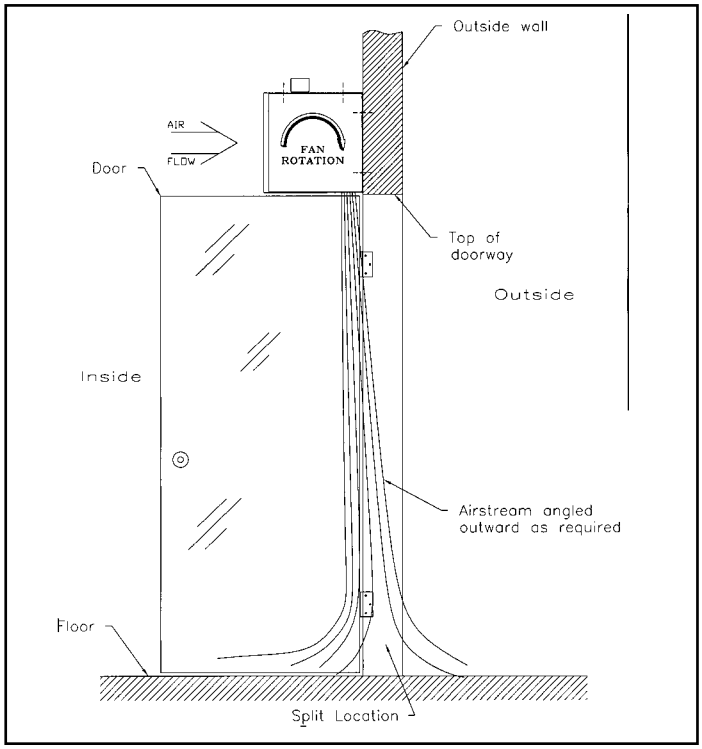

FIGURE 7 - Airstream Flow Pattern

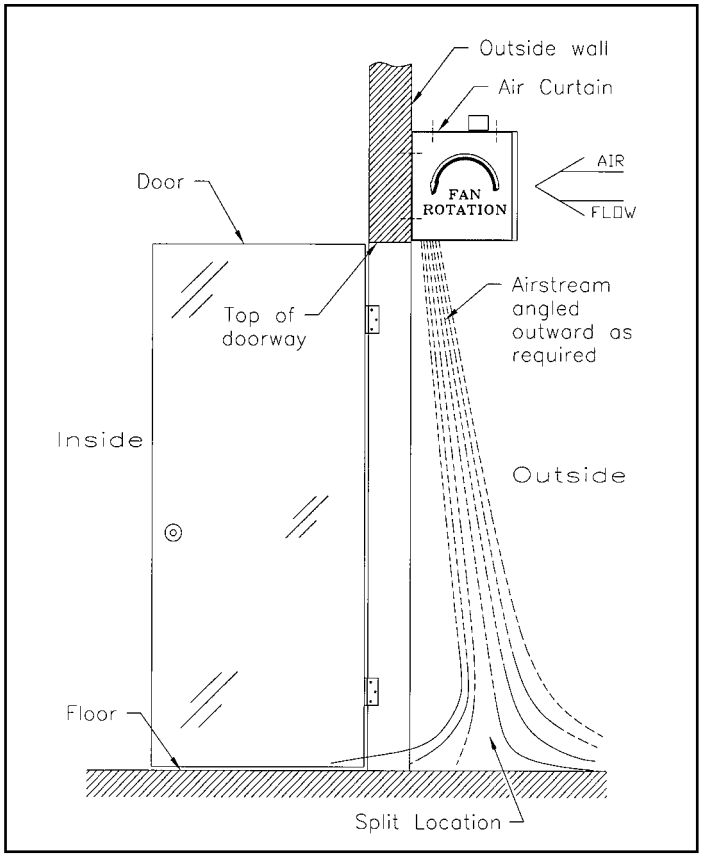

FIGURE 8 - Airstream Location (Exterior)

VII. EXTERIOR MOUNTING

(Adjustments For Protection Against Insects)
(See Figure 8)

Mount the air curtain following the INTERIOR MOUNTING Installation Instructions EXCEPT for air flow adjustment

VIII. AIR FLOW ADJUSTMENT

(For Exterior Insect Control)

Follow the AIR DIRECTIONAL VANES instructions. The split location should be located approximately 6" outside the doorway and approximately 12" above the floor.

NOTE: The in flowing airstream may feel cold, due to the "wind chill factor." The temperature of the moving air can be determined with a thermometer. If this apparent coolness is objectionable to personnel, a heater may be added to your unit.

IX. AIR CONTROL DAMPER

Industrial models are supplied with an air control damper. The air control damper will reduce the air volume supplied by the unit. The air flow may be reduced, if necessary, for light wind conditions. Do not damper the unit unnecessarily, since outside gusts of wind could break through the reduced curtain of air.

X. PREVENTIVE MAINTENANCE & SERVICE

CAUTION: ELECTRIC SHOCK HAZARD
Disconnect power line whenever working on unit. More than one disconnect switch may be required to de-energize the unit for servicing.

Berner air curtains require very little servicing. All parts are easily accessible for periodic inspection and maintenance.

A. FRONT ACCESS - Maintenance may be performed on ambient (unheated) models by removing the protective inlet screen.

B. BOTTOM ACCESS - Preventive maintenance may be performed on all models (heated and ambient) by removing the bottom access cover.

C. ACCESS PANELS: **INDIRECT GAS HEATED MODELS** Access may be accomplished through the access panels located in the transition duct, or through the bottom access cover of the air curtain.

XI. PREVENTIVE MAINTENANCE & CLEANING

Units should be cleaned and serviced at least twice a year. Your particular application and location (the amount of dirt and dust in the air) of the unit(s) will determine how often your unit(s) will need to be cleaned and serviced. Use an industrial vacuum or compressed air to remove dirt buildup from the inside of the cover housing, air inlet screen, blow wheels/housings, interior of the unit, and heating coils (if applicable).

All motors have permanently lubricated, sealed ball bearings.

TROUBLESHOOTING

SYMPTOMS	CAUSE	REMEDY
NO AIR	• Power supply line open (no power)	• Check power source, check method of control in ON position
	• Fuse blown/circuit breaker tripped	• Replace fuse(s)/reset breaker
	• Motor overload tripped	• Internally protected motor - should reset automatically after cool-down, if not, replace motor.
	• Failed switch	• Replace switch
	MOTOR RUNNING/FANS ARE NOT ROTATING	
	• Broken or damaged flexible hub	• Replace fan sleeve/re-engage coupling
	• Shaft rotating inside fan	• Tighten set screws/tighten fan on shaft
	ELECTRICAL CONTROLS NOT FUNCTIONING WHEN DOOR IS OPEN	
	• Selector switch is in off position	• Turn switch to “ON” position
	• Door limit switch not operating	• Repair or replace limit switch
MINIMUM AIR	• Air directional discharge vanes mis-adjusted	• Adjust vanes to proper position, see instructions
	• Inadequate intake clearance	• Move air curtain or remove obstruction
		• Provide adequate space for air curtain
	• Blower motor operates below speed	• Improper voltage
	• Fan rubbing against housing	• Free fan from housing
	• Fan wheels clogged with dirt	• Clean and vacuum fan wheels
	• Fan in backwards	• Check fans for blade curve toward discharge
AIR IS NOT HITTING FLOOR	• Air stream too weak	• Adjust nozzle to proper position, adjust motor speed; see installation instructions
	• Air steam hits obstruction	• Remove obstruction or reposition air curtain (move out 3/8” for every 1” up from the door)
	• Negative pressure	• Relieve negative pressure by providing makeup air
UNEVEN AIR	• Shaft rotating inside fan	• Tighten set screws/Replace fan
EXCESSIVE AIR MOVEMENT AT DOORWAY	• Nozzle not angled out far enough	• Adjust nozzle angle to outside
	• Air movement too cold	• Add auxiliary heat to overcome wind chill
	• Pushing air outside building	• Adjust discharge angle back into building
	SEE AIR IS NOT HITTING FLOOR SYMPTOMS	
	ELECTRICALLY HEATED MODELS	
NO HEAT	• Switch turned to “ON” position	• Replace switch or check wiring
	• Thermostat not set properly	• Change thermostat setting
	• Coils burned out due to lack of air	• Correct airflow problem; replace coils
	• Automatic reset thermal cutout failed in open position	• Replace automatic thermal cutout
	• Manual reset thermal cutout tripped	• Reset manual thermal cutout
MINIMAL HEAT	• Thermostat in wrong location - thermostat too close to discharge	• Move thermostat away from air stream
	• Improper voltage	• Supply proper voltage
	• Thermostat not set properly	• Change temperature setting
EXCESSIVE HEAT	• Thermostat in wrong location	• Move thermostat closer to air stream
	• Thermostat not set properly	• Change temperature setting
	• Insufficient air over coil	• Remove restriction on intake
	• Improper voltage	• Supply proper voltage
	STEAM/HOT WATER HEATED MODELS	
EXCESSIVE HEAT	• Too high stream/hot water pressure	• Reduce stream pressure/hot water flow
	• Inadequate air flow, fins plugged up, dirty coils	• Clean intake and coils
MINIMAL HEAT	• Insufficient removal of condensation (steam)	• Increase trap size
	• Not enough steam pressure/water temperature too low	• Raise pressure for steam/increase water flow
	• Intake air below design temperature	• Increase steam pressure/increase water flow

WARRANTY

Berner International warrants all new equipment to be free of defects in workmanship and material for a period of five years (5 years) from the original date of shipment, provided the equipment has been properly cared for, installed and operated in accordance with the limits specified on the nameplate and The Company's instructions.

The Company will correct by repair or replacement, at its option and expense, any proven defects in said apparatus, subject to the above conditions, provided that immediate written notice of such defects is given to the Company. The warranty does not include any labor incurred for the removal or installation of defective part(s). The Company reserves the right to inspect, or have inspected by a qualified representative, any apparatus at the place of installation before authorizing repair or replacement. Repair or replacement will be made F.O.B. factory with any applicable transportation charges to be borne by the customer. Merchandise not of the Company's manufacture supplied in piece, or in component assemblies, is not covered by the above warranty, but the Company will give the customer the benefit of any adjustment as made with the Manufacturer.

This warranty is void if the apparatus has been tampered with in any way or shows evidence of misuse.

The Company will not assume any expense or liability for repairs made outside its factory without proper written consent from its service manager, nor for any transportation charges on apparatus returned to the factory without written authorization by the Company.

Nothing in the above warranty provisions, however, shall impose any liability or obligation of any type, nature or description upon Berner International if Berner has not received payment in full for the apparatus in question.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF INCLUDING THE IMPLIED WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

LIMITATION OF DAMAGES

Notwithstanding anything to the contrary above, customer's exclusive remedy for any and all losses or damages resulting from the sale of The Company's equipment under this agreement, including but not limited to, any allegations of breach of warranty, breach of contract, negligence or strict liability, shall be limited, at The Company's option, to either the return of the purchase price or the replacement of the particular equipment for which a claim is made and proved. In no event shall The Company be liable for any special, consequential, incidental or indirect losses or damages from the sale of The Company's equipment under this agreement.

CFA/CFC Maintenance Instructions

CAUTION: Disconnect all power supplies prior to any service performed.
When properly installed according to our instructions, Berner Model CFA and CFC Air Curtains are easily serviced.

AMBIENT MODELS FOR MINOR REPAIRS

On ambient models, periodic inspection and minor maintenance can be performed by simply removing the inlet grill. This is done by first removing the sheet metal screws and then removing the entire screen, thus providing access to the internal parts.

Inspection or minor maintenance such as cleaning of the wheels or tightening any loose set screws can be made at this point.

HEATED MODELS OR MAJOR REPAIRS

For any major repair, or if the unit is equipped with auxiliary heat, i.e. steam/hot water, gas or electric, the lower section of the air curtain may need to be removed. The lower section contains the motors, couplings, wheels, bearings and drive shaft. (See Figure 1 on back). If optional access panels were supplied, maintenance may be performed by removing the necessary access panels.

Supply power must be disconnected prior to lowering this section. All factory wiring is attached to the lower section through a junction box, starter or control panel.

To remove the lower section, the unit must be firmly supported underneath by a forklift or other suitable equipment.

Remove the #12 self-drilling type screws located on the crossbar near the nozzle section (these screws are used to join the back of the top and bottom section of the unit to prevent vibration). Remove the six 3/8" bolts, (three on each end of the unit) that hold the bottom section of the unit to the top.

When steam/hot water, gas or electric is supplied, it is not necessary to disconnect any piping or electrical connection. The upper section, along with the auxiliary heater will remain intact during the lowering procedure. For all steam/hot water coils, you must remove all fasteners in the lower assembly only that secures the coil to the lower section.

After the bottom section is lowered and in a secure position, it is possible to clean the internals of the unit. The inaccessible areas can be cleaned by using compressed air.

The couplings should be checked for proper alignment. The rubber sleeves, which separate the two metal flanges of the coupling, should be examined for excessive wear and replaced, if necessary. All set screws should be checked for tightness.

The bearings that support the wheels are encased in a rubber cylindrical housing and are permanently lubricated with moisture resistant grease that is sufficient for the life of the bearing. Check that all bearing locking collars are still intact.

The motors, equipped with shielded bearings, have sufficient grease to last indefinitely under normal use. Where the motor is used constantly in dirty, wet or corrosive atmosphere, it is recommended to add one quarter (¼) ounce of grease per bearing at least once a year. Use a good quality, rust inhibited, polyurea based grease such as Chevron SRI or Shell Dolium R with a temperature range from -35°F to +350°F.

For heated units, it is recommended that while the bottom section of the unit is lowered, any excessive dust be blown from the heating coils.

After servicing, the bottom of the unit may be placed back into position, making sure that all bolts are reinserted, tightened securely and all self-drilling screws replaced at the nozzle section.

TITLE: BERNER
MODEL CFA/CFC AIR CURTAIN
FRONT INTAKE ASSEMBLY

BERNER INTERNATIONAL CORP.
NEW CASTLE,PA.

The BERNER FLYSTOP is suitable for mounting above the door opening on the outside of the building. Indoor mounting is available, but consideration should be given concerning sound levels. Sound level measured 10' from the unit in free field: 93 dBA.

The BERNER FLYSTOP, Series FS, is supplied with two (2) wall mounting brackets, adjusting rods, washers and nuts. (Control panel and automatic door switch are not included unless ordered separately.)

INSTALLATION

1. Attach the two (2) wall mounting brackets securely to the wall or suitable structure (bolts and installation hardware provided by others). Refer to detail of mounting brackets and air curtain dimensions for correct spacing and height of brackets.
   NOTE: The brackets should be installed to allow for the air discharge nozzle to be flush with the top of the door opening.
2. With the brackets securely fastened to the wall or suitable structure, attach the air curtain to the brackets. A pivot pin, located on each end of the air curtain plenum, should be installed in one of the two notches of the mounting brackets. Install the pivot pin on the notch nearest the wall for exterior mounted (outdoor) units and the notch away from the wall for interior mounted (indoor) units.
3. Attach the adjusting rod. The rod goes through the adjusting collar with a nut and washer on each side of the collar (do not tighten the nut at this time).
4. Electrical installation should be in accordance with local codes and regulations. Use a flexible connection of sufficient length to permit angle adjustments. Where applicable, wiring diagrams are located in the junction box(es) or in the control panel.
5. If your unit is supplied with an optional weatherhood(s) (one weatherhood per fan) install the weatherhood above each fan. Attach the weatherhood by lining up the pre-drilled holes in the (4) legs on the weatherhood with the threaded nuts on the top casing of the air curtain. Attach with the (4) bolts supplied by Berner.

ADJUSTMENT FOR PROTECTION AGAINST INSECTS

With the unit operating, find the air stream split location (See drawing on reverse side). Hold a handkerchief, by its corners, approximately one foot above the floor. The fluttering of the handkerchief will show the air flow pattern. Adjusting rods are used to vary this angle. To adjust for the correct nozzle angle of the air stream, the split location should be outside of the doorway. An angle between 15-20° to the outside is the most efficient for insect control. The nozzle adjustment applies to both interior and exterior mounting. Anchor the pivot pins on the brackets. Tighten the lock nuts on the pivot pins. When adjustment is complete, install packing between the plenum and the wall (Refer to the Installation Drawing.)

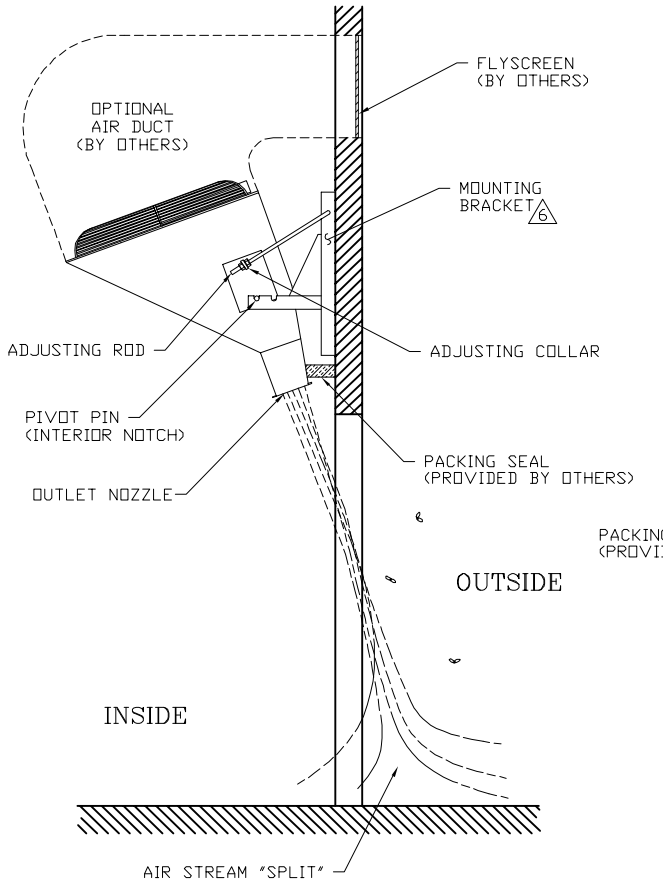
SERVICE & PREVENTIVE MAINTENANCE

CAUTION: Electric shock hazard - Disconnect the power whenever working on the unit. More than one disconnect switch may be required to de-energize the unit for servicing. Berner air curtains require very little servicing. However, all parts are easily accessible for periodic inspection and maintenance. **(WARNING:** VIBRATION, NOISE AND EXCESSIVE WEAR ON THE MOTOR BEARINGS ARE CAUSED BY DUST BUILDUP ON THE IMPELLER.)

1. To clean the interior of the unit:
   A. Disconnect the power to the unit.
   B. Remove the fastening screws from the inlet screen.
      NOTE: If a weatherhood is provided, remove the weatherhood prior to removing the inlet screen.
   C. Vacuum and scrape (if necessary) the impeller and the interior of the unit. The impeller and the motor may be removed if necessary.
2. Motor bearings are packed for a normal service life of 15,000 working hours. If a seasonal service motor is idle for six months, or more, it should be lubricated every year at the beginning of the season.
3. Mechanical fasteners should be checked occasionally, tighten if necessary.

FS INSTALLATION

INTERIOR MOUNTING



EXTERIOR MOUNTING

TITLE: BERNER
INSTALLATION OF MODEL FS
FLYSTOP SYSTEM

BERNER INTERNATIONAL CORP.
NEW CASTLE,PA.

CAREFULLY READ ALL DIRECTIONS BEFORE STARTING INSTALLATION.

1. Mount the air curtain according to the air curtain installation instructions provided for your model(s). Refer to air curtain Installation Instructions sheet No. II-112.

2. Mount the indirect gas-fired heater(s) according to the heater installation and operating instructions, and local codes. Individually support the heaters. Mount the heaters a minimum of 1" away from the duct transition opening. Support rods, brackets, etc. to be supplied by others.

3. Connect the flue pipe(s) (supplied by others) to the exhaust flange of the heater(s) per the heater installation and operation instructions, and local codes. All heaters have power venters, and the flue can be exhausted through the roof or through the walls. See furnace installation instructions chart for maximum flue lengths.

4. Connect the gas supply line(s) to the heater(s). Each heater is supplied with either a ½" or ¾" gas connection. This is not the supply line size. A larger main gas supply line may be required for multiple units. Refer to furnace installation instructions for maximum and minimum gas pressures.

5. All equipment should be wired by a qualified electrician. Connect the electrical power supply to the air curtain motor(s) per the wiring diagram, National Electrical code and local codes.

6. Check for proper fan rotation by turning on the air curtain. Three phase wiring only. Refer to the installation instructions, Form II-112, to determine the proper fan rotation. The fans are rotating in reverse rotation if they produce a weak, uneven air stream and excessive noise and vibration. Switch any two power supply leads to change the rotation.

7. Connect the electrical power to the heaters per the wiring diagram, the national Electrical Code, and local codes.

8. Turn on the controls to verify proper operation of the air curtain and the heater(s). Check the sequence of operation schedule provided to verify proper operation.

CAUTION: ELECTRIC SHOCK HAZARD. Disconnect power line whenever working on unit. More than one disconnect switch is required to de-energize the unit for servicing.

CAUTION: An excessive dirt buildup on fan wheels, that reduces the air performance of the air curtain, will result in heat exchanger failure.

CLEANING AND MAINTENANCE

Vibration, noise and excessive wear on the motor bearings are caused by dirt and dust buildup on the blower wheels. To clean the blower wheels, remove the fastening screws from the cover housing. Vacuum and scrape (if necessary) the blower wheels and the interior of the unit.

The frequencies of cleaning will vary depending on individual applications. Under normal conditions, the system will require semiannual cleaning.

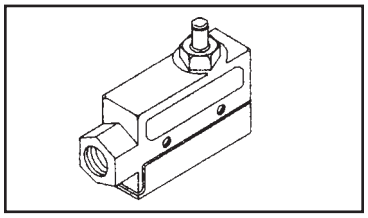
INSTALLATION DIMENSIONS FOR POSITIVE INDIRECT GAS FIRED - ALL MODELS

BERNER INTERNATIONAL CORP.
NEW CASTLE PA

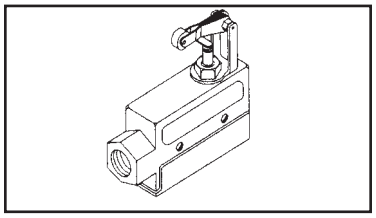
DOOR SWITCH
Installation Instructions

IMPORTANT: ONLY use the hardware provided to install the door switch. Larger screws will crack and break the internals of the door switch.

The door switch (plunger or roller type) is designed to automatically activate the air curtain each time the door is opened and deactivate the air curtain each time the door is closed. The automatic activation assures you of immediate protection each time the door is opened.



Plunger Type Door Switch



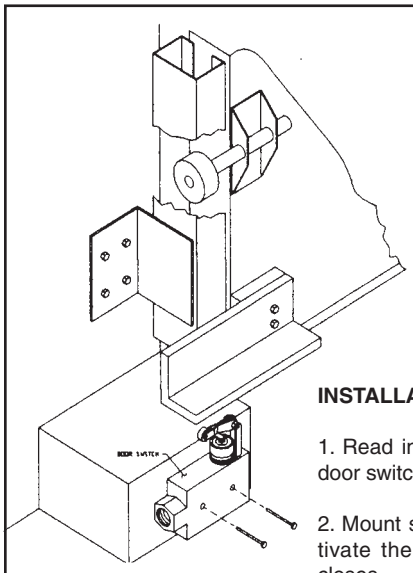
Roller Type Door Switch

The door switch may be located along the door track, or in the best position for contact with the door. A bracket (supplied by others) must be field fabricated to activate or deactivate the air curtain. The bracket will compress the plunger/roller of the door switch when it is closed.

The door switch can be wired in two positions. The most frequently used position is the **NORMALLY CLOSED & COMMON** with the door switch contacts in a closed position.

1. **NORMALLY CLOSED & COMMON:** When the door switch is wired between **NC** (normally closed) and **C** (common), the door switch is activated (compressed) and the contacts of the switch are opened. The open contacts in the door switch turn the power off, de-energizing the air curtain.

EXAMPLE: When the door opens, the plunger on the switch is released. This causes the contacts to return to their normally closed position, turning the power on to the air curtain.



INSTALLATION
DOOR SWITCH

INSTALLATION

1. Read instructions provided with the door switch prior to installing.

2. Mount so the door switch will deactivate the air curtain when the door closes.

3. Electrical connections to be flexible.

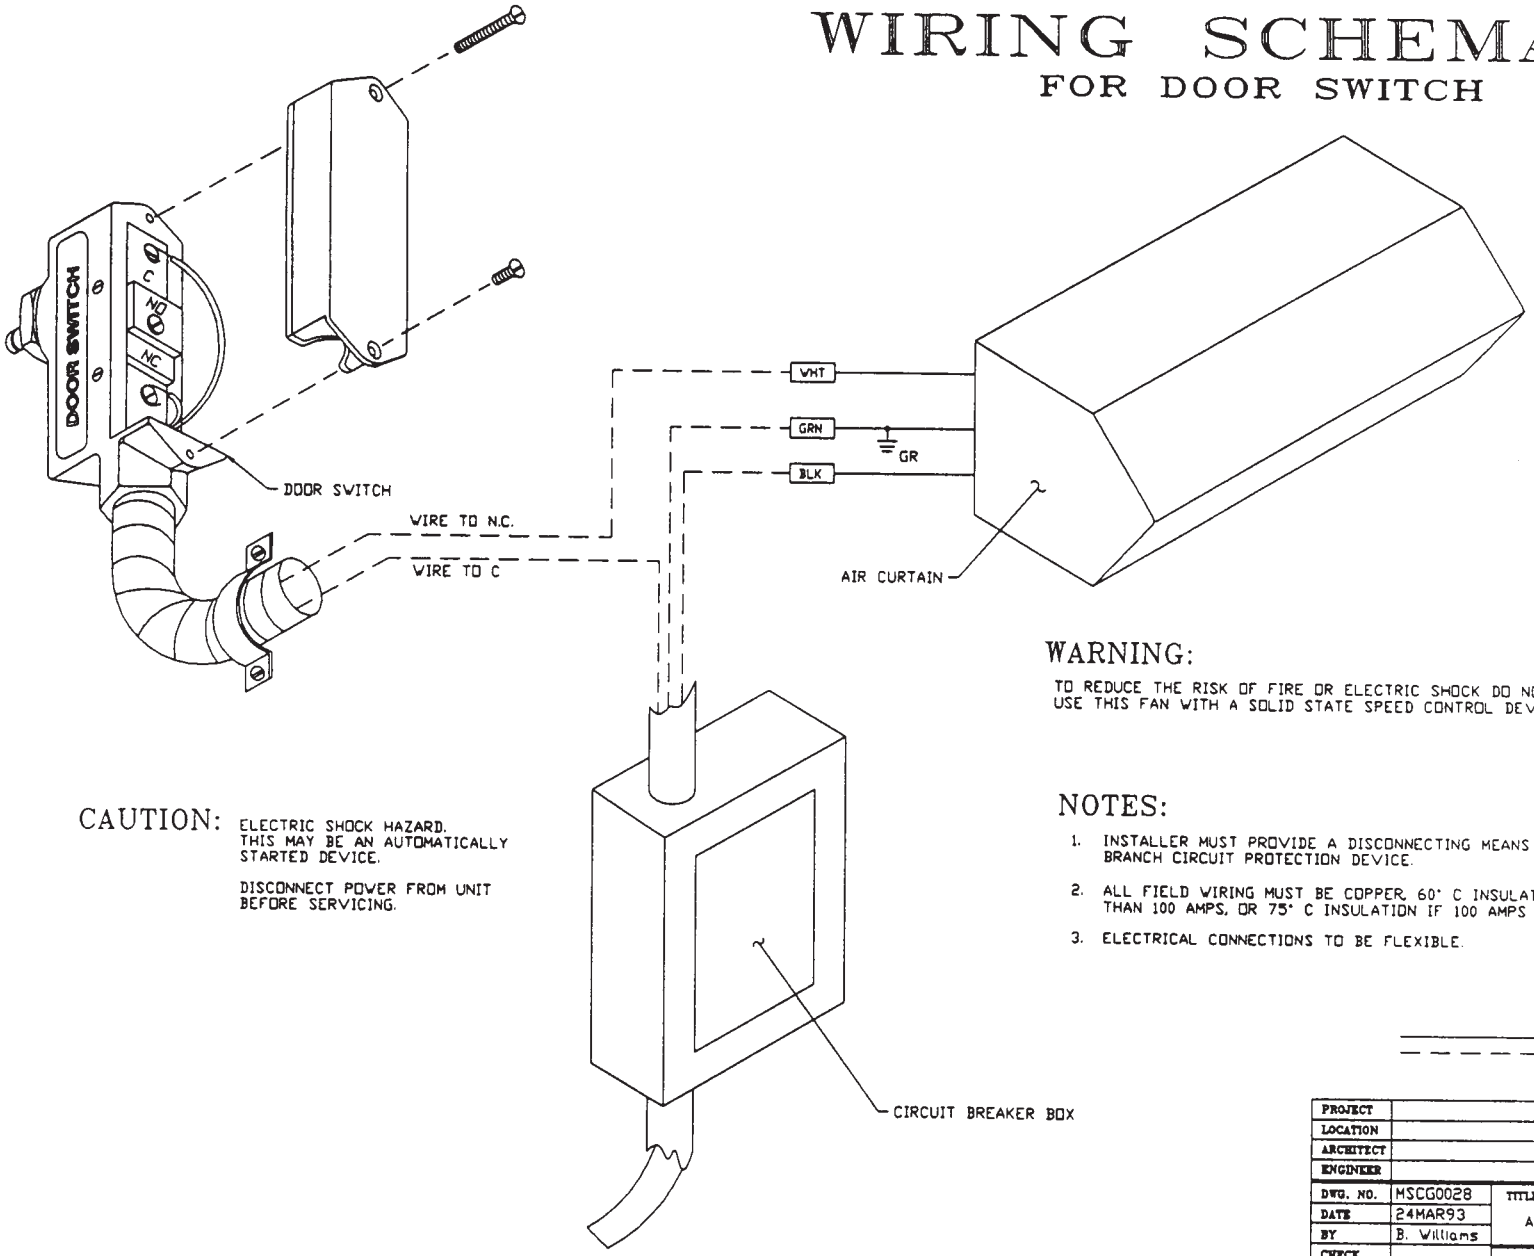
ROLLER TYPE DOOR SWITCH
INSTALLED ON A ROLL-UP DOOR

2. **NORMALLY OPEN & COMMON:** The door switch contacts are in an opened position. When the door switch plunger is actuated, the contacts of the switch are closed, turning the power on to the air curtain.

EXAMPLE: When the door opens enough to actuate the plunger on the door switch, the contacts of the switch are closed. This permits power through the circuit and activates the air curtain.

NOTE: The air curtain should turn off as stated above unless a timer is wired to the circuit.

WIRING SCHEMATIC
FOR DOOR SWITCH



CAUTION: ELECTRIC SHOCK HAZARD.
THIS MAY BE AN AUTOMATICALLY STARTED DEVICE.

DISCONNECT POWER FROM UNIT BEFORE SERVICING.

WARNING:

TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK DO NOT USE THIS FAN WITH A SOLID STATE SPEED CONTROL DEVICE.

NOTES:

1. INSTALLER MUST PROVIDE A DISCONNECTING MEANS AND A BRANCH CIRCUIT PROTECTION DEVICE.
2. ALL FIELD WIRING MUST BE COPPER, 60° C INSULATION IF LESS THAN 100 AMPS, OR 75° C INSULATION IF 100 AMPS OR MORE.
3. ELECTRICAL CONNECTIONS TO BE FLEXIBLE.

EXCLUSIVE DESIGN

AIR ENTRANCE SYSTEM

Provides a uniform air discharge and return across the entire system.
Produces highly efficient environmental separation.

Engineered to be integrated into the building's architecture.

Energy Efficient

90% of the discharge air is collected and recirculated.

Our Recirculating stream of air separates the indoor conditioned air from the outdoor unconditioned air - *while allowing you to keep your doors open.*

Ideal Applications:

- Retail
- Supermarkets
- Healthcare
- Casinos
- Public Facilities

BERNER™
INTERNATIONAL CORP.

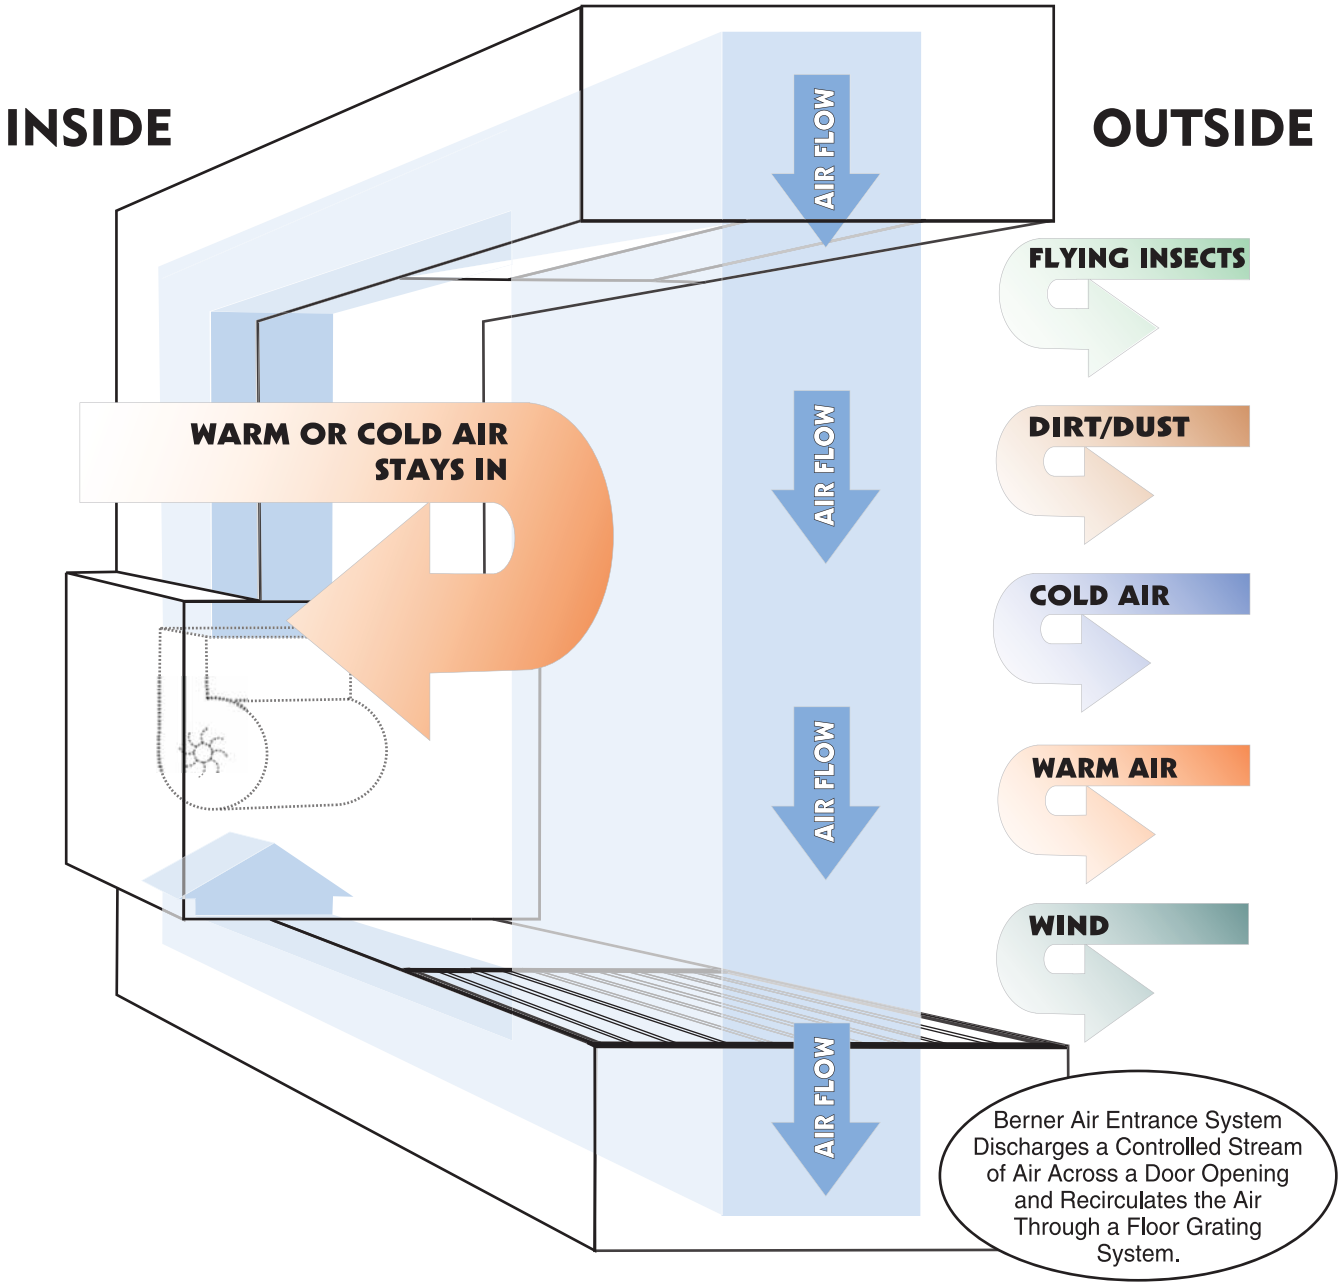
800-245-4455 www.berner.com

Saving Energy and Creating Healthy, Comfortable Environments.

Keep Your Doors Open

The free, unobstructed flow of traffic is an important factor in planning access to your facility. Berner International Corporation, a pioneer in the development and manufacture of air curtains, offers an aesthetically pleasing solution for high traffic entrance ways -The Berner Air Entrance System. This innovative entrance system provides a recirculated air seal, through concealed ductwork, effectively creating a barrier between indoor and outdoor temperature conditions. Open access, safety, and energy efficiency are created out of thin air with the Berner Air Entrance System-the only air entrance system backed by the engineering expertise of Berner International Corporation.

HOW AN AIR ENTRANCE SYSTEM WORKS



SAFETY FIRST

Increase customer safety, comfort, and convenience with an Air Entrance System from Berner International - the most trusted name in air curtain systems. Ideal for retail, supermarkets, health care, casinos and other public facilities, the Air Entrance System from Berner offers unsurpassed safety and reliability. Unlike a traditional air curtain, this system discharges a controlled stream of air from a concealed overhead plenum, which travels vertically across openings and enters a special floor grating system where it is cleaned and recirculated. The Air Entrance System from Berner can replace the need for conventional swinging or automatic doors to open and close during normal business hours, thus creating a barrier-free entrance that increases access and reduces liability.

ENERGY EFFICIENT

Today's building codes demand energy efficient entrance systems that maintain positive internal air pressure within tightly constructed buildings. The Air Entrance System from Berner is specially engineered to produce a stream of air that separates the indoor conditioned air from the outdoor uncontrolled air. Berner units are so efficient that as much as 90% of the discharge air is collected and recirculated.

AUTOMATIC CLEANING

As the fan draws air through the floor grill, fine mesh filters trap dirt and foreign particles before the air is recirculated. An automatic wash system removes any dirt drawn into the pit and filters. The Berner Air Entrance system is completely plumbed and requires only a standard connection to an existing water supply.

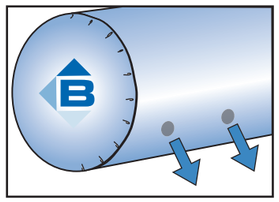
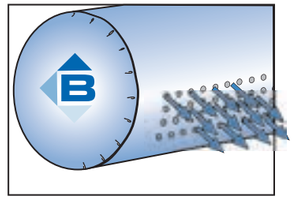
AIRFLOW PATTERN



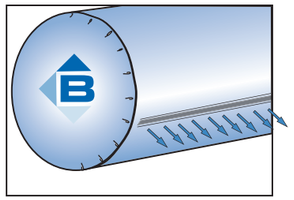
SUPER-FLOW

- Long throw air jets.
- Provide air circulation 30-40' beyond their profile.
- Propel warm ceiling air to cooler floor areas.
- For heated, cooled or untempered air.
- For 10' & above finished floor installation.



GENTLE-FLOW

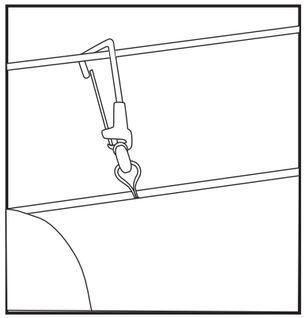
- Little noticeable movement.
- Provide air circulation 2-10' beyond their profile.
- Efficient at entrapping air.
- For heated, cooled or untempered air.
- For 8-14' above finished floor installation.



LINEAR DIFFUSERS

- Little noticeable movement.
- Provide air circulation 2-10' beyond their profile.
- Efficient at entrapping air.
- For heated, cooled or untempered air.
- For 8-14' above finished floor installation.

SUSPENSION

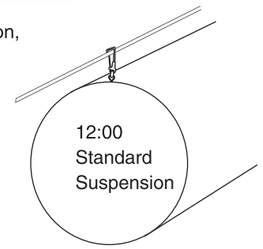


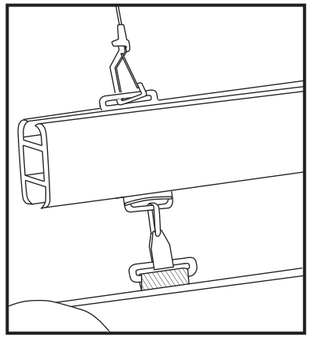
Snap Clip

Available in:

- Zinc plated
- Black powder coated
- Black plastic
- Stainless steel

Used with cable suspension, turn buckles and clamps.





HD Anodized Aluminum Rail

- Sleek new look
- Easy support cables
- Nice smooth bends

Saving Energy and Creating Healthy, Comfortable Environments

CP Series

Acrylic Coated Polyester

Versatile and aesthetically pleasing. Ideal for schools, sports arenas, supermarkets, swimming pools and retail stores. Water repellent, flame resistant and UV treated. Multiple colors available to complement surroundings.

FABRIC SPECIFICATIONS:

Construction:	300 Denier
Coating:	Acrylic Coated
Weight:	7 oz. per sq. yard
Melt Resistance:	350° F
Flame Resistance	California State Fire Marshal ASTM E84 Class A Material
Certification:	ICCES BOCA-94-08

Black 311 | Gray 312 | White 313 | Dk. Green 314 | Blue 315 | Tan 316 | Red 317

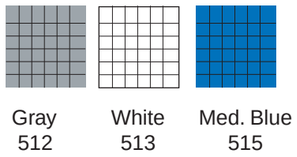
XS Series

Anti-Static Polyester

New anti-static fabric is ideal for static sensitive environments such as computer rooms or laboratories.

FABRIC SPECIFICATIONS:

Construction:	98% Polyester plus 2% Carbon
Weight:	3.2 oz. per sq. yard
Flame Retardant:	NFPA-701 small scale ASTM-84 Class A (Building Material)
Melt Resistance:	250° F
Air Permeability:	.49 (cc/cm^2/sec) ASTM D 737



Gray 512 | White 513 | Med. Blue 515

Air Flow Patterns:

SF Series

Silicone Coated Fiberglass

The SF Series is a coated fiberglass fabric that features a melt temperature of 500 degrees F.

FABRIC SPECIFICATIONS:

Construction:	100% fiberglass coated with silicone rubber
Weight:	17.3 oz. per sq. yard
Tear Strength (Tongue):	50 lbs. Warp, 25 lbs. Fill
Flame Retardant:	Zero flame, self extinguishing UL classified, (file R20672) ASTEM-84 Class A (Building Material)
Melt Resistance:	500° F

Low Cost Alternative To Heating Open Doorways

Berner's DIRECT GAS-FIRED DOOR HEATERS are the economical solution to heat loss problems where shipping and receiving doors are frequently opened and closed.

Ideal solution for facilities with negative pressure.

ACTIVATED THROUGH A LIMIT SWITCH
A high velocity stream of hot air heats the incoming cold air

MOUNTING VERSATILITY
Can be mounted either horizontal or vertical or any angle in between

FACTORY ASSEMBLED AND SHIPPED
Ready for installation

DIRECT GAS-FIRED Door Heater

STANDARD FEATURES

- Electronic Flame Safeguard with LED Status Indicating Lights
- Magnetic Starter
- Control Transformer
- Ignition Transformer
- Sparktrode
- Interrupted Pilot
- Main Fuel Safety Valve
- High Temperature Limit Switch
- Remote Station for Floor Mounting with Status Indicating Lights and Summer/Off/Winter Selector Switch
- Door Switch
- Air Flow Switch
- Inlet Guard
- 12 Ga. Hot Rolled Steel Housing
- Finish is Air-Dry Alkyd Enamel Applied over Phosphatized Steel

Door heaters are designed for heating open doorways only, not recommended for doors with dock seals or for general-purpose plant heating.

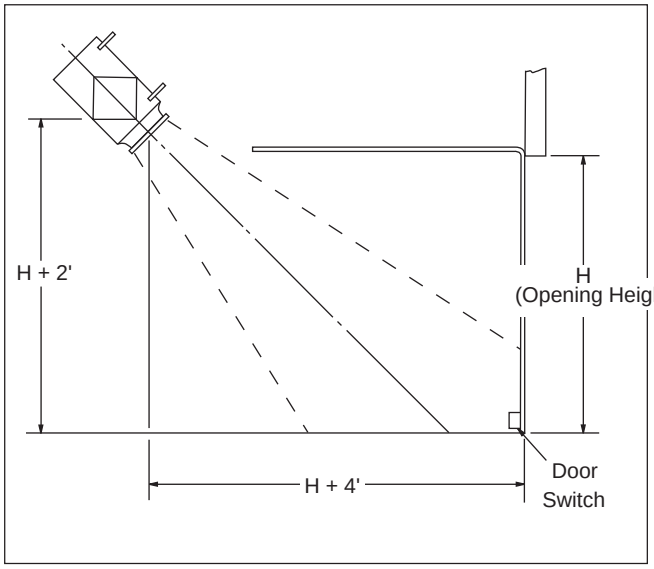
NOTE" Based on Natural Gas Specify Gravity 0.6, 1000 BTU per cu. ft.

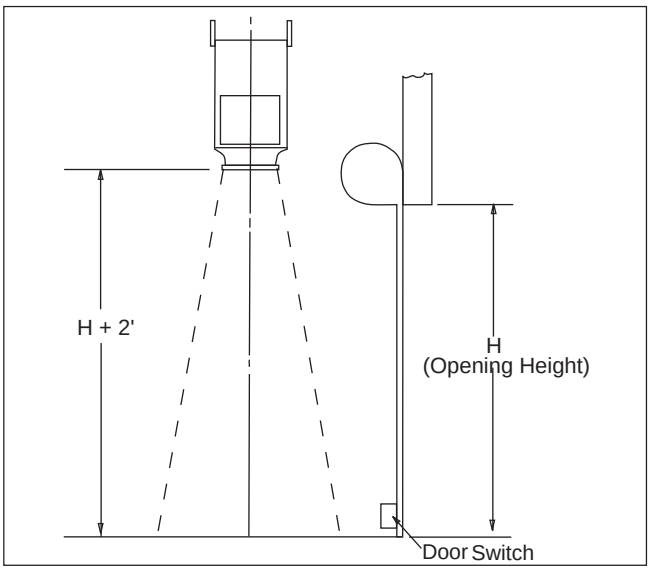
Overhead Door

Mounted at a 45º or 30º angle, the Berner Automatic Door Heater directs a flow of hot air to the floor area just inside the doorway. The door switch turns on the heater when the door is opened.



Roll Top Door

Alternate vertical mounting of the Berner Automatic Door Heater may also be used with roll top or straight lift doors, directing a flow of hot air to the floor just inside the door opening.



NOTE: It is recommended the door switch be mounted 24" from floor level.
